Overview

This document defines and specifies the WISMO QUIK Q2686, available under two GSM/GPRS Class 10 quad-band versions:

- Q2686: EGSM/GPRS 900/1800/850/1900 MHz version with 32 Mb of Bursted Flash memory and 8 Mb of SRAM (32/8)

1.2 List of abbreviations

Abbreviation	Definition
AC	Alternative Current
ADC	Analog to Digital Converter
A/D	Analog to Digital conversion
AF	Audio-Frequency
AT	ATtention (prefix for modem commands)
AUX	AUXiliary
CAN	Controller Area Network
CB	Cell Broadcast
CEP	Circular Error Probable
CLK	CLock
CMOS	Complementary Metal Oxide Semiconductor
CS	Coding Scheme
CTS	Clear To Send
DAC	Digital to Analogue Converter
dB	Decibel
DC	Direct Current
DCD	Data Carrier Detect
DCE	Data Communication Equipment
DCS	Digital Cellular System
DR	Dynamic Range
DSR	Data Set Ready
DTE	Data Terminal Equipment
DTR	Data Terminal Ready
EFR	Enhanced Full Rate
E-GSM	Extended GSM
EMC	ElectroMagnetic Compatibility
EMI	ElectroMagnetic Interference
EMS	Enhanced Message Service
EN	ENable
ESD	ElectroStatic Discharges
FIFO	First In First Out
FR	Full Rate

Abbreviation Definition

FTA	Full Type Approval
GND	GrouND
GPI	General Purpose Input
GPC	General Purpose Connector
GPIO	General Purpose Input Output
GPO	General Purpose Output
GPRS	General Packet Radio Service
GPS	Global Positioning System
GSM	Global System for Mobile communications
HR	Half Rate
I/O	Input / Output
LED	Light Emitting Diode
LNA	Low Noise Amplifier
MAX	MAXimum
MIC	MICrophone
MIN	MINimum
MMS	Multimedia Message Service
MO	Mobile Originated
MT	Mobile Terminated
na	Not Applicable
NF	Noise Factor
NMEA	National Marine Electronics Association
NOM	NOMinal
NTC	Négative Temperature Coefficient
PA	Power Amplifier
Pa	Pascal (for speaker sound pressure measurements)
PBCCH	Packet Broadcast Control CHannel
PC	Personal Computer
PCB	Printed Circuit Board
PDA	Personal Digital Assistant
PFM	Power Frequency Modulation
PSM	Phase Shift Modulation
PWM	Pulse Width Modulation
RAM	Random Access Memory
RF	Radio Frequency

Abbreviation Definition

RFI	Radio Frequency Interference
RHCP	Right Hand Circular Polarization
RI	Ring Indicator
RST	ReSeT
RTC	Real Time Clock
RTCM	Radio Technical Commission for Maritime services
RTS	Request To Send
RX	Receive
SCL	Serial CLock
SDA	Serial DAta
SIM	Subscriber Identification Wireless CPU
SMS	Short Message Service
SPI	Serial Peripheral Interface
SPL	Sound Pressure Level
SPK	SPeaKer
SRAM	Static RAM
TBC	To Be Confirmed
TDMA	Time Division Multiple Access
TP	Test Point
TVS	Transient Voltage Suppressor
TX	Transmit
TYP	TYPical
UART	Universal Asynchronous Receiver-Transmitter
USB	Universal Serial Bus
USSD	Unstructured Supplementary Services Data
VSWR	Voltage Standing Wave Ratio

2 General description

2.1 General information

WISMO Quik Q2686 is a self-contained E-GSM/GPRS 900/1800 and 850/1900 quad-band Wireless CPU including the following characteristics :

2.1.1 Overall dimensions

- Length: 40 mm
- Width: 32.2 mm
- Thickness: 4 mm

2.1.2 Environment and mechanics

- Green policy: RoHS compliant
- Complete shielding

The Q2686 Wireless CPU is compliant with RoHS (Restriction of Hazardous Substances in Electrical and Electronic Equipment) Directive 2002/95/EC which sets limits for the use of certain restricted hazardous substances. This directive states that "from 1st July 2006, new electrical and electronic equipment put on the market does not contain lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE)".

Wireless CPUs which are compliant with this directive are identified by the RoHs logo on their label.

2.1.3 GSM/GPRS Features

- 2 Watts EGSM 900/GSM 850 radio section running under 3.6 Volts
- 1 Watt GSM1800/1900 radio section running under 3.6 Volts
- Hardware GPRS class 10 capable

2.1.4 Interfaces

- Digital section running under 2.8 Volts and 1.8V.
- 3V/1V8 SIM interface
- Complete interfacing :
 - o Power supply
 - o Serial link
 - o Analogue audio
 - o PCM digital audio
 - o SIM card
 - o Keyboard

- o USB 2.0 slave
- o Serial LCD (not available with AT commands)

2.1.5 Operating system

- Real Time Clock with calendar
- Battery charger
- Echo Cancellation + noise reduction (quadri codec)
- Full GSM or GSM/GPRS Operating System stack

2.1.6 Connection interfaces

WISMO Quik Q2686 has four external connections :

- Three for RF circuit:
 - o UFL connector
 - o Soldered connection
 - o IMP connection
- One for base band signals:
 - o 100 pin I/O connector.

2.2 Functional description

The global architecture of WISMO Quik Q2686 is described below :

Figure 1 : Functional architecture

2.2.1 RF functionalities

The Radio Frequency (RF) range comply with the Phase II EGSM 900/DCS 1800 and GSM 850/PCS 1900 recommendation. The frequencies are :

	Transmit band (Tx)	Receive band (Rx)
GSM 850	824 to 849 MHz	869 to 894 MHz
E-GSM 900	880 to 915 MHz	925 to 960 MHz
DCS 1800	1710 to 1785 MHz	1805 to 1880 MHz
PCS 1900	1850 to 1910 MHz	1930 to 1990 MHz

The Radio Frequency (RF) part is based on a specific quad band chip including:

- a Digital low-IF receiver
- a Quad-band LNAs (Low Noise Amplifier)
- an Offset PLL (Phase Locked Loop) transmitter
- a Frequency synthesizer
- a Digitally controlled crystal oscillator (DCXO)
- a Tx/Rx FEM (Front-End Wireless CPU) for quad-band GSM/GPRS

2.2.2 Baseband functionalities

The digital part of the WISMO Quik Q2686 is composed of a PCF5212 PHILIPS chip. This chipset is using a 0,18 μ m CMOS mixed technology, which allows massive integration as well as low current consumption.

2.3 Operating System

WISMO Quik Q2686 is designed to integrate various types of specific process applications such as vertical applications (telemetry, multimedia, automotive...).

The Operating System offers a set of AT commands to control the Wireless CPU. With this standard Operating System, some interfaces of the Wireless CPU are not available since they are dependent on the peripheral devices connected to the Wireless CPU.

The Operating System is Open AT[®] compliant.

3 Interfaces

3.1 General Purpose Connector (GPC)

A 100-pin connector is provided to interface the WISMO Quik Q2686 with a board containing either a serial LCD Wireless CPU, a keyboard, a SIM connector, or a battery connection.

The available interfaces on the GPC are described below.

chapter	Name	Driven by OS 6.60	Not driven by OS 6.60	Driven by Open AT® V4.00	Not driven by Open AT® V4.00
3.4	Sérial Interface		X	X	
3.5	Keyboard Interface	X		X	
3.6	Main Sérial Link	X		X	
3.7	Auxiliary Sérial Link	X		X	
3.8	SIM Interface	X		X	
3.9	Général Purpose IO	X		X	
3.10	Analog to Digital Converter	X		X	
3.11	Analog audio Interface	X		X	
3.12	Buzzer Output	X		X	
3.13	Battery Charging Interface	X		X	
3.17	External Interruption	X		X	
3.18	VCC_2V8 and VCC_1V8		X		X
3.19	BAT-RTC (Backup Battery)	X		X	
3.20	FLASH-LED signal	X		X	
3.21	Digital Audio Interface (PCM)	X		X	
3.22	USB 2.0 Interface	X		X	

3.2 Power supply

3.2.1 Power supply description

The power supply is one of the key issue in the design of a GSM terminal.

Due to the bursted emission in GSM / GPRS, the power supply must be able to deliver high current peaks in a short time. During the peaks the ripple (U_{ripp}) on the supply voltage must not exceed a certain limit (see Table 1 Power supply voltage" Power Supply Voltage").

- In communication mode, a GSM/GPRS class 2 terminal emits $577\mu s$ radio bursts every 4.615ms. (See Figure 2)

Figure 2 : Power supply during burst emission

- In communication mode, a GPRS class 10 terminal emits $1154\mu s$ radio bursts every 4.615ms.

Only the VBATT power supply input is necessary to provide the Q2686 Wireless CPU.

VBATT:

- supplies directly the RF components with 3.6 V. It is essential to keep a minimum voltage ripple at this connection in order to avoid any phase error.

The RF Power Amplifier current (2.0 A peak in GSM /GPRS mode) flows with a ratio of:

- o 1/8 of the time (around $577\mu s$ every 4.615ms for GSM /GPRS cl. 2) and
- o 2/8 of the time (around $1154\mu s$ every 4.615ms for GSM /GPRS cl. 10).

The rising time is around $10\mu s$.

- is internally used to provide through several regulators, the power supply VCC_2V8 and VCC_1V8 needed for the base band signals.

