

Spectra Engineering PTY LTD

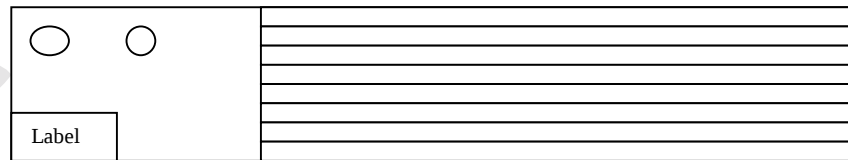

May 30, 2001

FCC ID: OKRMX800RT

Dear Sir or Madam:

Spectra Engineering has submitted for an equipment authorization based on the RELM ARUSRE35AB grant. Spectra Engineering is the current and only manufacturer of this equipment. RELM is an OEM reseller of the equipment. The only difference between the equipment being shipped to RELM and the Spectra Engineering labeled equipment would be the color of the front panel. The RELM equipment is black where as the Spectra equipment is a light grey. There are some variations however, where the black front panel is used without the Spectra Logo on the front. Nothing else is changed however. **ALL** circuitry, board layouts, chassis, etc are identical between the two units as it is assembled in our plant in Western Australia. All units would be labeled as shown below. The label for the Spectra Engineering equipment is shown below and would be located in the same position on the equipment as the RELM labeled units.

The label for the Spectra Engineering equipment is shown below and would be located in the same position on the equipment as the RELM labeled units which is one the lower left corner of the rear chassis.

Rear of Chassis

Sincerely,

Walter C. Simciak
US Agent for Spectra Engineering
