EMI Test Report
for
Agilent Technologies

Test Number : B90433

Product Name : Viridia Medical Telemetry Transmitter

Regulation : FCC, Part 15C (U.S.)

Date : 11/18/99

**Report Reviewed
& Accepted by:**

Agilent Technologies
3000 Minuteman Rd.
Andover, MA 01810

Report Issued By:

Richard L. Wiedeman, Laboratory Director

Tested By:

Tom Charron, Test Engineer

Tested By:

Bob Quinn, Test Engineer

This test report is not valid without the signatures of Test Site Services, Inc. personnel.

Administrative Data

Regulation : FCC, Part 15C, 15.201b, 15.215, 15.242, Part 2J

Per : 15.242c, 15.209, 15.207a

Test Method : ANSI C63.4-1992

Test Type : Certification

Manufacturer : Agilent Technologies

EUT Type/Model # : Viridia Medical Telemetry Transmitter / M2601A

Date(s) of Test : 11/18/99

Customer : Gordon Cook Engineer
Personnel : John Bilodeau Engineer

TSS Personnel : R. Wiedeman EMC Engineer
: Bob Quinn Test Engineer
: Tom Charron Test Engineer

Test Location : Open Area Test Site
Test Site Services, Inc.
30 Birch St.
Milford, MA 01757 U.S.A.

NOTICE	: FCC Rule 2.955 requires that a Verification Report for a Class A Computing Device must be signed by "an Official of the Company responsible for the device". A signature block has been provided on the first page for this purpose.
--------	--

EUT Description

The EUT is a (Viridia Medical Telemetry Transmitter) that monitors ECG and SPO₂ patient levels and transmits data to a central receiver system. It operates on specific frequencies from 590 to 632 MHz. Three units were tested at the low, middle and high end of the band (590.0, 611.0, 632.0 MHz.). These units (one at each frequency) were tested simultaneously in close proximity to each other for a worst case test configuration. The units were tested with optional AC adapters.

A complete description of the EUT may be found on block identifier page one.

The tests were run in a typical configuration including the following support equipment;

- | | |
|-----------------------|---------------------------------|
| 1) EUT 1 @ 590.0 MHz. | 4) (3) SPO ₂ Sensors |
| 2) EUT 2 @ 611.0 MHz. | 5) (3) ECG Leads |
| 3) EUT 3 @ 632.0 MHz. | 6) (3) AC Adapters |

REASON FOR TEST

Certification per FCC Part 15c, 15.201b, Part 2J

CHANGES MADE DURING TEST

None

DEVIATIONS FROM STANDARD TEST METHOD

None

Test Summary

The Viridia Medical Telemetry Transmitter complied with the FCC Part 15 Subpart C Limits for an intentional radiator when tested in the system configuration defined herein.

The following table indicates the margins (i.e. difference between measurement point and limit) of the six (6) worst case data points:

TEST CLASS	MARGIN TO SPEC (db)	FREQUENCY (Mhz)
<i>(Fundamental Frequencies)</i>	-4.6	590.0
<i>Per 15.242c</i>	-7.9	632.0
	-8.7	611.0
<i>Unwanted Signals</i>	-1.8	1264.00
<i>(including harmonics)</i>	-1.9	2528.00
<i>Per 15.209</i>	-2.0	1896.00
<i>(4.0 MHz. to 6.32 GHz.)</i>	-2.1	1222.00
	-2.9	569.00
	-3.2	2444.00
<i>Conducted Emissions</i>	-20.8	0.450
<i>Per 15.207a</i>	-26.8	1.380
<i>(120 VAC 60 Hz.)</i>	-33.8	19.210
	-35.5	21.990
	-37.8	26.710
	-38.3	14.930

Test Software Description

TITLE :

PART #/REV. : M2601-10015, Rev. A.03.01

FUNCTION :

REPEAT TIME : Continuous

RUN INSTRUCTIONS : Power on unit, starts automatically.

OPERATIONAL MODE(s) DURING TEST

OPERATIONAL MODES AVAILABLE:

Monitor patient ECG and SPO₂ and transmit to central receiver system.

MODE TESTED: Same as above

FUNCTION : Same as above

RATIONALE : Unit only operates in a single mode.

EUT I/O Ports – Cable Configuration

All testing was performed with the following cables/terminators connected to the EUT I/O ports:

EUT I/O Ports (All available by type)	Cable Attached (Yes/No)
ECG	Y
SPO ₂	Y
D.C. Input Power	Y

NOTE: FCC Tests : ONE of each TYPE of PORT must be cabled.

TEST PROCEDURES

Test Procedures - EMI Operational Description

GENERAL

For each emission signal, maximum level is achieved for both horizontal and vertical polarizations as well as (0-360) degrees turntable rotation.

Antenna Test Distances are selected at either 3, 10 or 30 meters separation from the EUT in accordance with applicable specification requirements.

Antenna Scan Heights are varied from 1-4 meters at Antenna Test Distances of 3, 10 and 30 meters.

FCC RADIATED EMISSIONS (E-FIELD)

EMI test procedures are performed in accordance with the requirements of ANSI C63.4 (1992). Measurements are initially obtained using broad band antennas and PEAK detection. In addition, cables are manipulated to maximize emissions within constraints of a typical system configuration. All measured data within 3 db of the Radiated Limits are retaken using Tuned Dipole Antennas (Roberts Type) and QUASI-PEAK (CISPR) Detection. Each EUT is powered from a 60Hz AC source.