The WISMO QUIK Q2686 shielding case is the grounding. The ground has to be connected on the mother board through a complete layer on the PCB.

Input power Supply Voltage

	V_{MIN}	V_{NOM}	V_{MAX}	Ripple max (U_{ripp})
VBATT ^{1,2}	3.2	3.6	4.8	10mVpp

Table 1 Power supply voltage

(1): This value has to be guaranteed during the burst (with 2.0A Peak in GSM or GPRS mode)

(2): max operating Voltage Stationary Wave Ratio (VSWR) 2:1

When supplying the Wireless CPU with a battery, the total impedance (battery+protections+PCB) should be <150 mOhms.

When the Wireless CPU is in Alarm mode, no voltage must be applied on any pin of the 100-pin connector excepted on the BAT-RTC (pin 7) for RTC operation, or ON/~OFF (pin 19) to power ON the Wireless CPU.

3.2.2 Power consumption

The power consumption is depending of the configuration used. That's why, the following consumption values are given for each modes, RF bands and software used (AT or Open AT™).

All following information are given assuming a 50 Ω RF output.

The following consumption values are given by measurement on Wireless CPU samples, at temperature of 25°C.

Three VBATT values are used to measure the consumption, VBATT_{MIN} (3.2V), VBATT_{MAX} (4.8V) and VBATT_{TYP} (3.6V).

The average current is given for the three VBATT values and the peak current given is the maximal current peak measured with the three VBATT voltages.

For more information about working mode description, see Appendix of AT Command Interface Guide OS 6.60 [4]

For more information about consumption measurement procedure, see WISMO Quik Q2686 Customer Design Guidelines [2].

3.2.2.1 Power consumption without Open AT[®] processing

The following measurement results are relevant when :

- there is no Open AT[®] application
- the Open AT[®] application is disabled
- no processing is required by the Open AT[®] application

Power consumption without Open AT [®] processing							
Working modes	parameters		I _{MIN} average VBATT=4,8V	I _{NOM} average VBATT=3,6V	I _{MAX} average VBATT=3,2V	I _{MAX} peak	unit
Alarm Mode			21	16	15		μA
Fast Idle Mode	Paging 9 (Rx burst occurrence ~2s)		15	17	18	160 _{RX}	mA
	Paging 2 (Rx burst occurrence ~0,5s)		17	18	19	160 _{RX}	mA
Slow Idle Mode ¹	Paging 9 (Rx burst occurrence ~2s)		1.5 (1.5 to 1.75)	1.6 (1.6 to 1.9)	1.7 (1.7 to 2.05)	160 _{RX}	mA
	Paging 2 (Rx burst occurrence ~0,5s)		4 (4 to 4.3)	4.4 (4.4 to 4.75)	4.6 (4.6 to 4.95)	160 _{RX}	mA
Fast Standby Mode			30	36	39		mA
Slow Standby Mode			1.4	1.4	1.5		mA
Connected Mode	850/900 MHz	PCL5 (TX power 33dBm)	210	218	222	1450 _{TX}	mA
		PCL19 (TX power 6dBm)	81	89	92	270 _{TX}	mA
	1800/1900 MHz	PCL0 (TX power 33dBm)	145	153	157	850 _{TX}	mA
		PCL19 (TX power 6dBm)	77	85	88	250 _{TX}	mA
Transfer Mode class 8 (4Rx/1Tx)	850/900 MHz	PCL3 (TX power 33dBm)	201	209	213	1450 _{TX}	mA
		PCL17 (TX power 5dBm)	78	85	88	270 _{TX}	mA
	1800/1900 MHz	PCL3 (TX power 30dBm)	138	146	149	850 _{TX}	mA
		PCL18 (TX power 0dBm)	74	81	84	250 _{TX}	mA
Transfer Mode class 10 (3Rx/2Tx)	850/900 MHz	PCL3 (TX power 33dBm)	364	372	378	1450 _{TX}	mA
		PCL17 (TX power 5dBm)	112	120	123	270 _{TX}	mA
	1800/1900 MHz	PCL3 (TX power 30dBm)	237	245	248	850 _{TX}	mA
		PCL18 (TX power 0dBm)	104	111	115	250 _{TX}	mA

TX means that the current peak is the RF transmission burst (Tx burst)

RX means that the current peak is the RF reception burst (Rx burst)

¹ The Slow Idle Mode consumption is depending of the SIM card used. Any SIM cards responses are speedier than others, more the response is long, more the consumption is high. The measurements have been preformed with many 3V SIM cards, the result under brackets are the min and the max current measured among all the SIM used.

3.2.2.2 Power consumption with Open AT® software

The Open AT™ software used is the Dhrystone application, the following consumption results are measured during the run of the Dhrystone application.

Power consumption with Dhrystone Open AT [®] application							
Working modes	parameters		I _{MIN} average VBATT=4,8V	I _{NOM} average VBATT=3,6V	I _{MAX} average VBATT=3,2V	I _{MAX} peak	unit
Alarm Mode			N/A	N/A	N/A		µA
Fast Idle Mode	Paging 9 (Rx burst occurrence ~2s)		31	38	41	160 _{RX}	mA
	Paging 2 (Rx burst occurrence ~0,5s)		32	39	42	160 _{RX}	mA
Slow Idle Mode	Paging 9 (Rx burst occurrence ~2s)		N/A	N/A	N/A	160 _{RX}	mA
	Paging 2 (Rx burst occurrence ~0,5s)		N/A	N/A	N/A	160 _{RX}	mA
Fast Standby Mode			31	38	41		mA
Slow Standby Mode			N/A	N/A	N/A		mA
Connected Mode	850/900 MHz	PCL5 (TX power 33dBm)	211	219	223	1450 _{TX}	mA
		PCL19 (TX power 6dBm)	82	90	93	270 _{TX}	mA
	1800/1900 MHz	PCL0 (TX power 33dBm)	146	154	159	850 _{TX}	mA
		PCL19 (TX power 6dBm)	78	85	89	250 _{TX}	mA
Transfer Mode class 8 (4Rx/1Tx)	850/900 MHz	PCL3 (TX power 33dBm)	202	210	214	1450 _{TX}	mA
		PCL17 (TX power 5dBm)	78	86	89	270 _{TX}	mA
	1800/1900 MHz	PCL3 (TX power 30dBm)	140	148	151	850 _{TX}	mA
		PCL18 (TX power 0dBm)	75	82	85	250 _{TX}	mA
Transfer Mode class 10 (3Rx/2Tx)	850/900 MHz	PCL3 (TX power 33dBm)	365	373	379	1450 _{TX}	mA
		PCL17 (TX power 5dBm)	113	121	125	270 _{TX}	mA
	1800/1900 MHz	PCL3 (TX power 30dBm)	239	247	250	850 _{TX}	mA
		PCL18 (TX power 0dBm)	105	113	117	250 _{TX}	mA

TX means that the current peak is the RF transmission burst (Tx burst)

RX means that the current peak is the RF reception burst (Rx burst)

3.2.2.3 Consumption waveforms samples.

The consumption waveforms are given for a EGSM900 network configuration, with an AT software running inside the Q2686/X60 Wireless CPU.

The VBATT voltage as the typical value of 3.6V.

Four significant working modes consumption waveforms are described :

- Connected Mode (PCL5 : Tx power 33dBm)
- Slow Idle mode (Paging 9)
- Fast idle mode (Paging 9)
- Transfer mode (GPRS class 10, PCL3 : Tx power 33dBm)

The following waveform provide only the form of the current, for good current values, see chapter 3.2.2.1 and 3.2.2.2.

3.2.2.3.1 Connected mode current waveform

3.2.2.3.2 Slow Idle mode current waveform

3.2.2.3.3 Fast Idle mode current waveform

3.2.2.3.4 Transfer mode Class 10 current waveform

3.2.2.4 Power supply pinout

Power Supply Pinout

Signal	Pin number
VBATT	1,2,3,4
GND	Shielding

The grounding connection is done through the shielding ⇒ the four legs have to be soldered to the ground plane.

3.3 Electrical information for digital I/O

There is three types of digital I/O on the WISMO Quik Q2686 : 2.8Volt CMOS , 1.8Volt CMOS and Open drain.

The three types are described below.

Electrical characteristics of digital I/O

2.8 Volts type (2V8)					
Parameter	I/O type	Minim.	Typ	Maxim.	Condition
Internal 2.8V power supply	VCC_2V8	2.74V	2.8V	2.86V	
Input / Output pin	V _{IL}	CMOS	-0.5V*	0.84V	
	V _{IH}	CMOS	1.96V	3.2V*	
	V _{OL}	CMOS		0.4V	I _{OL} = - 4 mA
	V _{OH}	CMOS	2.4V		I _{OH} = 4 mA
	I _{OH}			4mA	
	I _{OL}			- 4mA	

*Absolute maximum ratings

All 2.8V I/O pins don't accept input signal voltage over the maximum voltage specified above, excepting the UART1 interface which is 3.3V tolerant.

