

THE CABLE INSTALL LABEL (YELLOW) SHOULD BE NEAR THE WIRING FOR THE NXT PANEL.
WE'VE FOUND THAT INSTALLERS NEED TO ENSURE THE WIRE DOES NOT TOUCH THE PANEL.
LOCATING IT ANYWHERE ELSE BUT BESIDE THE WIRING WOULD DEFEAT THE PURPOSE.

THE NAMEPLATE ALREADY HAS A CUTOUT INSIDE - WE SHOULD USE IT.
THE SERIAL NUMBER AND SW REVISION LABEL SHOULD BE PLACED ABOVE THE NAMEPLATE.
THE FCC PART 15 (FOR PRODUCTION ONLY - NOT PILOT) SHOULD BE PLACED IN THE AREA.
