2	The frequency range of CDP-TX-02N module is 433.875 MHz up to 434.650 MHz (see uploaded data sheets). The printing on the label (433 MHz) is only for operating band information. The change of channel is only available by manufacturer not for the customer (because dip switches are on the bottom side of the module.) The selected channel is a manufacturer default setting (434.650 MHz).
3	There are no different RF modules used (explained at pt. 2)
4	New file uploaded Note: Parts lists are only available in Japanese language! - New file uploaded