1.8 Volts type (1V8)					
Parameter	I/O type	Minim.	Typ	Maxim.	Condition
Internal 1V8 power supply	VCC_1V8	1.76V	1.8V	1.94V	
Input / Output pin	V _{IL}	CMOS	-0.5V*	0.54V	
	V _{IH}	CMOS	1.33V	2.2V*	
	V _{OL}	CMOS		0.4V	I _{OL} = - 4 mA
	V _{OH}	CMOS	1.4V		I _{OH} = 4 mA
	I _{OH}			4mA	
	I _{OL}			- 4mA	

*Absolute maximum ratings

Open drain outputs type						
Signal name	Parameter	I/O type	Minimum	Typ	Maximum	Condition
FLASH-LED	V_{OL}	Open Drain			0.4V	
	I_{OL}	Open Drain			8mA	
BUZZ-OUT	V_{OL}	Open Drain			0.4V	
	I_{OL}	Open Drain			100mA	
SDA / GPIO27 and SCL / GPIO26	V_{TOL}	Open Drain			3.3V	Tolerated voltage
	V_{IH}	Open Drain	2V			
	V_{IL}	Open Drain			0.8V	
	V_{OL}	Open Drain			0.4V	
	I_{OL}	Open Drain			3mA	

The reset state of the I/O are given in each interfaces descriptions chapter. The definition of those states are described below:

Reset state definition	
Parameter	Définition
0	Set to GND
1	Set to supply 1V8 or 2V8 depending of I/O type
Pull down	Internal pull down with ~60K resistor.
Pull up	Internal pull up with ~60K resistor to supply 1V8 or 2V8 depending of I/O type.
Z	High impedance
Undefined	Be careful, undefined mustn't be used in your application if a special state at reset is needed. Those pins can be a toggling signal during reset.

3.4 Serial interface

The WISMO Quik Q2686 can be connected to a LCD Wireless CPU driver through either two SPI bus or an I²C 2-wire interfaces.

3.4.1 SPI bus

The both SPI bus interfaces include-:

- a CLK signal,
- an I/O signal,
- an I signal
- an CS signal complying with standard SPI bus.

SPI bus characteristics:

- Master mode operation
- The SPI speed is from 101,5 Kbit/s up to 13 Mbit/s in master mode operation
- 3 or 4-wires interface
- SPI-mode configuration: 0 to 3
- 1 to 16 bits data length

3.4.1.1 SPI waveforms

Waveform of SPI transfer with 4 wires configuration in master mode 0. (Chip select is not represented).

Figure 3 : SPI Timing diagrams, Mode 0, Master, 4 wires

AC characteristics

Signal	Description	Minimum	Typ	Maximum	Unit
CLK-cycle	SPI clock frequency	0.1015		13	MHz
Data-OUT delay	Data out ready delay time			10	ns
Data-IN-setup	Data in setup time	2			ns
Data-OUT-hold	Data out hold time	2			ns

3.4.1.2 SPI configuration

Operation	Maximum Speed	SPI-Mode	Duplex	3-wire type	4-wire type
Master	13 Mb/s	0,1,2,3	Half	SPIx-CLK; SPIx-IO; ~SPIx-CS	SPIx-CLK; SPIx-IO; SPIx-I; ~SPIx-CS

For the 4-wires configuration, the SPIx-I/O is used as output only, SPIx-I is used as input only.

For the 3 wires configuration, the SPIx-I/O is used as input and output.

3.4.1.3 SPI1 bus

Pin description

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
SPI1-CLK	23	O	2V8	Z	SPI Serial Clock	GPIO28
SPI1-IO	25	I/O	2V8	Z	SPI Serial input/output	GPIO29
SPI1-I	24	I	2V8	Z	SPI Serial input	GPIO30
~SPI1-CS	22	O	2V8	Z	SPI Enable	GPIO31

For Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition refer to chapter 3.3 Electrical information for digital I/O.

3.4.1.4 SPI2 bus

Pin description

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
SPI2-CLK	26	O	2V8	Z	SPI Serial Clock	GPIO32
SPI2-IO	27	I/O	2V8	Z	SPI Serial input/output	GPIO33
SP2-I	29	I	2V8	Z	SPI Serial input	GPIO34
~SPI2-CS	28	O	2V8	Z	SPI Enable	GPIO35

See chapter "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

3.4.2 I2C bus

The I2C interface includes a clock signal (SCL) and a data signal (SDA) complying with a 100Kbit/s-standard interface (Standard mode : s-mode).

The I2C bus is always master.

The maximum speed transfer range is 400Kbit/s (Fast mode : f-mode).

For more information on the bus, see the "I2C Bus Specification Version 2.0" from PHILIPS.

3.4.2.1 I2C waveforms

Waveform of I2C bus in master mode configuration.

Figure 4 : I2C Timing diagrams, Master

AC characteristics

Signal	Description	Minimum	Typ	Maximum	Unit
SCL-freq	I ² C clock frequency	100		400	KHz
T-start	Hold time START condition	0.6			μ s
T-stop	Setup time STOP condition	0.6			μ s
T-free	Bus free time, STOP to START	1.3			μ s
T-high	High period for clock	0.6			μ s
T-data-hold	Data hold time	0		0.9	μ s
T-data-setup	Data setup time	100			ns

3.4.2.2 I²C bus pin out

Pin description

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
SCL	44	O	Open drain	Z	Serial Clock	GPIO26
SDA	46	I/O	Open drain	Z	Serial Data	GPIO27

See chapter "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

3.5 Keyboard interface

This interface provides 10 connections :

- 5 rows (ROW0 to ROW4) and
- 5 columns (COL0 to COL4).

The scanning is a digital one and the debouncing is done in the WISMO Quik Q2686.

No discrete components like R,C (Resistor, Capacitor) are needed.

Pin description of the Keyboard interface

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
ROW0	68	I/O	1V8	0	Row scan	GPIO9
ROW1	67	I/O	1V8	0	Row scan	GPIO10
ROW2	66	I/O	1V8	0	Row scan	GPIO11
ROW3	65	I/O	1V8	0	Row scan	GPIO12
ROW4	64	I/O	1V8	0	Row scan	GPIO13
COL0	59	I/O	1V8	Pull up	Column scan	GPIO4
COL1	60	I/O	1V8	Pull up	Column scan	GPIO5
COL2	61	I/O	1V8	Pull up	Column scan	GPIO6
COL3	62	I/O	1V8	Pull up	Column scan	GPIO7
COL4	63	I/O	1V8	Pull up	Column scan	GPIO8

See chapter "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

3.6 Main serial link (UART1)

A flexible 6-wire serial interface is available complying with V24 protocol signaling but not with V28 (electrical interface) due to a 2.8 Volts interface.

The signals are the follows:

- TX data (CT103/TX)
- RX data (CT104/RX)
- Request To Send (~CT105/RTS)
- Clear To Send (~CT106/CTS)
- Data Terminal Ready (~CT108-2/DTR) and
- Data Set Ready (~CT107/DSR).

The set of RS-232 signals can be required for GSM DATA services application and is generated by the general purpose I/O provided by the Q2686. The two additional signals are:

- Data Carrier Detect (~CT109/DCD) and
- Ring Indicator (CT125/RI).

Pin description of UART1 interface

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
CT103/TXD1*	71	I	2V8	Z	Transmit serial data	GPIO36
CT104/RXD1*	73	O	2V8	1	Receive serial data	GPIO37
~CT105/RTS1*	72	I	2V8	Z	Request To Send	GPIO38
~CT106/CTS1*	75	O	2V8	Z	Clear To Send	GPIO39
~CT107/DSR1*	74	O	2V8	Z	Data Set Ready	GPIO40
~CT108-2/DTR1*	76	I	2V8	Z	Data Terminal Ready	GPIO41
~CT109/DCD1 *	70	O	2V8	Undefined	Data Carrier Detect	GPIO43
~CT125/RI1 *	69	O	2V8	Undefined	Ring Indicator	GPIO42
CT102/GND*	Shielding legs		GND		Ground	

See chapter "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

*According to PC view

The rising time and falling time of the reception signals (mainly CT103) have to be less than 300 ns.

The Q2686 is designed to operate using all the serial interface signals. In particular, it is mandatory to use RTS and CTS for hardware flow control in order to avoid data corruption during transmission.

Maximum baud rate of the UART1 is 115 Kbit/s.

3.7 Auxiliary serial link (UART2)

For future applications (e.g. Bluetooth connectivity) an auxiliary serial interface (UART2) will be available on Q2686 product.

Pin description of UART2 interface

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
CT103 / TXD2*	31	I	1V8	Z	Transmit serial data	GPIO14
CT104 / RXD2*	30	O	1V8	Z	Receive serial data	GPIO15
~CT106 / CTS2*	32	O	1V8	Z	Clear To Send	GPIO16
~CT105 / RTS2*	33	I	1V8	Z	Request To Send	GPIO17

See chapter "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

* According to PC view

The Q2686 is designed to operate using all the serial interface signals. In particular, it is mandatory to use RTS and CTS for hardware flow control in order to avoid data corruption during transmission.

Maximum baud rate of the UART2 is 115 Kbit/s.

3.8 SIM interface

The Subscriber Identification Module can be directly connected to the WISMO Quik Q2686 Wireless CPU through this dedicated interface.

3.8.1 General Description

5 signals exist :

- SIM-VCC : SIM power supply.
- ~SIM-RST : reset.
- SIM-CLK : clock.
- SIM-IO : I/O port.
- SIMPRES : SIM card detect.

The SIM interface controls a 3V / 1V8 SIM. This interface is fully compliant with GSM 11.11 recommendations concerning SIM functions.

