CANSEC INC.

3105 Unity Drive, Suite # 9
Mississauga, Ontario
CANADA L5L 4L2

Attn.: Mr. Ed Malconian

**Subject: FCC Certification Application Testing under FCC PART 15,
Subpart C - Unlicensed Low Power Transmitter operating in the
frequency band 13.553-13.567 MHz.**

Product: ZODIAC FINGERPRINT READER
Model No.: ZODRCS
FCC ID: OD5-ZODRCS

Dear Mr. Malconian,

The product sample, as provided by you, has been tested and found to comply with
**FCC PART 15, Subpart C - Unlicensed Low Power Transmitter operating in the
frequency band 13.553-13.567 MHz.**

Enclosed you will find copies of the engineering report. If you have any queries, please
do not hesitate to contact us.

Yours truly,

Tri Minh Luu, P. Eng.,
V.P., Engineering

Encl

ENGINEERING TEST REPORT

ZODIAC FINGERPRINT READER Model No.: ZODRCS

FCC ID: OD5-ZODRCS

Applicant: **CANSEC SYSTEMS LIMITED**
3105 Unity Drive, Suite # 9
Mississauga, Ontario
CANADA L5L 4L2

In Accordance With

**FEDERAL COMMUNICATIONS COMMISSION (FCC)
PART 15, SUBPART C
Unlicensed Low Power Transmitter
operating in the band 13.553-13.567 MHz**

UltraTech's File No.: CSC-019F15.225

This Test report is Issued under the Authority of
Tri M. Luu, Professional Engineer,
Vice President of Engineering
UltraTech Group of Labs

Date: Nov. 29, 2002

Report Prepared by: Tri Luu

Tested by: Hung Trinh, RFI Technician

Issued Date: Nov. 29, 2002

Test Dates: Nov. 25, 2002

- The results in this Test Report apply only to the sample(s) tested, and the sample tested is randomly selected.
- This report must not be used by the client to claim product endorsement by NVLAP or any agency of the US Government.

EXHIBIT 2. INTRODUCTION

2.1. SCOPE

Reference:	FCC Part 15, Subpart C - Unlicensed Low Power Transmitter
Title	Telecommunication - Code of Federal Regulations, CFR 47, Part 15, Subpart C
Purpose of Test:	This report is covered test results for Certification compliance with FCC regulations for Unlicensed Low Power Transmitter operating in the 13.553-13.567 MHz band.
Test Procedures	Both conducted and radiated emissions measurements were conducted in accordance with American National Standards Institute ANSI C63.4 - American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz.
Environmental Classification:	• Light-industry, Commercial • Industry

3.2. EQUIPMENT UNDER TEST (EUT) INFORMATION

The following information (with the exception of the Date of Receipt) has been supplied by the applicant.

Brand Name	CANSEC SYSTEMS LIMITED
Product Name	ZODIAC FINGERPRINT READER
Model Name or Number	ZODRCS
Serial Number	01756
Type of Equipment	Unlicensed Low Power Transmitter
Input Power Supply Type	AC-DC External Power Supply, by Elpac Power Systems, Model W1512, Input 100-240V, 1A, Output: 12 Vdc

ULTRATECH GROUP OF LABS

3.3. THEORY OF OPERATION

The Cansec Model ZODRCS employs a 13.56 MHz Radio Module which is manufactured by Inside Technologies.

After the power (12VDC) is applied to the unit, the right LED on the unit turns on. The left LED stays off and the unit goes through self test mode which usually takes about 15 - 20 seconds.. The self test sequence is as follows.

The main interface board will try to communicate with the contactless reader module through RS232 . If the communication is successful, the unit will beep three times . But if the communication fails the left LED will flash red then green for five times then goes off . This sequence will be repeated every 15 seconds until the communication between the main interface board and the contact less reader is successful or the problem is corrected.

After establishing successful communication with the contactless reader module, the main interface board will try to establish communication with the finger print reader module through RS232. If the communication is successful the left LED turns on and stays on indicating that the self test is completed otherwise the unit will beep three times and repeat the previous step until is successful or the problem is fixed.

After the self test is completed the unit will enter the idle state, where it scans contentiously for contactless smart cards that are within range of 3 inches or less and contain Cansec data .

