Abstract

This report has been prepared on behalf of Pelican Accessories, Inc. to support the attached Application for Equipment Authorization. The test report and application are submitted for an Intentional Radiator under Part 15.249 of the FCC Rules and Regulations. This Federal Communication Commission (FCC) Certification Test Report documents the test configuration and test results for a Pelican Accessories, Inc. Predator Wireless PS-2 Dongle “Controller Host”.

Testing was performed on an Open Area Test Site (OATS) of Washington Laboratories, Ltd, 7560 Lindbergh Drive, Gaithersburg, MD 20879. Site description and site attenuation data have been placed on file with the FCC's Sampling and Measurements Branch at the FCC laboratory in Columbia, MD. Washington Laboratories, Ltd. has been accepted by the FCC and approved by NIST NVLAP (NVLAP Lab Code: 200066-0) as an independent FCC test laboratory.

The Pelican Accessories, Inc. Predator Wireless PS-2 Controller complies with the limits for an Intentional Radiator device under Part 15.249 of the FCC Rules and Regulations.

1 Introduction

1.1 Compliance Statement

The Pelican Accessories, Inc. Predator Wireless PS-2 Dongle complies with the limits for an Intentional Radiator device under Part 15.249 of the FCC Rules and Regulations.

This test report reflects the testing performed for the certification of the Wireless PS-2 Dongle. Separate testing was performed for the digital and receiver portion under the DoC process.

1.2 Test Scope

Tests for radiated and conducted emissions were performed. All measurements were performed according to the 2003 version of ANSI C63.4. The measurement equipment conforms to ANSI C63.2 Specifications for Electromagnetic Noise and Field Strength Instrumentation.

1.3 Contract Information

Customer: Pelican Accessories, Inc.
1840 East 27th Street
Vernon, CA 90058

WLL Quotation Number: 62459

1.4 Test Dates

Testing was performed from June 22nd to June 24th, 2005.

1.5 Test and Support Personnel

Washington Laboratories, LTD Greg Snyder, James Ritter

2 Equipment Under Test

2.1 EUT Identification & Description

The Pelican Accessories, Inc. Predator Wireless PS-2 Dongle (“Controller Host”) is part of the wireless Controller system for the PS-2 video game console. It replaces the hard-wired Controller interface to the PS-2 box, and transmits play commands (rumble data) to the Pelican Wireless Controller Pad (separate certification, FCC ID: 07X-PRED-S1). The RF Controller Host is powered from the video game console and operates in the 2400M – 2483.5MHz band.

Table 1. Device Summary

ITEM	DESCRIPTION
Manufacturer:	Pelican Accessories, Inc.
FCC ID Number	07X-PRED-S2
EUT Name:	Predator
Model:	Wireless PS-2 Dongle (Host)
FCC Rule Parts:	§15.249
Frequency Range:	2407M – 2470MHz
Maximum Output Power:	<1mW
Modulation:	FSK
Occupied Bandwidth:	1.53MHz
Keying:	Automatic
Type of Information:	Control
Power Output Level	Fixed
Antenna Type	Integral
Interface Cables:	N/A
Power Source & Voltage:	120Vdc via game console

2.2 Test Configuration

The Predator Host was connected to a PS-2 console and configured with the Wireless Controller Pad. The PS-2 game console was powered via 120Vac and the output was connected to a television.

2.3 Testing Algorithm

The Predator Wireless Controller host transmits “rumble” data to the Wireless Controller pad when commanded by the game console. The system was configured for normal game play with the Wireless Controller pad continuously sending data to the host so that the transmit of the host would be continuous.

Worst case emission levels are provided in the test results data.

2.4 Test Location

All measurements herein were performed at Washington Laboratories, Ltd. test center in Gaithersburg, MD. Site description and site attenuation data have been placed on file with the FCC's Sampling and Measurements Branch at the FCC laboratory in Columbia, MD. Washington Laboratories, Ltd. has been accepted by the FCC and approved by NIST NVLAP (NVLAP Lab Code: 200066-0) as an independent FCC test laboratory.

2.5 Measurements

2.5.1 References

ANSI C63.2 Specifications for Electromagnetic Noise and Field Strength Instrumentation

ANSI C63.4 American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz

Land Mobile FM or PM Communications Equipment Measurement and Performance Standards (ANSI/TIA/EIA-603-93)

2.6 Measurement Uncertainty

All results reported herein relate only to the equipment tested. For the purposes of the measurements performed by Washington Laboratories, the measurement uncertainty is ± 2.3 dB. This has been calculated for a *worst-case situation* (radiated emissions measurements performed on an open area test site).

The following measurement uncertainty calculation is provided:

$$\text{Total Uncertainty} = (A^2 + B^2 + C^2)^{1/2}/(n-1)$$

where:

A = Antenna calibration uncertainty, in dB = 2 dB

B = Spectrum Analyzer uncertainty, in dB = 1 dB

C = Site uncertainty, in dB = 4 dB

n = number of factors in uncertainty calculation = 3

Thus, Total Uncertainty = $0.5 (2^2 + 1^2 + 4^2)^{1/2} = \pm 2.3$ dB.

