2 General Information

The following Class 2 permissive change report is prepared on behalf of Harris Corporation in accordance with the Federal Communications Commission and Industry Canada Rules and Regulations. The Equipment Under Test (EUT) was the MASTR V Base Station; FCC ID: OWDTR-0158-E, IC: 3636B-0158.

All measurements contained in this application were conducted in accordance with FCC Rules and Regulations CFR 47 Parts 2 and 90, and ISED RSS-119. Calibration checks are performed regularly on the instruments, and all accessories including high pass filter, coaxial attenuator, preamplifier and cables.

2.1 Test Facility

The open area test site and conducted measurement facility used to collect the radiated data is located on the parking lot of Rhein Tech Laboratories, Inc. 360 Herndon Parkway, Suite 1400, Herndon, Virginia 20170. This site has been fully described in a report submitted to, and approved by, the Federal Communications Commission to perform AC line conducted and radiated emissions testing.

2.2 Related Submittal(s)/Grant(s)

The original FCC grant and ISED certificate were issued January 5, 2018.

2.3 Change Description

- Parts obsolescence issue with amplifiers in the TX chain
- Addition of HVD Emission Designators for 800 MHz SMR and NPSPAC

All the radio performance and functionality remain the same, including gain levels, TX power and clock frequencies; the approved antennas and all accessories remain the same as well.

2.4 Tested System Details

The test sample was received on August 27, 2018. Listed below are the identifiers and descriptions of all equipment, cables, and internal devices used with the EUT for this test, as applicable.
