RE: O6YUTS-708J Class II Permissive Change Request

This permissive change request reports the addition of Band F to the original granted application. The frequency 1893.65 MHz is now the lowest available frequency, and is added from previous testing as a firmware programming modification; no change to the power or layout was made.

The power stated within this Class II permissive change request is EIRP, in order to maintain consistency with the original grant.

Sincerely,

Desmond A. Fraser, President
Rhein Tech Laboratories
