Product Description:

The RE6900T is a 900Mhz microprocessor controlled industrial wireless remote control system. This system is intended for mobile applications such as truck cranes, pumper trucks, and other applications where the user desires to interface wireless control with electrical, hydraulic, or pneumatic systems. Operation is achieved by pressing a button on the control pad, which sends a signal to the receiver, instructing it to open or close appropriate electrical relays.

The system is enclosed in a NEMA 4 gasketed enclosure with an external sealed membrane keypad.
