

DESCRIPTION OF PRODUCT AND PRODUCT OPERATION

The American Target Systems, Inc. "SkeetPro" Lightning is intended to replace the normal field cord and button switch system to activate automated clay pigeon throwing devices known to the industry as "Trap Machines". In the clay target game of "Skeet" there are two such trap machines commonly known as the "High House" and the "Low House". The "SkeetPro" Lightning will be connected to the target release circuit of both machines respectively. This will enable the referee on the shooting field to release clay pigeons on command from the "High House" or "Low House" without pulling a 125 foot cord around the shooting field.

The principle product benefits will be eliminating the field cord and all maintenance thereof, and greatly increased convenience for the players of the game and referee's as they will not have to negotiate walking around a 125 foot cord laying across the shooting field.