If a User presents a card at the unit, the unit will try to read the card implementing ASK modulation, Manchester coding protocol. During the reading the left LED flashes rapidly indicating that an active communication between the unit and the contactless card is in process, which usually takes about a second .

Once the data transfer is completed successfully the unit beeps once indicating to the user that the reading is complete at the same time the finger print reader scanner turns on, prompting the user to place a finger . The scanner captures the image of the finger and compares it with the data that was read from the card . If the matching is successful the unit beeps once and the left LED turns green for 3 seconds then turns red again while an ID number associated with user=s card is sent to the host controller through pins one and two of the eight pin connector . If the matching is unsuccessful the unit will beep three times and the left LED flashes red three times simultaneously, indicating to the user that the verification failed . No data is sent to the host controller.

3.4. EUT'S TECHNICAL SPECIFICATIONS

TRANSMITTER	
Equipment Type:	▪ Base station (fixed use) - Wall mounted
Intended Operating Environment:	▪ Commercial, light industry & heavy industry
Power Supply Requirement:	12 Vdc using an external AC-DC power supply
RF Output Power Rating:	342.77 uV/m at 10 meters
Operating Frequency Range:	13.553-13.567 MHz
RF Output Impedance:	50 Ohms
Channel Spacing:	1
Duty Cycle:	100%
26 dB Bandwidth:	4.14 kHz
Modulation Type:	ASK ISO 15693 Manchester coding 26 KBit Baud
Emission Designation:	4K1D1D
Oscillator Frequencies:	4.9152 MHz , 36.864 MHz, 13.56 MHz
Antenna Connector Type:	Internal, integral PCB Loop Antenna located inside the plastic enclosure

3.5. LIST OF EUT'S PORTS

Port Number	EUT's Port Description	Number of Identical Ports	Connector Type/Cable Length	Cable Type (Shielded/Non-shielded)
1	RS-232	1	Wiring Harness	Non-shielded
1	DC Supply Input Port	1	Wiring Harness	Non-shielded

3.6. ANCILLARY EQUIPMENT

No ancillary equipment necessary to exercise the ports during tests:

4.1. CLIMATE TEST CONDITIONS

The climate conditions of the test environment are as follows:

Temperature:	21°C
Humidity:	51%
Pressure:	102 kPa
Power input source:	12 Vdc using an external AC-DC power supply

4.2. OPERATIONAL TEST CONDITIONS & ARRANGEMENT FOR TESTS

Operating Modes:	The transmitter radiate 13.56 MHz continuously during testing
Special Test Software:	None
Special Hardware Used:	None
Transmitter Test Antenna:	Internal, integral PCB Loop Antenna

EXHIBIT 5. SUMMARY OF TEST RESULTS

5.1. LOCATION OF TESTS

All of the measurements described in this report were performed at Ultratech Group of Labs located in the city of Oakville, Province of Ontario, Canada.

- Radiated Emissions were performed at the Ultratech's 10 meter Open Field Test Site (OFTS) situated in the Town of Oakville, province of Ontario.

The above sites have been calibrated in accordance with ANSI C63.4, and found to be in compliance with the requirements of Sec. 2.948 of the FCC Rules. The descriptions and site measurement data of the Oakville Open Field Test Site has been filed with FCC office (FCC File No.: 31040/SIT 1300B3) and Industry Canada office (Industry Canada File No.: IC2049). Last Date of Site Calibration: Aug. 20, 2002.

5.2. MODIFICATIONS INCORPORATED IN THE EUT FOR COMPLIANCE PURPOSES

None

5.3. APPLICABILITY & SUMMARY OF EMC EMISSION TEST RESULTS

FCC PARAGRAPH.	TEST REQUIREMENTS	COMPLIANCE (YES/NO)
15.203 & 15.204	The transmitter shall use a transmitting antenna that is an integral part of the device	Yes
	Power Limits & 26 dB Bandwidth	Yes
15.225(a) & (b)	Field Strength of Emissions inside and outside the permitted band 13.553-13.567 MHz	Yes
15.225(c)	Frequency Stability	Yes
15.107 & 15.207	Class B - AC Power Conducted Emissions on Tx, Rx and standby modes	Yes
15.109(b)	Class B - Radiated Emissions from Unintentional Radiators	Yes. A separate test report will be provided upon request.