3 Test Equipment

Table 2 shows a list of the test equipment used for measurements along with the calibration information.

Table 2: Test Equipment List

Equipment	WLL Asset #	Calibration Due
Hewlett-Packard 8568B Spectrum Analyzer	0073	7/08/05
Hewlett-Packard 85650A Quasi-Peak Adapter	0069	7/08/05
Hewlett-Packard 85685A RF Preselector	0071	7/08/05
Hewlett-Packard 8593A Spectrum Analyzer	0074	8/17/05
Hewlett-Packard 8449B Microwave Preamp	0312	9/29/05
ARA LPB-2520 BiconiLog Antenna	0007	9/14/05
ARA DRG118/A Microwave Horn Antenna	0425	6/30/06
Narda V638 Horn Antenna	0210	12/25/08

4 Test Results

4.1 Occupied Bandwidth: (FCC Part §2.1049)

Occupied bandwidth was performed by coupling the output of the EUT to the input of a spectrum analyzer. As the antenna is integral to the device a receive antenna was placed in close proximity of the controller pad.

At full modulation, the occupied bandwidth was measured as shown:

Figure 1. Occupied Bandwidth, Low Channel

Figure 2. Occupied Bandwidth, Mid Channel

Figure 3. Occupied Bandwidth, High Channel

Table 3 provides a summary of the Occupied Bandwidth Results.

Table 3. Occupied Bandwidth Results

Frequency	Bandwidth
Low Channel 2407MHz	1.31MHz
Mid Channel 2438MHz	1.53MHz
High Channel 2470MHz	1.14MHz

4.2 Radiated Emissions: (FCC Part §2.1053)

The EUT must comply with the radiated emission limits of 15.249(a). The limits are as shown in the following table.

Table 4. Radiated Emissions Limits

Fundamental Frequency	Field Strength of Fundamental (μV/m)	Field Strength of Harmonics (μV/m)
902 – 928 MHz	50,000	500
2400 – 2483.5 MHz	50,000	500
5725 – 5875 MHz	50,000	500
24.00 – 24.25 GHz	250,000	2500

4.2.1 Test Procedure

The EUT was placed on motorized turntable for radiated testing on a 3-meter open field test site. The emissions from the EUT were measured continuously at every azimuth by rotating the turntable. Receiving antennas were mounted on an antenna mast to determine the height of maximum emissions. The height of the antenna was varied between 1 and 4 meters. The peripherals were placed on the table in accordance with ANSI C63.4-2003. Cables were varied in position to produce maximum emissions. Both the horizontal and vertical field components were measured.

The emissions were measured using the following resolution bandwidths:

Frequency Range	Resolution Bandwidth	Video Bandwidth
30MHz-1000 MHz	100kHz	>100kHz
>1000 MHz	1 MHz	1MHz (peak)

Emissions were measured to the 10th harmonic of the transmit frequency. Worst case emission levels are reported.

The following is a sample calculation used in the data tables for calculating the final field strength of spurious emissions and comparing these levels to the specified limits.

Sample Calculation:

Spectrum Analyzer Voltage (SA Level):	V dBμV
Antenna Factor (Ant Corr):	AFdB/m
Cable Loss Correction (Cable Corr):	CCdB
Duty Cycle Correction (Average)	DCCdB (if applicable)
Amplifier Gain:	GdB
Electric Field (Corr Level):	EdBμV/m = VdBμV + AFdB/m + CCdB + DCCdB - GdB

Note: NF = Noise floor/no detectable emissions.
All emissions are peak unless noted in notes column.

4.3 Conducted Emissions (AC Power Line)

The EUT was placed on an 80 cm high 1 x 1.5 m non-conductive table above a ground plane. Power to the EUT was provided through a Solar Corporation 50 Ω /50 μ H Line Impedance Stabilization Network bonded to a 3 x 2 meter ground plane. The LISN has its AC input supplied from a filtered AC power source. Power and data cables were moved about to obtain maximum emissions.

The 50 Ω output of the LISN was connected to the input of the spectrum analyzer and the emissions in the frequency range of 150 kHz to 30 MHz were measured. The detector function was set to quasi-peak or peak, as appropriate, and the resolution bandwidth during testing was at least 9 kHz, with all post-detector filtering no less than 10 times the resolution bandwidth.

AC Power Line conducted emissions test data are included in Table 9.

Table 9: AC Power Line Conducted Emissions Test Data Sheet

CLIENT: Electrosources
MODEL: Predator Dongle System
TESTER: Adam Black

DATE: 6/22/2005
JOB #: 8830

TEST SITE: CSITE1_CE
TEST VOLTAGE: 120 VAC

TEST STANDARD: FCC Part 15
CLASS: FCC_B

LINE 1 - NEUTRAL
