FCC Certification Report

**L3Harris Technologies
221 Jefferson Ridge Parkway
Lynchburg, VA 24501**

Model: XL-90D

FCC ID: OWDTR-0167-E

November 2, 2022

Standards Referenced for this Report	
Part 2: 2021	Frequency Allocations and Radio Treaty Matters; General Rules and Regulations
Part 24: 2021	Personal Communications Services
ANSI C63.26-2015	American National Standard for Compliance Testing of Transmitters Used in Licensed Radio Services

Report Prepared By: Daniel Baltzell

Document Number: 2022085PCB

I, the undersigned, hereby declare that the equipment tested and referenced in this report conforms to the identified standard(s) as described in this test report. No modifications were made to the equipment during testing in order to achieve compliance with these standards. Furthermore, there was no deviation from, additions to, or exclusions from the standards referenced above.

Signature: 

Date: November 2, 2022

Typed/Printed Name: Desmond A. Fraser

Position: President

*This report may not be reproduced, except in full, without the full written approval of Rhein Tech Laboratories, Inc. and L3Harris Technologies. Test results relate only to the item tested.
This report replaces R1.1.*

*These tests are accredited and meet the requirements of ISO/IEC 17025 as verified by ANAB.
Refer to certificate and scope of accreditation AT-1445.*

FCC Equipment Class: PCB

FCC Rule Part	Frequency Range (MHz)	Conducted Output Power (W)	Frequency Tolerance (ppm)	Emission Designator	Transmit Mode

2 General Information

The following Certification Report is prepared on behalf of L3Harris Technologies in accordance with the Federal Communications Commission. The Equipment Under Test (EUT) was the XL-90D; FCC ID: OWDTR-0167-E.

All measurements contained in this application were conducted in accordance with the applicable sections of FCC Rules and Regulations CFR 47 Parts 2 and 24. Calibration checks are performed regularly on the instruments, and all accessories including high pass filter, coaxial attenuator, preamplifier and cables.

2.1 Test Facility

The open area test site and conducted measurement facility used to collect the radiated data is located on the parking lot of Rhein Tech Laboratories, Inc. 360 Herndon Parkway, Suite 1400, Herndon, Virginia 20170.

2.2 Related Submittal(s)/Grant(s)

This is an original certification application for L3Harris Technologies Model XL-90D, FCC ID: OWDTR-0167-E.

2.3 Grant Notes

TBD

2.4 Tested System Details

The test sample was received on August 16, 2022. Listed below are the identifiers and descriptions of all equipment, cables, and internal devices used with the EUT for this test, as applicable.

The device was programmed for multiple modes of operation and modulation types.

Table 2-1: Equipment Under Test (EUT)

Part	Manufacturer	Model	PN/SN	FCC ID	RTL Bar Code
Modem	L3Harris Technologies	XL-90D	A40333E1C001	OWDTR-0167-E	24115

2.5 Configuration of Tested System

* EUT power input range is 9 to 57 VDC. 12 VDC was used for all testing except frequency stability vs temperature.

Figure 2-1: Configuration of Tested System

3 FCC Part 2.1033(C)(8): Voltages and Currents through the Final Amplifying Stage

22 VDC / 0.53 A

9 VDC / 1.349

4 FCC Part 2.1046(a): RF Power Output: Conducted; Part 24.132(a)/(b): Power and antenna height limits;

4.1 Test Procedure

ANSI C63.26, section 5.2

The EUT was connected to a coaxial attenuator having a 50 Ω load impedance. Manufacturer's rated power: 3.0 W.

4.2 Test Data

Table 4-1: RF Conducted Output Power – Measured

Frequency (MHz)	Rated Power (dBm)	Rated Power (W)	High Power (dBm)	High Power (W)	Low Power (dBm)	Low Power (W)
901.9750	35.1	3.2	34.8	3.0	27.1	0.5
940.9750	34.3	2.7	34.4	2.7	27.1	0.5

Notes: Data presented is for analog mode. All other modes were investigated and found to have equivalent power within measurement tolerances.

