

1 RF Exposure

General SAR test reduction & exclusion guidance

KDB 447498

Section 4.3 General SAR test reduction and exclusion guidance

For Standalone SAR exclusion consideration, when SAR Exclusion Threshold requirement in KDB 447498 is satisfied, standalone SAR evaluation for general population exposure conditions by measurement or numerical simulation is not required.

The SAR Test Exclusion Threshold for frequencies below 100 MHz, and for test separation distance of ≤ 50 mm, is determined as follows.

$$\text{SAR Exclusion Threshold (SARET)} = [(NT \times \text{TSD}_A) / \sqrt{0.1}] \times [1 + \text{Log} (100 / f_{\text{MHz}})] \times 1/2$$

Where,

NT = Numeric Threshold (3.0 for 1-g SAR and 7.5 for 10-g SAR)

$\text{TSD}_A = 50$ mm

f_{MHz} = Transmit frequency in MHz

Channel Frequency (MHz)	EIRP (mW)	SAR Exclusion Threshold at 5 mm (mW)	SAR Evaluation
13.56	0.0023	443	Excluded

Therefore standalone SAR evaluation for general population exposure conditions by measurement or numerical simulation is not required.
