

Answers to 2.ATCB comments (Email from Timothy Johnson - June 25, 2003):

1	New files uploaded (Schematics and Parts Lists)
2	Corrected Test Report uploaded. ITU Designation on page 3 corrected. Page 33 also modified, according your "measurement". The spectrum mask between the two models looks identical.
3	
4	The used TX module is a special customized module - specially made for Akerströms Björbo AB only for this application! The RF output power is limited to max. 100 mW, also the modulation is limited to measured values! About the pin holes in the cover - the adjustment were made at Ultracom company under customized specification. After the adjustment the holes were sealed. The specifications at the Ultracom website for this modules are for standard applications for the European market - not for US.