EXHIBIT 6. MEASUREMENTS, EXAMINATIONS & TEST DATA FOR EMC EMISSIONS

6.1. TEST PROCEDURES

This section contains test results only. Details of test methods and procedures can be found in Exhibit 8 of this report and ANSI C63-4:1992

6.2. MEASUREMENT UNCERTAINTIES

The measurement uncertainties stated were calculated in accordance with requirements of UKAS Document NIS 81 with a confidence level of 95%. Please refer to Exhibit 7 for Measurement Uncertainties.

6.3. MEASUREMENT EQUIPMENT USED:

The measurement equipment used complied with the requirements of the Standards referenced in the Methods & Procedures ANSI C64-3:1992, FCC 15.407 and CISPR 16-1.

6.4. ESSENTIAL/PRIMARY FUNCTIONS AS DECLARED BY THE MANUFACTURER:

The essential function of the EUT is to correctly communicate data to and from radios over RF link.

6.5. COMPLIANCE WITH FCC PART 15 – GENERAL TECHNICAL REQUIREMENTS

FCC Section	FCC Rules	
15.203	Described how the EUT complies with the requirement that either its antenna is permanently attached, or that it employs a unique antenna connector, for every antenna proposed for use with the EUT. The exception is in those cases where EUT must be professionally installed. In order to demonstrate that professional installation is required, the following 3 points must be addressed: • The application (or intended use) of the EUT • The installation requirements of the EUT • The method by which the EUT will be marketed	Conforms. Integral, permanently attached and located inside the enclosure
15.204	Provided the information for every antenna proposed for use with the EUT: (a) type (e.g. Yagi, patch, grid, dish, etc...), (b) manufacturer and model number (c) gain with reference to an isotropic radiator	N/A

6.7.2. Method of Measurements

Refer to Exhibit 8, Sec. 8.3 of this test report and **ANSI 63.4-1992, Para. 8** for detailed radiated emissions measurement procedures.

Applies to harmonics/spurious that fall in the restricted bands listed in Section 15.205. the maximum permitted average field strength is listed in Section 15.209. A Pre-Amp and highpass filter are used for this measurement.

- For measurements from 9 KHz to 150 KHz, set RBW = 200 Hz, VBW $\geq$ RBW, SWEEP=AUTO.
- For measurements from 150 KHz to 30 MHz, set RBW = 10 KHz, VBW $\geq$ RBW, SWEEP=AUTO.
- For measurements from 30 MHz to 1 GHz, set RBW = 100 KHz, VBW $\geq$ RBW, SWEEP=AUTO.
- For measurement above 1 GHz, set RBW = 1 MHz, VBW = 1 MHz, SWEEP=AUTO.

If the emission is pulsed, modified the unit for continuous operation, then use the settings above for measurements, then correct the reading by subtracting the peak-average correction factor derived from the appropriate duty cycle calculation. See Section 15.35(b) and (c).

6.7.3. Test Equipment List

Test Instruments	Manufacturer	Model No.	Serial No.	Frequency Range
Spectrum Analyzer/ EMI Receiver	Hewlett Packard	HP 8593EM	3412A00103	9 kHz – 26.5 GHz
Peak Power Meter & Peak Power Sensor	Hewlett Packard	8900 8481A	2131A00124 2551A01965	0.1-18 GHz 50 Ohms Input
Microwave Amplifier	Hewlett Packard	HP 83017A		1 GHz to 26.5 GHz
Active Loop Antenna	EMCO	6507	8906-1167	1 kHz – 30 MHz
Log Periodic/Bow-Tie Antenna	EMCO	3143	1029	20 - 1000 MHz

6.7.4. Photographs of Test Setup

Refer to photos # 1 and 3 in Annex 1 for photos of test setup

6.7.5. Test Data

The radiated emissions were scanned from 10 kHz to 1 GHz and all emission less than 20 dB below the FCC Limits were recorded

FREQUENCY (MHz)	RF LEVEL @10m (dBuV/m)	DETECTOR USED (PEAK/QP)	ANTENNA		MARGIN (dB)	PASS/ FAIL
			PLANE (H/V)	LIMIT 10m (dBuV/m)		
13.560	50.7	PEAK	0 degree	89.5	-38.8	PASS
