Sonicbox, Inc.

Sonicbox iMTM Remote Tuner, brief description

The Sonicbox iM Remote Tuner is a PC peripheral device consisting of a base unit, a hand held remote unit, and a 3rd party receiver. The base unit is connected to the USB port of a PC. It works in conjunction with the Sonicbox iM Software Tuner (a software application) to locate and broadcast the audio from the internet sites of internet radio stations. The base unit uses a 911.4 - 914.4 MHz transmitter to transmit audio to a 911.4 - 914.4 MHz receiver (from a 3rd party manufacturer) which is plugged into a home stereo. The hand held remote communicates with the base unit and is used to change stations, save stations, and control the PC volume. The hand held remote operates at 433 MHz.