FCC CONDUCTED EMISSIONS

EMI test procedures are performed in accordance with the requirements ANSI C63.4 (1992). Measurements are initially obtained with PEAK Detection. In addition, cables are manipulated to maximize emissions within constraints of a typical system configuration. All measured data within 3 db of the Conducted Limits are retaken using QUASI-PEAK (CISPR) Detection. Each EUT is powered from a 60Hz AC source.

CISPR22/EN55022 RADIATED EMISSIONS (E FIELD)

EMI test procedures are operated in accordance with the requirements of the CISPR22 (1993) and EN55022 (1987) Documents. Measurements are initially obtained with PEAK Detection. In addition, cables are manipulated to maximize emissions within constraints of a typical system configuration. All measured data within 3 db of the Radiated Limits are retaken using QUASI-PEAK (CISPR) detection. Each EUT is powered from a 50Hz AC source.

CISPR22/EN55022 CONDUCTED EMISSIONS

EMI test procedures are operated in accordance with the requirements of the CISPR22 (1993) and EN55022 (1987) Documents. Measurements are initially obtained with PEAK Detection. In addition, cables are arranged per the specification within constraints of a typical system configuration. All measured data exceeding 3 db below the Conducted QP Limit are retaken using QUASI-PEAK (CISPR) Detection. All measured data exceeding 2 db below the Conducted AVERAGE Limit are retaken using AVERAGE (CISPR) Detection. Each EUT is powered from a 50Hz AC source.

Appendix D

MEASUREMENT FACILITIES INFORMATION

DESCRIPTION of MEASUREMENT FACILITIES

The Open Area Test Site (OATS) is composed of a building and associated ground screen with a control room underneath.

The building is a TUFF-SPAN enclosure constructed of fiberglass reinforced plastic materials which provide above-ground weather protection. These materials are non conductive, non magnetic and RF transparent. They do not impact the surrounding electromagnetic environment and are corrosion resistant. The enclosure size permits Ten Meter Radiated Measurements within its confines and utilizes a remote controlled Macton Turntable Assembly. The conductive turntable is 16 feet in diameter and capable of moving a 10,000 pound load a full 360 degrees of rotation. It is flush-mounted to the ground screen and edge bonded circumferentially to the ground screen with beryllium copper "fingers". The ground screen is constructed of welded wire mesh lying directly on top of a concrete-over-steel foundation. The screen is extended beyond the building itself to provide 30 meter measurement capability when needed. There are no reflecting objects within the required obstruction free oval area.

The control room is located beneath the ground screen level with stairwell access to the ground plane area. An elevator is located beyond the ground screen and provides access to the control room, shipping dock and ground screen areas for large sized EUT's. Primary power cabling to the EUT is fed through a hole in the center of the table along with necessary EUT/Support Equipment interface cabling. A remote controlled EMCO Antenna Mast Assembly is located on the ground screen. It provides the operator with adjustable antenna height over the 1 meter through 4 meter range as well as allowing both horizontal and vertical polarizations at any height.

A conducted emissions measurement area is located in a shielded room and consists of a conductive (galvanized sheet metal) wall 20' wide x 8' high with a metal floor bonded to the wall. AC Power is supplied through receptacles located on the vertical wall. Each receptacle is adequately filtered using Shielded Room EMI Power Line Filters (Rayproof 1B42 Units) which provide 100 db attenuation over the 14KHz to 10GHz frequency range. The shielded room itself is bonded directly to earth ground.

Additionally, both the control room/shielded rooms and ground plane area have heating, air conditioning and relative humidity controlled environments.

Capability

Test Site Service's open area Test Sites have been evaluated in accordance with ANSI C63.4 procedures and found to be in compliance with ANSI C63.4-(1992) Site Attenuation and LISN requirements.

In addition, Test Site Services is Assessed and Approved annually by a European Competent Body to assure competence in testing products for CE Mark Compliance (Emissions and Immunity).

All of Test Site Service's measurement facilities meet the technical requirements for qualification testing of products to FCC, CISPR, IEC, VCCI, BSMI and other International Standards.

Accreditation / Approval

- FCC Registered
- VCCI Registered
- BSMI Accreditation
- NVLAP Accredited
- AUSTEL Listed
- New Zealand Approved (Ministry of Commerce)
- Competent Body Assessment / Approval (Technology International, UK)
- Sub-Accredited by Hewlett-Packard (Mass. Medical Environmental Test Lab.)
- NARTE certified EMC Engineers / Personnel

Thank you for choosing to use the Test Site Services EMC test facilities to test your product. Client satisfaction is very important to Test Site Services. To help serve you fully and continue to make improvements in our service, we need your feedback and comments on the service we performed for you today. We would appreciate your taking a few moments to complete this questionnaire.

1. Did scheduling meet your needs _____
2. Test operator support _____
3. Personnel attitude _____
4. Efficiency of test process _____
5. Work completed in a timely manner _____
6. Report received in a timely manner _____
7. Report content and clarity _____
8. Overall rating _____
