

Operation Description

12429 (49M) R/C Power Boss

The transmitter operates at 49.860MHz, in which is controlled by a crystal. It is powered by 9V battery. There are two-control sticks on the transmitter. When the forward control trigger is pushed / pulled once, a radio frequency control signal will be transmitted to the receiver for going forward/backward. When the left and right sticks are pushed once, a radio frequency will be transmitted to the receiver for going left/right.