Pin description of SIM interface

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
SIM-CLK	14	O	2V9 / 1V8	0	SIM Clock	Not mux
~SIM-RST	13	O	2V9 / 1V8	0	SIM Reset	Not mux
SIM-IO	11	I/O	2V9 / 1V8	*Pull up	SIM Data	Not mux
SIM-VCC	9	O	2V9 / 1V8		SIM Power Supply	Not mux
SIMPRES	12	I	1V8	Z	SIM Card Detect	GPIO18

*SIM-IO pull up is about 10K ohm

See chapter "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

Electrical Characteristics of SIM interface

Parameter	Conditions	Minim.	Typ	Maxim.	Unit
SIM-IO V_{IH}	$I_{IH} = \pm 20\mu A$	$0.7 \times SIMVCC$			V
SIM-IO V_{IL}	$I_{IL} = 1mA$			0.4	V
$\sim$ SIM-RST, SIM-CLK V_{OH}	Source current = $20\mu A$	$0.9 \times SIMVCC$			V
SIM-IO V_{OH}	Source current = $20\mu A$	$0.8 \times SIMVCC$			
$\sim$ SIM-RST, SIM-IO, SIM-CLK V_{OL}	Sink current = $-200\mu A$			0.4	V
SIM-VCC Output Voltage	$SIMVCC = 2.9V$ $I_{VCC} = 1mA$	2.84	2.9	2.96	V
	$SIMVCC = 1.8V$ $I_{VCC} = 1mA$	1.74	1.8	1.86	V
SIM-VCC current	$VBATT = 3.6V$			10	mA
SIM-CLK Rise/Fall Time	Loaded with 30pF		20		ns
$\sim$ SIM-RST, Rise/Fall Time	Loaded with 30pF		20		ns
SIM-IO Rise/Fall Time	Loaded with 30pF		0.7	1	μs
SIM-CLK Frequency	Loaded with 30pF			3.25	MHz

Note :

When SIMPRES is used, a low to high transition means that the SIM card is inserted and a high to low transition means that the SIM card is removed.

3.9 General Purpose Input/Output

The WISMO Quik Q2686 provides up to 42 General Purpose I/O. They are used to control any external device such as a LCD or a Keyboard backlight.

All grey highlight I/O are 1V8 whereas the others are 2V8.

Pin description of GPIO

Signal	Pin number	I/O	I/O type*	Reset state	Multiplexed with
Reserved	42		Do not used*		
GPIO1	51	I/O	1V8	0	Not mux*
GPIO2	53	I/O	1V8	0	Not mux*
GPIO3	50	I/O	1V8	Z	INT0
GPIO4	59	I/O	1V8	Pull up	COL0
GPIO5	60	I/O	1V8	Pull up	COL1
GPIO6	61	I/O	1V8	Pull up	COL2
GPIO7	62	I/O	1V8	Pull up	COL3
GPIO8	63	I/O	1V8	Pull up	COL4
GPIO9	68	I/O	1V8	0	ROW0
GPIO10	67	I/O	1V8	0	ROW1
GPIO11	66	I/O	1V8	0	ROW2
GPIO12	65	I/O	1V8	0	ROW3
GPIO13	64	I/O	1V8	0	ROW4
GPIO14	31	I/O	1V8	Z	CT103 / TXD2
GPIO15	30	I/O	1V8	Z	CT104 / RXD2
GPIO16	32	I/O	1V8	Z	~CT106 / CTS2
GPIO17	33	I/O	1V8	Z	~CT105 / RTS2
GPIO18	43	I/O	1V8	Z	SIMPRES
GPIO19	45	I/O	2V8	Z	Not mux
GPIO20	48	I/O	2V8	Undefined	Not mux
GPIO21	47	I/O	2V8	Undefined	Not mux
GPIO22	57	I/O	2V8	Z	Not mux**
GPIO23	55	I/O	2V8	Z	Not mux
GPIO24	58	I/O	2V8	Z	Not mux

Signal	Pin number	I/O	I/O type*	Reset state	Multiplexed with
GPIO25	49	I/O	2V8	Z	INT1

Signal	Pin number	I/O	I/O type*	Reset state	Multiplexed with
GPIO26	44	I/O	Open drain	Z	SCL
GPIO27	46	I/O	Open drain	Z	SDA
GPIO28	23	I/O	2V8	Z	SPI1-CLK
GPIO29	25	I/O	2V8	Z	SPI1-IO
GPIO30	24	I/O	2V8	Z	SP1-I
GPIO31	22	I/O	2V8	Z	~SPI1-CS
GPIO32	26	I/O	2V8	Z	SPI2-CLK
GPIO33	27	I/O	2V8	Z	SPI2-IO
GPIO34	29	I/O	2V8	Z	SP2-I
GPIO35	28	I/O	2V8	Z	~SPI2-CS
GPIO36	71	I/O	2V8	Z	CT103 / TXD1
GPIO37	73	I/O	2V8	1	CT104 / RXD1
GPIO38	72	I/O	2V8	Z	~CT105 / RTS1
GPIO39	75	I/O	2V8	Z	~CT106 / CTS1
GPIO40	74	I/O	2V8	Z	~CT107 / DSR1
GPIO41	76	I/O	2V8	Z	~CT108-2 / DTR1
GPIO42	69	I/O	2V8	Undefined	~CT125 / RI1
GPIO43	70	I/O	2V8	Undefined	~CT109 / DCD1
GPIO44	43	I/O	2V8	Undefined	Not mux

See chapter "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

* On the Q2687/X61 product, those pins are multiplexed with the control signals of the parallel bus (parallel bus is only available on the Q2687/X61 product). If an upgrade to the Q2687/X61 is envisaged, and if the parallel bus is used, those pins will be mandatory for the parallel bus functionality.

** If a Bluetooth module is used with the Q2686 Wireless CPU, those GPIO must be reserved.

3.10 Analog to Digital Converter

Two Analog to Digital Converters inputs are provided by the WISMO Quik Q2686. Those converters are 10 bits resolution, ranging from 0 to 2V.

Pin description of ADC

Signal	Pin number	I/O	I/O type	Description
BAT-TEMP*	20	I	Analog	A/D converter
AUX-ADC	21	I	Analog	A/D converter

This input is reserved for battery charging temperature sensor, see chapter "3.13 Battery Charging interface".

Electrical Characteristics of ADC

Parameter		Min	Typ	Max	Unit
Resolution			10		bits
Sampling rate				138 ¹	S/s
Input signal range		0		2	V
Input impedance	BAT-TEMP		1M		Ω
	AUX-ADC		1M		Ω

* internally pull up to 2.8V

¹ Sampling rate only for AUX-ADC and Open AT® application.

3.11 Analogue audio interface

Two different microphone inputs and two different speakers outputs are supported.

The WISMO Quik Q2686 also includes an echo cancellation feature which allows handsfree function.

3.11.1 Microphone inputs

The MIC2 inputs already include the biasing for an electret microphone allowing an easy connection.

The MIC1 input needs to have an external biasing if an electret micro is used.

3.11.1.1 Common microphone inputs characteristics

The connection can be either differential or single-ended but using a differential connection in order to reject common mode noise and TDMA noise is strongly recommended. When using a single-ended connection, be sure to have a very good ground plane, a very good filtering as well as shielding in order to avoid any disturbance on the audio path.

The gain of MIC inputs is internally adjusted and can be tuned using an AT command.

Both can be configured in differential or single ended.

3.11.1.2 Main Microphone Inputs (MIC2)

By default, the MIC2 inputs are differential ones, but it can be configured in single ended. They already include the convenient biasing for an electret microphone. The electret microphone can be directly connected on those inputs.

AC coupling is already embedded in the Wireless CPU.

Pin description of MIC2

Signal	Pin number	I/O	I/O type	Description
MIC2P	36	I	Analog	Microphone 2 positive input
MIC2N	34	I	Analog	Microphone 2 negative input

3.11.1.3 Auxiliary Microphone Inputs (MIC1)

By default, the MIC1 inputs are single-ended but it can be configured in differential. An external biasing is needed if an electret micro is used.

AC coupling is already embedded in the Wireless CPU.

Pin description of MIC1

Signal	Pin number	I/O	I/O type	Description
MIC1P	40	I	Analog	Microphone 1 positive input
MIC1N	38	I	Analog	Microphone 1 negative input

3.11.1.4 Micro Electrical characteristics

The characteristics of the both micro inputs of the WISMO Quik Q2686 are defined in the following arrays.

MIC2 Characteristics					
Parameter		Min.	Typ	Max.	Unit
Internal Biasing	Voltage	2	2.1	2.2	V
	Output Current			1.5	mA
Impedance single ended	Internal AC coupling		100		nF
	MIC2P (MIC2N left opened)	1100	1340	1600	Ω
	MIC2P (MIC2N = GND)	900	1140	1400	Ω
	MIC2N (MIC2P left opened)	1100	1340	1600	Ω
	MIC2N (MIC2P = GND)	900	1140	1400	Ω
Input voltage	Differential Input Voltage*			346	mV _{RMS}
	Absolute maximum ratings	0		6V **	V

MIC1 Characteristics					
Parameter		Minim.	Typ	Maxim.	Unit
Internal Biasing	Voltage		N/A		V
	Output Current		N/A		A
Impedance single ended	Internal AC coupling		100		nF
	MIC1P (MIC1N left opened)	70	100	162	k Ω
	MIC1P (MIC1N = GND)	70	100	162	k Ω
	MIC1N (MIC1P left opened)	70	100	162	k Ω
	MIC1N (MIC1P = GND)	70	100	162	k Ω
Input voltage	Differential Input Voltage *			346	mV _{RMS}
	Absolute maximum ratings	0		6	V

- * The input voltage depends of the input micro gain set by AT command.
- ** Because MIC2P is internally biased, it is necessary to use a coupling capacitor to connect a audio signal provided by an active generator. Only a passive microphone can be directly connected to the MI2P and MIC2N inputs.