Measurement uncertainties shown for these tests are expanded uncertainties expressed at the 95% confidence level using a coverage factor K=2. Measurement uncertainty: ± 0.8 dB

Results: Pass

---	-----------	---------------------------------

5 FCC Part 2.1051: Spurious Emissions at Antenna Terminals; Part 24.133: Emission Limits

5.1 Test Procedure

ANSI C63.26, Section 5.7

The transmitter is terminated with a $50\ \Omega$ load and interfaced with a spectrum analyzer.

Device with digital modulation: Modulated to its maximum extent using a pseudo-random data sequence.

5.2 Test Data

Frequency range of measurement per Part 2.1057: 9 kHz to $10 \times F_c$

Limits: $(43+10\log P(W))$ for wideband and $50 + 10 \log P(W)$ for narrowband

The following channels (in MHz) were investigated: 901.9750 and 940.9750.

Both high and low power settings were checked; high power was found to be worst case and is presented. Data is only presented for frequencies above 20 dB below the limit. All modes were investigated and no other emissions were found within 20 dB below the limit.

Plot 5-1: Conducted Spurious Emissions – 901.9750 MHz

Plot 5-2: Conducted Spurious Emissions – 940.9750 MHz

Measurement uncertainties shown for these tests are expanded uncertainties expressed at the 95% confidence level using a coverage factor K=2. Measurement uncertainty: ± 0.8 dB

Results: Pass

6 FCC Part 2.1053(a): Field Strength of Spurious Emissions; Part 24.133: Emission Limits

6.1 Test Procedure

ANSI C63.26 section 5.5

The device uses digital modulation modulated to its maximum extent using a pseudo-random data sequence.

The spurious emissions levels were measured, and the device under test was replaced by a substitution antenna connected to a signal generator. This signal generator level was then corrected by subtracting the cable loss from the substitution antenna to the signal generator, and the gain of the antenna (dBi) was added to achieve the EIRP level, then converted from the corrected signal generator level (dBm) to dBc and compared to the limit.

6.2 Test Data

Table 6-1: Field Strength of Spurious Radiation – 901.9750 MHz

Conducted Power 34.8 dBm; 3 W; Limit = $43 + 10 \log P = 47.8$ dBc

Frequency (MHz)	Spectrum Analyzer Level (dBuV)	Signal Generator Level (dBm)	Cable Loss to Transmit Antenna (dB)	Substitution Antenna Gain (dBi)	Corrected Signal Generator Level (dBc)	Margin (dB)

7 FCC Part 2.1049(c)(1): Occupied Bandwidth; Part 24.131, Part 24.133(a)(1),(2): Authorized Bandwidth;

Occupied Bandwidth - Compliance with the Emission Masks

7.1 Test Procedure

ANSI C63.26-2015, section 5.4

Device with digital modulation: Modulated to its maximum extent using a pseudo-random data sequence.

Part 24.131 Authorized Bandwidth

The authorized bandwidth of narrowband PCS channels will be 10 kHz for 12.5 kHz channels and 45 kHz for 50 kHz channels. For aggregated adjacent channels, a maximum authorized bandwidth of 5 kHz less than the total aggregated channel width is permitted.

Part 24.133 Emission Limits

(1) For transmitters authorized a bandwidth greater than 10 kHz:

(i) On any frequency outside the authorized bandwidth and removed from the edge of the authorized bandwidth by a displacement frequency (f_d in kHz) of up to and including 40 kHz: at least $116 \log_{10} ((f_d + 10)/6.1)$ decibels or 50 plus $10 \log_{10} (P)$ decibels or 70 decibels, whichever is the lesser attenuation;

(ii) On any frequency outside the authorized bandwidth and removed from the edge of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 40 kHz: at least $43 + 10 \log_{10} (P)$ decibels or 80 decibels, whichever is the lesser attenuation.

