

2.6 MAXIMUM PERMISSIBLE EXPOSURE (MPE)

Test Summary	
Test Lab: MPB Technologies Inc. Ottawa Test Personnel: D. Zanette Test Date: February 4, 2000	Product: BST300 Cellular Booster

Test Description	
Objectives/Criteria	Specifications
For devices to be operated more then 20 cm from the users body, the equipment shall not exceed that listed in the table.	Power Density Requirements,FCC Part 1.1310 Frequency mW/cm ² 0.3 – 1.34 (100) 1.24 – 30 (180/f ²) 30-300 0.2 300-1500 f/1500 1500-10000 1
Test Result: PASS	
Comments: Limit distance is at 8.8 inches (20 cm) from antenna. Statement to be incorporated shall read as follows: Both magnetic and glass mount antenna were evaluated. The glass mount antenna being worst case must be mounted in a location that will provide a minimum of 12 inches (30 cm) separation between it and vehicle occupants in order to meet the MPE (Maximum Permissible Exposure) limit and requirements in accordance with FCC CFR 47 Part 1.1301. The maximum permissible power output limit is at 8 inches (20 cm) from the antenna, this is equivalent to 0.549 mW/cm². Max Output measured at 824 MHz was 0.194 mW/cm² at 12 inches (30 cm) . Refer to Test Report Data sheets for more detail. All measurements were performed while the EUT was transmitting a CW signal which is deemed to be worst case. No duty cycle correction factors for TDMA (DWX) were applied.