3.11.2 Common speaker outputs characteristics

The connection is single-ended on SPK1 and is differential or single-ended on SPK2. Using a differential connection to reject common mode noise and TDMA noise is strongly recommended. Moreover in single-ended mode, 1/2 of the power is lost. When using a single-ended connection, be sure to have a very good ground plane, a very good filtering as well as shielding in order to avoid any disturbance on the audio path.

3.11.2.1 Differential Connection

Impedance of the speaker amplifier output in differential mode is shown below:

Parameter	Typ	Unit
Z (SPK2P, SPK2N)	8	Ω

3.11.2.2 Single-ended Connection

Impedance of the speaker amplifier output in single-ended mode is shown below:

Electrical Characteristics

Parameter	Typ	Unit
Z (SPK1P, SPK1N)	16 or 32	Ω
Z (SPK2P, SPK2N)	4	Ω

3.11.3 Speaker outputs

3.11.3.1 Speaker 2 Outputs

Pin description of Speaker 2 outputs

Signal	Pin number	I/O	I/O type	Description
SPK2P	39	O	Analog	Speaker 2 positive output
SPK2N	41	O	Analog	Speaker 2 negative output

3.11.3.2 Speaker 1 Outputs

Pin description of Speaker 1 outputs

Signal	Pin number	I/O	I/O type	Description
SPK1P	35	O	Analog	Speaker 1 positive output
SPK1N	37	O	Analog	Speaker 1 negative output

3.11.3.3 Speakers Outputs Power

The both speakers maximum power output are not similar, that's due to the different configuration between the Speaker1 which is only single ended and the speaker2 which can be differential, so speaker2 can provides more power.

The maximal specifications given below are available with the maximum power output configuration values set by an AT command.

Speaker1 single ended SPK1P output Characteristics					
Parameter		Minim.	Typ	Maxim.	Unit
Output Biasing	Voltage		1.20		V
Output Voltage		0		2.75	V _{PP}
Output Power	Single ended with load of 32 ohm			27	mW
Output Current	Maximum tolerated			85	mA

Only SPK1P can be used.

Speaker2 deferential output Characteristics					
Parameter		Minim.	Typ	Maxim.	Unit
Output Biasing	Voltage SPK2P and SPK2N		1.20		V
Output Voltage	Voltage on SPK2P	0		0.9	V _{PP}
	Voltage on SPK2N	0		0.9	V _{PP}
	Diff voltage (SPK2P – SPK2N)	0		1.8	V _{PP}
Output Power	Differential with load of 8 ohm			48	mW
Output Current	Maximum tolerated			110	mA

If a singled ended solution is used with the speaker2 output, only one of the both SPK2 has to be chosen. The result is an maximal output power divided by 2.

3.12 Buzzer Output

This output is controlled by a pulse wide modulation controller and can be used only as buzzer.

The BUZZ-OUT is an open drain one. A buzzer can be directly connected between this output and VBATT. The maximum current is 100 mA (PEAK).

Pin description of PWM/Buzzer output

Signal	Pin number	I/O	I/O type	Reset state	Description
BUZZ-OUT	15	O	Open drain	Z	Buzzer output

See chapter "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

Electrical Characteristics

Parameter	Condition	Minimum	Maximum	Unit
$V_{OL\ on}$	$I_{ol} = 100mA$		0.4	V
I_{PEAK}	$VBATT = VBATTmax$		100	mA
Frequency		1	50000	Hz

3.13 Battery charging interface

The WISMO Quik Q2686 Wireless CPU supports one battery charging circuit, 2 algorithms and one hardware charging mode (Pré-charging) for 3 batteries technologies:

- Ni-Cd (Nickel-Cadmium) with algorithm 0
- Ni-Mh (Nickel-Métal Hydrure) with algorithm 0
- Li-Ion (Lithium-Ion) with algorithm 1

The two algorithms control a switch, which connects the CHG-IN signal to the VBATT signal. The algorithm controls the frequency and the connected time of the switching. During the charging procedure the battery charging level is controled and when Li-Ion algorithm is used, the battery temperature is monitoring thorough the BAT-TEMP ADC input.

One more charging procedure is provided by the Q2686 Wireless CPU. It's called "Pre-charging" mode, but it's a special charging mode because it is activated only when the Wireless CPU is OFF. So the control is only performed by the hardware. The goal of this charging mode is to prevent the battery to be damaged by preventing the discharged under the minimum battery level.

3.13.1 Ni-Cd / Ni-Mh Charging algorithm

To charge the battery, the algorithm measures the battery level when the switch is opened T2 and charges the battery by closing the switch T3. When the battery is charged (battery voltage reached BattLevelMax) the switch is opened during the time T3.

Figure 5 : Ni-Cd / Ni-Mh charging waveform

Electrical Characteristics of Ni-Cd / Ni-Mh battery timing charge

Parameter	Min	Typ	Max	Unit
T1		1		s
T2		0.1		s
T3		5		s

Note : T1,T2,T3 and BattLevelMax can be configured by AT command.

The battery level is monitoring by the software but not the temperature.

3.13.2 Li-Ion Charging algorithm

The LI-Ion algorithm, provides the temperature monitoring of the battery which is highly recommended to prevent the damage of battery during the charging phase.

The Li-Ion charger algorithm can be decomposed in 3 phases :

1. Constant charge
2. Beginning of pulse charge
3. End of pulse charge

The three phases can be seen on the following waveform of a complete charge:

Figure 6 : Li-Ion full charging waveform

Electrical Characteristics of Li-Ion battery timing charge

Parameter		Min	Typ	Max	Unit
Step 1 switching	Closed		always		s
Step 2 switching	Opened		0.1		s
	Closed		1		s
Step 3 switching	Opened	0.1		10	s
	Closed		1		s

3.13.3 Pré-Charging hardware controlled

One more charging mode is existing, but it's not software controlled, it's the Pre-charging mode. This mode is only controlled by hardware. This mode is only activated when the Wireless CPU is OFF and when the VBATT is in this voltage range : $2.8V < VBATT < 3.2V$. Of course, the charger power supply has to be plugged on the CHG-IN (pin 6,8). During the Pré-charging mode the battery is charged with a direct current of 50mA. The FLASH-LED blinks when this mode is activated.

This mode is not a real charging mode, because it not possible to have a full charge with it, but it is useful to safe the battery life by preventing the battery to be discharge under the low limit voltage value.

3.13.4 Temperature monitoring

The monitoring of the temperature is only available for the Li-Ion battery with the algorithm number 1. The BAT-TEMP (pin 20) ADC input must be used to sample the temperature analog signal provided by a NTC temperature sensor. The minimum an maximum temperature range can be set by AT command.

Pin description of battery charging interface

Signal	Pin number	I/O	I/O type	Description
CHG-IN	6,8	I	Analog	Current source input
BAT-TEMP	20	I	Analog	A/D converter

Electrical Characteristics of battery charging interface

Parameter		Minimum	Typ	Maximum	Unit
Charging Operating temperature		0		50	°C
BAT-TEMP (pin 20)	resolution		10		bits
	sampling rate		216		S/s
	Input Impedance (R)		1M		Ω
	Input signal range	0		2	V
CHG-IN (pin 6, 8)	Voltage (for I=Imax)	4.6*			V
	Voltage (for I=0)			6*	V
	Current Imax			800	mA

* To be parameterized as per battery manufacturer

3.14 ON / ~OFF signal

This input is used to switch ON or OFF the WISMO Quik Q2686 Wireless CPU.

A high level signal has to be provided on the pin ON/~OFF to switch ON the Wireless CPU. The voltage of this signal has to be maintained during a minimum of 1000ms. This signal can be left at high level until switch off.

To switch OFF the Wireless CPU, the pin ON/OFF has to be released. The Wireless CPU can be switched off through the Operating System.

3.14.1 Operating sequences

3.14.1.1 Power ON

Once the Wireless CPU supplied, the application must set the ON/OFF signal to high to start the Wireless CPU power ON sequence. The ON/OFF signal must be hold for 2000ms minimum. After this time, an internal mechanism keeps it on hold. During the power ON sequence, an internal reset is automatically performed by the Wireless CPU for 40ms (typical). During this phase, any external reset should be avoided. Once the initialization is complete (timing is SIM and network dependent) the AT interface answers « OK » to the application. For further details, please check the AT commands Interface Guide.

Figure 7 : Power-ON sequence (no PIN code activated)

3.14.1.2 Power OFF

To properly power OFF the Wireless CPU, the application must set the ON/OFF signal to low and then send the AT+CPOF command to deregister from the network and switch off the Wireless CPU. Once the « OK » response is issued by the Wireless CPU, the power supply can be switched off.

I_{BB+RF} = overall current consumption (Base Band + RF part)

Figure 8 : Power-OFF sequence

Pin description

Signal	Pin number	I/O	I/O type	Description
ON/~OFF	19	I	CMOS	Wireless CPU Power ON

Electrical Characteristics of the signal

Parameter	I/O type	Minimum	Maximum	Unit
V_{IL}	CMOS		$VBATT \times 0.2$	V
V_{IH}	CMOS	$VBATT \times 0.8$	$VBATT$	V

3.15 BOOT signal

A specific control pin BOOT is available to download the WISMO Quik Q2686 Wireless CPU only if the standard XMODEM download, controlled with AT command, is not possible.

