Please refer to another test report, which was issued by another test lab.

2. GENERAL INFORMATION

2.1 Product Description

The Humax Co., Ltd., Model SV2 (referred to as the EUT in this report) is SATELLITE RADIO RECIVER that has the FM transmitter from 88.1 MHz to 107.9 MHz for audio signal of FM radio receiver. And the EUT has an external FM antenna. Product specification described herein was obtained from product data sheet or user's manual.

2.2 Model Differences

-. The difference(s) compared to the EUT is as follows: None

2.3 Related Submittal(s) / Grant(s)

-. Original submittal only

2.4 Test System Details

The model numbers for all the equipments which were used in the tested system is:

-	-	N/A	Car Battery	EUT
-	-	N/A	Satellite Antenna	EUT
-	-	N/A	External FM Antenna	EUT

2.5 Test Methodology

The radiated testing was performed according to the procedures in chapter 7, 13 of ANSI C63.4: 2003 and performed at a distance of 3 meters from EUT to the antenna.

2.6 Test Facility

The open area test site and conducted measurement facilities are located on at 426-1 Daessangryung-Ri, Chowol-Eup, Kwangju-City, Kyunggi-Do, 464-080, Korea. Description details of test facilities were submitted to the Commission on April 04, 2003. (Registration Number: 340658)

3. SYSTEM TEST CONFIGURATION

3.1 Justification

This device was configured for testing in a typical way as a normal customer is supposed to be used. During the test, the following components were installed inside of the EUT.

DEVICE TYPE	MANUFACTURER	MODEL/PART NUMBER	FCC ID
MAIN B/D	Humax Co., Ltd.	SV2 MAIN B/D REV:1.0	N/A

3.2 EUT exercise Software

The Model, SV2 is included a FM transmitter designed to operate on function in the 88.1 ~ 107.9 MHz. The EUT does not have an audio input port, so the internal 1 kHz modulation signal was transmitted with maximum audio level. Also the EUT can be operated with and without External FM transmitting antenna, so the test was performed at each configuration, but the worst test data were recorded in this report.

For setting maximum emission from the EUT, the configuration test setup was changed 4 times. Please refer to test setup photo. The emission for carrier frequency was recoded at each configuration but other spurious emissions were recoded at the worst case only.

3.6 Configuration of Test System

Line Conducted Test: It needs not to test this requirement, because the power of the EUT supplies from a car battery.

Radiated Emission Test: Preliminary radiated emissions test were conducted using the procedure in ANSI C63.4: 2003 8.3.1.1 and 13.1.4.1 to determine the worse operating conditions. Final radiated emission tests were conducted at 3 meter open area test site.

Occupied Bandwidth Measurement:

This measurement is performed with the antenna located close enough to give a full-scale deflection of the modulated carrier on the spectrum analyzer.

In situ Radiated Emission Test:

According to the FCC Policy, the EUT shall be installed in small, medium, and large size vehicles because of external antenna on the EUT.

3.7 Antenna Requirement

For intentional device, according to section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

Antenna Construction:

The external FM antenna which shall be supplied by the responsible party shall be used according to user's guide.

Used External Transmitting FM Antenna Construction