(2) For transmitters authorized a bandwidth of 10 kHz:

(i) On any frequency outside the authorized bandwidth and removed from the edge of the authorized bandwidth by a displacement frequency (f_d in kHz) of up to and including 20 kHz: at least $116 \times \log_{10} ((f_d + 5)/3.05)$ decibels or $50 + 10 \times \log_{10} (P)$ decibels or 70 decibels, whichever is the lesser attenuation;

(ii) On any frequency outside the authorized bandwidth and removed from the edge of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 20 kHz: at least $43 + 10 \log_{10} (P)$ decibels or 80 decibels, whichever is the lesser attenuation.

(d) The following minimum spectrum analyzer resolution bandwidth settings will be used: 300 Hz when showing compliance with paragraphs (a)(1)(i) and (a)(2)(i) of this section; and 30 kHz when showing compliance with paragraphs (a)(1)(ii) and (a)(2)(ii) of this section.

7.2 Test Data

Plot 7-1: Occupied Bandwidth – 901.9750 MHz; C4FM; Mask 24.133(2)

Plot 7-2: Occupied Bandwidth – 901.9750 MHz; H-CPM (TDMA); Mask 24.133(2)

8 FCC Part 2.1055: Frequency Stability; Part 24.135: Frequency Stability

8.1 Test Procedure

ANSI C63.26, section 5.6

The carrier frequency stability is the ability of the transmitter to maintain an assigned carrier frequency.

The EUT was evaluated over the temperature range -30°C to +60°C.

Note: Though the frequency tested below is not within the Part 24 frequency allocations, it is representative of the frequency stability for the entire 900 MHz band.

The temperature was initially set to -30°C and a 1-hour period was observed for stabilization of the EUT. The frequency stability was measured within one minute after application of primary power to the transmitter. The temperature was raised at intervals of 10 degrees centigrade through the range. A ½-hour period was observed to stabilize the EUT at each measurement step and the frequency stability was measured within one minute after application of primary power to the transmitter. Additionally, the power supply voltage of the EUT was varied +/-15% nominal input voltage.

Part 24.135: Frequency Stability

- (a) The frequency stability of the transmitter shall be maintained within ± 0.0001 percent (± 1 ppm) of the center frequency over a temperature variation of -30° Celsius to +60° Celsius at normal supply voltage, and over a variation in the primary supply voltage of 85 percent to 115 percent of the rated supply voltage at a temperature of 20° Celsius.
- (b) For battery operated equipment, the equipment tests shall be performed using a new battery without any further requirement to vary supply voltage.
- (c) It is acceptable for a transmitter to meet this frequency stability requirement over a narrower temperature range provided the transmitter ceases to function before it exceeds these frequency stability limits.

8.2 Test Data

Table 8-1: Temperature Frequency Stability – 937.5 MHz

Temperature (°C)	Measured Frequency (Hz)	ppm
-30	937.500188	0.20
-20	937.500188	0.20
-10	937.500157	0.17
0	937.500157	0.17
10	937.500031	0.03

9 FCC Part 2.202: Necessary Bandwidth and Emission Bandwidth

C4FM Data/Voice (P25 Phase 1)

Calculation:

Data rate in bps (R) = 9600
 Peak deviation of carrier (D) = 1800
 $B_n = [9600/\log_2(4) + 2 (1800) (1)] = 8.400 \text{ kHz}$
 Emission designator: 8K40F1D, 8K40F1E

H-CPM (TDMA) Data/Voice (P25 Phase 2)

Calculation:

Data rate in bps (R) = 12000
 Peak deviation of carrier (D) = 1050
 $B_n = [12000/\log_2(4) + 2 (1050) (1)] = 8.1 \text{ kHz}$
 Emission designator: 8K10DXW

10 Conclusion

The data in this measurement report shows that the L3Harris Technologies XL-90D, FCC ID: OWDTR-0167-E, complies with the applicable requirements of Parts 2 and 24 of the FCC Rules.
