

Front Panel... FCC ID: OKRMX800RT

The MX800 standard front panel is illustrated below.

The following table explains the functions of the front panel LEDs which indicate the status of the MX800 in real time.

LED	FUNCTION
POWER	Indicates the power supply voltage is within software selectable limits.
RX	A signal is being received by the receiver or the receivers squelch is open.
TX	The transmitter is transmitting RF power.
CTCSS	A valid Continuous Tone Coded Squelch Signal has been detected.
AUX	Aux function is selected or the PLL is unlocked.
ALARM	A general alarm condition exists.

“PMR” variant illustrated
