To Whom It May Concern:

This will serve as a request for confidentiality for the schematics for the radio. The schematics will be sent directly from the manufacturer to the FCC upon request. Once the review of the application is complete and the schematics are no longer needed, they must be returned to the manufacturer, where they were sent from.

Attached as Exhibit 1B you will find a request for approval as a professionally installed equipment.

Should you have any questions or require any further information with regards to this, please feel free to contact me.

SUBJECT: TELLUMAT(PTY) LIMITED.
FCCID: ONJ651-03585

To Whom It May Concern:

Attached you will find an application for a direct sequence spread spectrum assembly that is intended to be professionally installed. This unit will only be installed by authorized dealers that have been trained at the manufacturer's facilities.

The model only operates on two(2) frequencies, 2.411GHz and 2.455GHz and only comes in tow configurations;

1. Long pointed antenna
2. Parabolic Antenna.

The user manuel will have the following statement in it;
"WARNING! ALL PERSONNEL SHOULD STAY AT LEAST 1 METER(3.5') FROM ANTENNA TO AVOID EXPOSURE TO POSSIBLE MICROWAVE ENERGY."

The antenna is intended to use outside.

Sincerely,

S. S. Sanders

TEST PROCEDURE

GENERAL: This report shall NOT be reproduced except in full without the written approval of TIMCO ENGINEERING, INC. Shielded interface cables were used in all cases except for cables connecting to the telephone line and the power cords. A test program was run which simulated a normal data transmission on a network.

POWER LINE CONDUCTED INTERFERENCE: The procedure used was ANSI STANDARD C63.4-1992 using a 50uH LISN. Both lines were observed. The bandwidth of the spectrum analyzer was 10kHz with an appropriate sweep speed. The ambient temperature of the UUT was 76oF with a humidity of 55%.

BANDWIDTH 6.0dB: The measurements were made with the spectrum analyzer's resolution bandwidth(RBW)=100KHz and the video bandwidth(VBW)=300KHz and the span set as shown on plot.

POWER OUTPUT: The RF power output was measured at the antenna feed point using a peak power meter.

ANTENNA CONDUCTED EMISSIONS: The RBW=100KHz, VBW=300KHz and the span set to 100MHz and the spectrum was scanned from 30MHz to the 10th Harmonic of the fundamental.

RADIATION INTERFERENCE: The test procedure used was ANSI STANDARD C63.4-1992 using a HEWLETT PACKARD spectrum analyzer with a preselector. The bandwidth(RBW) of the spectrum analyzer was 100kHz up to

1GHz and 1.0MHz above 1GHz with an appropriate sweep speed. The VBW above 1.0GHz was = 10Hz. The analyzer was calibrated in dB above a microvolt at the output of the antenna. The ambient temperature of the UUT was 89oF with a humidity of 86%.

* designates digital emission.

METHOD OF MEASUREMENT: The procedure used was ANSI STANDARD C63.4-1992
 except the spread spectrum portion was connected to its custom antenna
 at a height of 1.5 meters. The spectrum was scanned from 30MHz to at

least the tenth harmonic of the fundamental. Above 1.0GHz the RBW was 1.0MHz and the VBW was 10Hz. The case was opened and the power removed from the radio in order to determine which emissions were digital. Measurements were made at the open field test site of TIMCO ENGINEERING INC. located at 6051 N.W. 19th LANE, GAINESVILLE, FL 32605.