A specific PC software, provided by WAVECOM, is needed to performed this specific download.

The BOOT pin must be connected to the VCC_1V8 for this specific download.

Operating mode description

BOOT	Operating mode	Comment
Leave open	Normal use	No download
Leave open	Download XMODEM	AT command for Download AT+WDWL
1	Download specific	Need WAVECOM PC software

For more information, see Q2686 / OS 6.60 AT Command Interface Guide.

This BOOT pin must be leave open for normal use or XMODEM download.

However, in order to make development and maintenance phases easier, it is **highly recommended** to set a test point, either a jumper or a switch to VCC_1V8 (pin 5) power supply.

Pin description

Signal	Pin number	I/O	I/O type	Description
BOOT	16	I	1V8	Download mode selection

3.16 Reset signal (~RESET)

This signal is used to force a reset procedure by providing low level during at least 200 μ s. This signal has to be considered as an emergency reset only. A reset procedure is already driven by an internal hardware during the power-up sequence.

This signal can also be used to provide a reset to an external device (at power up only). If no external reset is necessary this input can be left open. If used (emergency reset), it has to be driven by an open collector or an open drain.

The Wireless CPU remains in reset mode as long as the ~RESET signal is held low.

CAUTION: This signal should be used only for "emergency" resets.

An Operating System reset will be preferred to an hardware reset.

Reset sequence :

To activate the « emergency » reset sequence, the ~RESET signal has to be set to low for 200 μ s minimum. As soon as the reset is complete, the AT interface answers « OK » to the application.

Figure 9 : Reset sequence waveform

At power up, the ~RESET time (R_t), is performed after switching ON the Wireless CPU. It is generated by internal WISMO Quik Q2686 voltage supervisor.

The ~RESET time is provided by the internal RC component. To keep the same time, it's not recommended to plug an other R or C component on the ~RESET signal. Only a switch or an open drain gate is recommended.

The Ct time is the cancellation time needed for the wireless CPU Q2686 initialization. Ct time is automatically done by the Q2686 Wireless CPU after a hardware reset.

Electrical Characteristics of the signal

Parameter	Minimum	Typ	Maxomum	Unit
Input Impedance (R)*		330K		Ω
Input Impedance (C)		10n		F
~RESET time (Rt) ¹	200			μ s
~RESET time (Rt) ² at power up only	20	40	100	ms
Cancellation time (Ct)		34		ms
V _H	0.57			V
V _{IL}	0		0.57	V
V _{IH}	1.33			V

* internal pull up

* V_H: Hysterisis Voltage

1 This reset time is the minimum to be performed on the ~RESET signal when the power supply is already stabilized.

2 This reset time is internally performed by the power supply supervisor of the Wireless CPU , only when the Wireless CPU power supplies are powered ON.

Pin description

Signal	Pin number	I/O	I/O type	Description
~RESET	18	I/O Open Drain	1V8	Wireless CPU Reset

3.17 External Interrupt

The WISMO Quik Q2686 provides two external interrupts inputs. Those interrupt input can be activated on :

- high to low edge
- low to high edge
- low to high and high to low edge
- low level
- high level

When used, interruptions input must not be left opened.

If not used, they have to be configured as GPIO.

Pin description

Signal	Pin number	I/O	I/O type	Reset state	Description	Multiplexed with
INT1	49	I	2V8	Z	External Interrupt	GPIO25
INT0	50	I	1V8	Z	External Interrupt	GPIO3

See chapter "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

Electrical characteristics of the signals

Parameter		Minimum	Maximum	Unit
INT1	V_{IL}		0.84	V
	V_{IH}	1.96		V
INT0	V_{IL}		0.54	V
	V_{IH}	1.33		V

3.18 VCC_2V8 and VCC_1V8 output

Those outputs can be used only for pull-up resistor. VCC_2V8 and VCC_1V8 have to be used as a reference supply. Those voltages supplies are available when the Wireless CPU is on.

Pin description

Signal	Pin number	I/O	I/O type	Description
VCC_2V8	10	O	Supply	Digital supply
VCC_1V8	5	O	Supply	Digital supply

Electrical characteristics of the signals

Parameter		Minimum	Typ	Maximum	Unit
VCC_2V8	Output voltage	2.74	2.8	2.86	V
	Output Current			15	mA
VCC_1V8	Output voltage	1.76	1.8	1.94	V
	Output Current			15	mA

3.19 BAT-RTC (Backup Battery)

The WISMO Quik Q2686 provides an input / output to connect a Real Time Clock power supply.

3.19.1 Interface description

This pin is used as a back-up power supply for the internal Real Time Clock. The RTC is supported by the Wireless CPU when VBATT is available but a back-up power supply is needed to save date and hour when the VBATT is switched off (VBATT = 0V).

Figure 10 : Real Time Clock power supply

If the RTC is not used this pin can be left open.

If the VBATT is available, the back-up battery can be charged by the internal 2.5V power supply regulator.

Pin description

Signal	Pin number	I/O	I/O type	Description
BAT-RTC	7	I/O	Supply	RTC Back-up supply

Electrical characteristics of the signal

Parameter	Minimum	Typ	Maximum	Unit
Input voltage	1.85		2.5	V
Input current consumption*		3.3		μ A
Output voltage		2.45		V
Output current			2	mA

*Provided by a RTC back-up battery when Wireless CPU power supply are off (VBATT = 0V).

3.20 FLASH-LED signal

FLASH LED is an open drain output. A LED and a resistor can be directly connected between this output and VBATT.

When the Q2686 Wireless CPU is OFF, if $2.8V < VBATT < 3.2V$ and a charger is connected on CHG-IN inputs, this output indicates, by flashing (100 ms ON, 900 ms OFF) , the pre-charging phase of the battery.

When the Q2686 Wireless CPU is ON, this output is used to indicate the network status.

FLASH-LED status

Q2686 state	VBATT status	FLASH-LED status	WISMO Quik Q2686 status
Wireless CPU OFF	$VBATT < 2.8V$ or $VBATT > 3.2V$	OFF	Wireless CPU is OFF
	$2.8V < VBATT < 3.2V$	Pré-charge flash LED ON for 100 ms, OFF for 900 ms	Wireless CPU is OFF, Pre-charging mode (charger must be connected on CHG-IN to activate this mode)
Wireless CPU ON	$VBATT > 3.2V$	Permanent	Wireless CPU switched ON, not registered on the network
		Slow flash LED ON for 200 ms, OFF for 2 s	Wireless CPU switched ON, registered on the network
		Quick flash LED ON for 200 ms, OFF for 600 ms	Wireless CPU switched ON, registered on the network, communication in progress
		Very quick flash LED ON for 100ms, OFF for 200ms	Wireless CPU switched on, software downloaded is either corrupted or non-compatible ("BAD SOFTWARE")

Pin description

Signal	Pin number	I/O	I/O type	Reset state	Description
FLASH-LED	17	O	Open Drain Output	1 and Undefined	LED driving

See chapter "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

Figure 11 : FLASH-LED state during RESET and Initialization time

The FLASH-LED state is high during the RESET time and undefined during the software initialization time. During software initialization time, during 2 seconds max after RESET cancellation, the FLASH-LED signal is toggling and it doesn't provide the Wireless CPU status. After the 2s, the FLASH-LED provides the true status of the Wireless CPU.

Electrical characteristics of the signal

Parameter	Condition	Minimum	Typ	Maximum	Unit
V _{OL}				0.4	V
I _{OUT}				8	mA

3.21 Digital audio interface (PCM)

The Digital audio interface (PCM) interface mode allows the connectivity with audio standard peripherals. It can be used, for example, for connecting an external audio codec.

The programmability of this mode allows address a large range of audio peripherals.

PCM features :

- IOM-2 compatible device on physical level
- Master mode only with 6 slots by frame, user only on slot 0
- Bit rate single clock mode at 768KHz only
- 16 bits data word MSB first only
- Linear Law only (no compression law)
- Long Frame Synchronization only
- Push pull configuration on PCM-OUT and PCM-IN

The digital audio interface configuration can't be different from the specified features above.

3.21.1 Description

PCM interface consists of 4 wires :

- PCM-SYNC (output) : The frame synchronization signal delivers an 8KHz frequency pulse that synchronizes the frame data in and the frame data out.
- PCM-CLK (output) : The frame bit clock signal controls the data transfer with the audio peripheral.
- PCM-OUT (output) : The frame "data out" depending on the selected configuration mode.
- PCM-IN (input) : The frame "data in" is depending on the selected configuration mode.

Figure 12 : PCM Frame waveform

Figure 13 : PCM Sampling waveform

AC characteristics

Signal	Description	Minimum	Typ	Maximum	Unit
T _{sync_low} + T _{sync_high}	PCM-SYNC period		125		μs
T _{sync_low}	PCM-SYNC low time		93		μs
T _{sync_high}	PCM-SYNC high time		32		μs
T _{SYNC-CLK}	PCM-SYNC to PCM-CLK time		-154		Ns
T _{CLK-cycle}	PCM-CLK period		1302		Ns
T _{IN-setup}	PCM-IN setup time	50			Ns
T _{IN-hold}	PCM-IN hold time	50			Ns
T _{OUT-delay}	PCM-OUT delay time			20	Ns

Pin description of PCM interface

Signal	Pin number	I/O	I/O type	Reset state	Description
PCM-SYNC	77	O	1V8	Pull down	Frame synchronization 8Khz
PCM-CLK	79	O	1V8	Pull down	Data clock
PCM-OUT	80	O	1V8	Pull up	Data output
PCM-IN	78	I	1V8	Pull up	Data input

See chapter "3.3 Electrical information for digital I/O" for Open drain, 2V8 and 1V8 voltage characteristics and for Reset state definition.

