PERMISSIVE CHANGE LETTER

This **permissive change letter** concerns the approval OQA-FJMNf022 for the Model FJM Type NF022.

Changes/Differences for Model FJM Type NF022

There are two differences.

The first change is the **display** used in the transmitting unit. The current display is FSALID01A. The new display will be FSALCD27A with schematic diagram SC000456 (please see the file "sch_FSALCD27A.pdf").

The difference between the two display is memory size: in the new display a more capable one permits more functionalities and more performances.

The second change is the **electronic starting keyswitch** used in the transmitting unit. The current keyswitch is FSACHT01A. The new keyswitch will be FSACHT02A with schematic diagram SC000368 (please see the file "sch_FSACHT02A.pdf").

The only difference between the two electronic starting keyswitch is the casing.

When the change will be approved:

- 1) all the units will be produced only with the new display and the new electronic starting keyswitch
- 2) the operation of the unit and the working mode for the user are the same with the current and new radio keypad

Sincerely,

Ing. Antonio Silvestri
