445 12th Street, SW
Washington, DC 20554

Dear Sir/Madam,

This letter is to acknowledge that WaveRider Communications (Canada) Inc. and its manufacturers will use epoxy glue on the EUM3006 modem antenna connector to ensure that the user cannot use an alternate antenna with this modem. This is a temporary procedure until an acceptable non-standard connector is found and approved by the FCC.

While we will comply with your requirement as noted above, I feel that this is an excessive interpretation of the requirements. The EUM3006 antenna is an integrated antenna and to replace it would require the user to open and damage the unit since there is no provision for external antennas in the existing packaging. Any user going to such lengths can defeat any non-standard antenna connector as easily, simply by removing the connector and soldering on any other connector.

Again, notwithstanding my objection to your interpretation, we will comply as noted above.

Yours truly,

Lawrence Gordon,
Senior Technical Design Lead,