3.22 USB 2.0 interface

A 4-wire USB slave interface is available, compiling with USB 2.0 protocol signaling, but not with electrical interface, due to the not complying 5V of VPAD-USB.

The USB interface signals are VPAD-USB, USB-DP, USB-DM and GND.

USB interface features :

- 12Mbit/s full speed transfer rate
- 3.3V typ compatible
- USB Softconnect feature
- Download feature is not supported by USB
- CDC 1.1 – ACM compliant

NOTE:

A 5V to 3.3V typ voltage regulator is needed between the external interface power in line (+5V) and the Wireless CPU line (VPAD-USB).

Pin description of USB interface

Signal	Pin number	I/O	I/O type	Description
VPAD-USB	52	I	VPAD_USB	USB Power Supply
USB-DP	54	I/O	VPAD_USB	Differential data interface positive
USB-DM	56	I/O	VPAD_USB	Differential data interface negative

Electrical characteristics of the signals

Parameter	Min	Typ	Max	Unit
VPAD-USB, USB-DP, USB-DM	3	3.3	3.6	V

3.23 RF interface

The impedance is 50 Ohms nominal and the DC impedance is 0 Ohm.

3.23.1 RF connections

U.FL Connector

A wide variety of cables fitted with U.FL connectors is proposed by different supplier.

Soldered solution

The soldered solution will preferably be based on a RG178 coaxial cable.

IMP connector

This connector is dedicated to board to board application and must be soldered on customer board. The supplier is Radiall with the following reference : R107 064 900.

Notes :

- The WISMO Quik Q2686 does not support an antenna switch for a car kit but this function can be implemented externally and it can be driven using a GPIO.
- The antenna cable and connector should be chosen in order to minimize losses in the frequency bands used for GSM 850/900MHz and 1800/1900MHz.
- 0.5dB can be considered as a maximum value for loss between the Wireless CPU and an external connector.
- Concerning mounting, assembly and handling of the IMP connector, please contact directly the supplier Radiall. Wavecom can not support the customer regarding the use of this connector.

3.23.2 RF performances

RF performances are compliant with the ETSI recommendation GSM 05.05.

The main parameters for Receiver are :

- GSM850 Reference Sensitivity = -104 dBm Static & TUNHigh
- E-GSM900 Reference Sensitivity = -104 dBm Static & TUNHigh
- DCS1800 Reference Sensitivity = -102 dBm Static & TUNHigh
- PCS1900 Reference Sensitivity = -102 dBm Static & TUNHigh
- Selectivity @ 200 kHz : > +9 dBc
- Selectivity @ 400 kHz : > +41 dBc
- Linear dynamic range : 63 dB
- Co-channel rejection : >= 9 dBc

And for Transmitter :

- Maximum output power (EGSM & GSM850): 33 dBm +/- 2 dB at ambient temperature

- Maximum output power (GSM1800 & PCS1900) : 30 dBm +/- 2 dB at ambient temperature
- Minimum output power (EGSM & GSM850) : 5 dBm +/- 5 dB at ambient temperature
- Minimum output power (GSM1800 & PCS1900) : 0 dBm +/- 5 dB at ambient temperature

3.23.3 Antenna specifications

The antenna must fulfill the following requirements :

- The optimum operating frequency depends on application. A dual Band or a quad band antenna shall work in these frequency bands and have the following characteristics :

Characteristic		Q2686			
		E-GSM 900	DCS 1800	GSM 850	PCS 1900
TX Frequency		880 to 915 MHz	1710 to 1785 MHz	824 to 849 MHz	1850 to 1910 MHz
RX Frequency		925 to 960 MHz	1805 to 1880 MHz	869 to 894 MHz	1930 to 1990 MHz
Impedance		50 Ohms			
VSWR	Rx max	1.5 :1			
	Tx max	1.5 :1			
Typical radiated gain		0dBi in one direction at least			

4 Technical specifications

				NC-15	95	96	NC-14				
				NC-17	97	98	NC-16				
				NC-19	99	100	NC-18				

* The I/O direction information is concerning only the nominal signal. When the signal is configured in GPIO, it can always be an Input or an Output.

** For more information about the multiplexing of those signals, see "General purpose input /output" chapter 3.9

4.2 Environmental Specifications

Wavecom specify following temperature range Q2686 product

The Wismo Quik Q2686 is compliant with following operating class

Conditions	Temperature range
Operating / Class A	-20 °C to +55°C
Operating / Storage / Class B	-40 °C to +85°C

Function Status Classification:

Class A:

The Wireless CPU remains fully functional, meeting GSM performance criteria in accordance with ETSI requirements, across the specified temperature range.

Class B:

The Wireless CPU remains fully functional, across the specified temperature range. Some GSM parameters may occasionally deviate from the ETSI specified requirements and this deviation does not affect the ability of the Wireless CPU to connect to the cellular network and function fully, as it does within the Class A range.

Q2686		ENVIRONNEMENTAL CLASSES		
TYPE OF TEST	STANDARDS	STORAGE Class 1.2	TRANSPORTATION Class 2.3	OPERATING (PORT USE) Class 7.3
Cold	IEC 68-2.1 Ab test	-25° C 72 h	-40° C 72 h	-20° C (GSM900) 16 h -10° C (GSM1800/1900) 16h
Dry heat	IEC 68-2.2 Bb test	+70° C 72 h	+70° C 72 h	+55° C 16 h
Change of temperature	IEC 68-2.14 Na/Nb test		-40° / +30° C 5 cycles t1 = 3 h	-20° / +30° C (GSM900) 3 cycles -10° / +30° C (GSM1800/1900): 3 cycles t1 = 3 h
Damp heat cyclic	IEC 68-2.30 Db test	+30° C 2 cycles 90% - 100% RH variant 1	+40° C 2 cycles 90% - 100% RH variant 1	+40° C 2 cycles 90% - 100% RH variant 1
Damp heat	IEC 68-2.56 Cb test	+30° C 4 days	+40° C 4 days	+40° C 4 days

Figure 14 : Environmental classes

4.3 Mechanical specifications

4.3.1 Physical characteristics

The WISMO Quik Q2686 Wireless CPU has a complete self-contained shield.

- Overall dimensions : 32.2x40x4 mm (except shielding pins)
- Weight : <10 g

4.3.2 Mechanical drawings

The next page gives the mechanical specifications of WISMO Quik Q2686.

Figure 15 : Mechanical drawing

5 Connectors and peripheral devices references

5.1 General Purpose Connector

The GPC is a 100-pin connector with 0.5mm pitch of P5K series from PANASONIC group with the following reference :

AXK69510002

The matting connector has the following reference :

AXK59510001

The stacking height is 3.0 mm.

WAVECOM recommends to you to used the AXK59510001 connector for your application to profit of WAVECOM's prices. For more information, contact WAVECOM by specifying the WAVECOM connector reference : WM17077.

For further details see GPC data sheets in appendix. More information is also available from <http://www.panasonic.com/host/industrl.html>

5.2 SIM Card Reader

- ITT CANNON CCM03 series (see <http://www.ittcannon.com>)
- AMPHENOL C707 series (see <http://www.amphenol.com>)
- JAE (see <http://www.jae.com>)

Drawer type :

- MOLEX 99228-0002 (connector) / MOLEX 91236-0002 (holder) (see <http://www.molex.com>)

5.3 Microphone

Possible suppliers :

- HOSIDEN
- PANASONIC
- PEIKER

5.4 Speaker

Possible suppliers :

- SANYO
- HOSIDEN
- PRIMO
- PHILIPS

5.5 Antenna Cable

A wide variety of cables fitted with UF-L connectors is proposed by HIROSE :

- UF-L pigtails, Ex :Ref = U.FL-2LP(V)-04-A-(100)
- UF-L Ref = U.FL-R-SMT
- UF-L cable assemblies,
- Between series cable assemblies.

More information is also available from <http://www.hirose-connectors.com/>.

A coaxial cable can be also soldered on the RF pad. The following reference has been qualified for being mounted on WISMO Quik Q2686:

- RG178
- RG316

5.6 RF Board to board connector

The supplier for the IMP connector is Radiall (<http://www.radiall.com>) with the following reference :

- R107 064 900.

5.7 GSM antenna

GSM antennas and support for antenna adaptation can be obtained from manufacturers such as:

- ALLGON (<http://www.allgon.com>)
- IRSCHMANN (<http://www.hirschmann.com/>)

6 Design Guidelines

The purpose of the following paragraphs is to give design guidelines.

6.1 HARDWARE and RF

6.1.1 EMC recommendations

The EMC tests have to be performed as soon as possible on the application to detect any possible problem.

