ELECTROMAGNETIC EMISSION TEST REPORT

ACCORDING TO 47CFR PART 15, SUBPART C § 15.209, 15.205 and SUBPART B
for

Given Imaging Ltd.

EQUIPMENT UNDER TEST:

Patency scanner

Brand name: M2A

Model: PS1

This report is in conformity with and ISO/IEC 17025. The A2LA logo endorsement applies only to the test methods and the standards that are listed in the scope of Hermon Laboratories accreditation. The test results relate only to the items tested. **This test report must not be reproduced in any form except in full with the approval of Hermon Laboratories Ltd.**

2 Summary of tests

The tests listed in the table below were performed. The EUT was found complying with the limits of 47CFR Part 15, §15.209, 15.205 and subpart B.

Parameter	Subclause	C	NC	NT	NA	Tested by	Date tested	Remarks
Intentional radiation, §15.209								
Field strength of emission	(a)	C				Mr. M. Feldman, test engineer	December 3, 23, 2002	
Unintentional radiation, §15.107, §15.109								
Conducted emissions	15.107				NA			
Radiated emissions	15.109	C				Mr. M. Feldman, test engineer	December 4, 2002	
NOTE: C: The parameter is compliant with the requirements. NC: The parameter is not compliant with the requirements. NT: The parameter is not tested. NA: The test of this parameter is not applicable.								

Parameter	Subclause	C	NC	NT	NA	Remarks
General conditions under Part 15						
The Intentional radiator operates at 128 kHz.	15.209	C				
The intentional radiator does not operate in the restricted bands of operation.	15.205	C				
The intentional radiator has permanently attached antenna or antenna that uses a unique coupling to the intentional radiator.	15.203	C				
The intentional radiator has a standard connector and must be professionally installed. To demonstrate that professional installation is required, the following three points must be addressed: (a) the application (or intended use) of the EUT; (b) the installation requirements of the EUT, and (c) the method by which the EUT will be marketed.	15.203				NA	
No antenna other than that furnished by the responsible party can be used with the device.	15.203				NA

3 EUT description

3.1 General description

The hand-held scanner is used for detecting a tag inside a human body by transmitting and receiving the retransmitted RF signals from the tag.

The device transmits at 126 kHz, receives signals at 64 kHz and is powered from eight light 1.5 V batteries.

3.2 EUT test configuration

The EUT test configuration is shown in Figure 3.2.1.

88 - 216	43.5	3
216 - 960	46.0	3
Above 960*	54.0	3

* F is frequency in kHz.

**The limit for 6 m distance was calculated using the distance extrapolation factor (DEF) as follows:

$\text{Lim}S_2 = \text{Lim} S_1 + \text{DEF} \times \log (S_1/S_2)$, where $S_1 = 300$ m, $S_2 = 6$ m.

The DEF was calculated for 3 pairs of distances (15 and 10 m, 10 and 6 m, 6 and 3 m) as follows:

$\text{DEF} = (E_2 - E_1) / \log (d_2/d_1)$, where E_i is the field strength at distance d_i .

The worst case result was 52.48 dB/decade.

At 125.9 kHz frequency the limit was calculated, using DEF= 52 dB/decade:

$\text{Lim}_{3m} = 67.60 - 20 \log 125.9 + 52 \log (300/6) = 114.0 \text{ dB}(\mu\text{V/m})$

TEST PROCEDURE

The EUT was tested, being placed on a wooden 80 cm height table in each of three orthogonal planes in turn.

The loop antenna was positioned with its plane horizontal. The loop center was 1 meter above the ground plane. To find maximum radiation the turntable was rotated 360°. Then the loop position was changed to vertical. To find maximum radiation the turntable was rotated 360° and the measuring antenna was rotated about its vertical axis.

4.3 Unintentional radiated emissions test according to §15.109

Test facility description

Tests were performed at Hermon Laboratories Ltd., which is a fully independent, private EMC, Safety and Telecommunication testing facility. Hermon Laboratories is listed by the Federal Communications Commission (USA) for all parts of Code of Federal Regulations 47 (CFR 47) and by Industry Canada for electromagnetic emissions (file numbers IC 2186-1 for OATS and IC 2186-2 for anechoic chamber), certified by VCCI, Japan (the registration numbers are R-808 for OATS, R-1082 for anechoic chamber, C-845 for conducted emissions site), assessed by TNO Certification EP&S (Netherlands) for a number of EMC, Telecommunications, Safety standards, and by AMTAC (UK) for safety of Medical Devices. The laboratory is accredited by American Association for Laboratory Accreditation (USA) according to ISO/IEC 17025 for Electromagnetic Compatibility, Product Safety, Telecommunications Testing and Environmental Simulation (for exact scope please refer to Certificate No. 839.01).