When designing, special attention should be paid to:

- Possible spurious emission radiated by the application to the RF receiver in the receiver band
- ESD protection **is mandatory** on all signals which have external accessibility (typically human accessibility). See WISMO Quik Q2686 Customer Design Guidelines WM_PRJ_Q2686_PTS_003 [2] for ESD protection samples.
 - Typically ESD protection is mandatory for :
 - SIM (if accessible from outside)
 - serial link,...
- EMC protection on audio input/output (filters against 900MHz emissions)
- Biasing of the microphone inputs
- Length of the SIM interface lines (preferably <10cm)
- Ground plane : WAVECOM recommends to have a common ground plane for analog / digital / RF grounds.
- Metallic case or plastic casing with conductive paint are recommended

Note :

The Wireless CPU does not include any protection against overvoltage.

6.1.2 Power Supply

The power supply is one of the key issues in the design of a GSM terminal.

A weak power supply design could affect in particular :

- EMC performances
- the emissions spectrum
- the phase error and frequency error

WARNING:

Careful attention should be paid to :

wavecom confidential ©

Page : **77 / 87**

This document is the sole and exclusive property of WAVECOM. Not to be distributed or divulged without prior written agreement.

Ce document est la propriété exclusive de WAVECOM. Il ne peut être communiqué ou divulgué à des tiers sans son autorisation préalable.

- Quality of the power supply : low ripple, PFM or PSM systems should be avoided (PWM converter preferred).
- Capacity to deliver high current peaks in a short time (pulsed radio emission).

6.1.3 Layout requirement

CHIPS & BORING DIAMETER

of the WISMO QUIK mechanical insertion pins

CASE N 1

To be used in priority

CASE N 2

on specific request

Tolerance $\pm 0.1\text{mm}$

1.00 mm reamer

CASE N 3

Other

THERMAL BRAKES DEFINITION

Figure 16 : Layout requirement

6.1.4 Antenna

WARNING:

Wavecom strongly recommends to work with an antenna manufacturer either to develop an antenna adapted to the application or to adapt an existing solution to the application.

Both the mechanical and electrical antenna adaptation is one of the key issues in the design of the GSM terminal.

6.2 Mechanical integration

Attention should be paid to :

- Antenna cable integration (bending, length, position, etc)
- Legs of the Wireless CPU to be soldered on the Ground plane

6.3 Operating System upgrade

The WISMO Quik Q2686 Operating System is stored in flash memory and it can easily be upgraded.

IMPORTANT:

In order to follow the regular evolutions of the GPRS standard and to offer state of the art Operating System, Wavecom recommends that the application designed around a WISMO (or WISMO based product) allows easy Operating System upgrades on the Wireless CPU via the standard Xmodem protocol. Therefore, the application shall either allow a direct access to the WISMO serial link through an external connector or implement any mechanism allowing the WISMO Operating System to be downloaded via Xmodem.

The Operating System file can be downloaded into the modem using the Xmodem protocol. AT+WDWL command allows to launch the download process (see description in the AT command User Guide).

The necessary serial signals to proceed with the Xmodem downloading are:

Rx, Tx, RTS, CTS and GND.

The Operating System file can be also downloaded into the modem using the DOTA (download over the air) feature. This feature is available with Open AT[®] interface. For more detail, please, refer to the Open AT[®] documentation.

7 Appendix

7.1 Standards and Recommendations

GSM ETSI, 3GPP, GCF and NAPRD03 recommendations for Phase II & FCC.

Specification Reference	Title
3GPP TS 45.005 v5.5.0 (2002-08) Release 5	Technical Specification Group GSM/EDGE. Radio Access Network; Radio transmission and reception

NAPRD03 V2.6.0 (2002-06)	North America Permanent Reference Document for PTCRB tests

The Q2686 Wireless CPU connected on a development kit board application is certified to be in accordance with the following Rules and Regulations of the Federal Communications Commission (FCC).

Power listed on the Gant is conducted for Part 22 and conducted for Part 24

This device contains GSM, GPRS Class 10 functions in the 900

and 1800MHz Band which are not operational in U.S. Territories.

This device is to be used only for mobile and fixed applications. The antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

Users and installers must be provided with antenna installation instructions and transmitter operating conditions for satisfying RF exposure compliance. Antennas used for this OEM module must not exceed 3.3dBi gain for PCS 1900 MHz and 6dBd(8.14dBi) GSM 850 MHz for mobile and fixed operating configurations. This device is approved as a module to be installed in other devices.

Installed in other portable devices, the exposure conditions required a separate equipment authorization.

The license module had a FCC ID label on the module itself. The FCC ID label must be visible through a window or it must be visible when an access panel, door or cover is easily removed. If not, a second label must be placed on the outside of the device that contains the following text:
Contains FCC ID: O9EQ2686

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

IMPORTANT: Manufacturers of mobile or fixed devices incorporating Q2686 Wireless CPU are advised to

- clarify any regulatory questions,
- have their completed product tested,
- have product approved for FCC compliance, and
- include instructions according to above mentioned RF exposure statements in end product user manual.

Please note that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

7.2 Safety recommendations (for information only)

IMPORTANT
FOR THE EFFICIENT AND SAFE OPERATION OF YOUR GSM APPLICATION
BASED ON WISMO Quik Q2686
PLEASE READ THIS INFORMATION CAREFULLY

7.2.1 RF safety

7.2.1.1 General

Your GSM terminal¹ is based on the GSM standard for cellular technology. The GSM standard is spread all over the world. It covers Europe, Asia and some parts of America and Africa. This is the most used telecommunication standard.

Your GSM terminal is actually a low power radio transmitter and receiver. It sends out and receives radio frequency energy. When you use your GSM application, the cellular system which handles your calls controls both the radio frequency and the power level of your cellular modem.

7.2.1.2 Exposure to RF energy

There has been some public concern about possible health effects of using GSM terminals. Although research on health effects from RF energy has focused on the current RF technology for many years, scientists have begun research regarding newer radio technologies, such as GSM. After existing research had been reviewed, and after compliance to all applicable safety standards had been tested, it has been concluded that the product was fitted for use.

If you are concerned about exposure to RF energy there are things you can do to minimize exposure. Obviously, limiting the duration of your calls will reduce your exposure to RF energy. In addition, you can reduce RF exposure by operating your cellular terminal efficiently by following the below guidelines.

7.2.1.3 Efficient terminal operation

For your GSM terminal to operate at the lowest power level, consistent with satisfactory call quality :

If your terminal has an extendible antenna, extend it fully. Some models allow you to place a call with the antenna retracted. However your GSM terminal operates more efficiently with the antenna fully extended.

Do not hold the antenna when the terminal is « IN USE ». Holding the antenna affects call quality and may cause the modem to operate at a higher power level than needed.

¹ based on WISMO2D

7.2.1.4 Antenna care and replacement

Do not use the GSM terminal with a damaged antenna. If a damaged antenna comes into contact with the skin, a minor burn may result. Replace a damaged antenna immediately. Consult your manual to see if you may change the antenna yourself. If so, use only a manufacturer-approved antenna. Otherwise, have your antenna repaired by a qualified technician.

Use only the supplied or approved antenna. Unauthorized antennas, modifications or attachments could damage the terminal and may contravene local RF emission regulations or invalidate type approval.

7.2.2 General safety

7.2.2.1 Driving

Check the laws and the regulations regarding the use of cellular devices in the area where you have to drive as you always have to comply with them. When using your GSM terminal while driving, please :

- give full attention to driving,
- pull off the road and park before making or answering a call if driving conditions so require.

7.2.2.2 Electronic devices

Most electronic equipment, for example in hospitals and motor vehicles is shielded from RF energy. However RF energy may affect some improperly shielded electronic equipment.

7.2.2.3 Vehicle electronic equipment

Check your vehicle manufacturer representative to determine if any on-board electronic equipment is adequately shielded from RF energy.

7.2.2.4 Medical electronic equipment

Consult the manufacturer of any personal medical devices (such as pacemakers, hearing aids, etc...) to determine if they are adequately shielded from external RF energy.

Turn your terminal OFF in health care facilities when any regulations posted in the area instruct you to do so. Hospitals or health care facilities may be using RF monitoring equipment.

7.2.2.5 Aircraft

Turn your terminal OFF before boarding any aircraft.

- Use it on the ground only with crew permission.
- Do not use it in the air.

To prevent possible interference with aircraft systems, Federal Aviation Administration (FAA) regulations require you to have permission from a crew member to use your terminal while the aircraft is on the ground. To prevent interference with cellular systems, local RF regulations prohibit using your modem while airborne.

7.2.2.6 Children

Do not allow children to play with your GSM terminal. It is not a toy. Children could hurt themselves or others (by poking themselves or others in the eye with the antenna, for example). Children could damage the modem, or make calls that increase your modem bills.

7.2.2.7 Blasting areas

To avoid interfering with blasting operations, turn your unit OFF when in a « blasting area » or in areas posted : « turn off two-way radio ». Construction crew often use remote control RF devices to set off explosives.

7.2.2.8 Potentially explosive atmospheres

Turn your terminal OFF when in any area with a potentially explosive atmosphere. It is rare, but your modem or its accessories could generate sparks. Sparks in such areas could cause an explosion or fire resulting in bodily injuries or even death.

Areas with a potentially explosive atmosphere are often, but not always, clearly marked. They include fuelling areas such as petrol stations ; below decks on boats ; fuel or chemical transfer or storage facilities ; and areas where the air contains chemicals or particles, such as grain, dust, or metal powders.

Do not transport or store flammable gas, liquid, or explosives, in the compartment of your vehicle which contains your terminal or accessories.

Before using your terminal in a vehicle powered by liquefied petroleum gas (such as propane or butane) ensure that the vehicle complies with the relevant fire and safety regulations of the country in which the vehicle is to be used.
