Filing for Equipment Authorization Branch

FEDERAL COMMUNICATIONS COMMISSION
FEE PROCESSING FORM

Please read instructions on back of this form before completing it. Section I **MUST** be completed. If you are applying for concurrent actions which require you to list more than one Fee Type Code, you must also complete Section II. This form must accompany all payments. Only one Fee Processing Form may be submitted per application or filing. Please type or print legibly. All required blocks must be completed or application/filing will be returned without action.

SECTION I

APPLICANT NAME (Last, first, middle initial)

Ericsson GE Mobile Communications, Inc.

MAILING ADDRESS (Line 1) (Maximum 85 characters - refer to Instruction (2) on reverse of form)

Mountain View Road

MAILING ADDRESS (Line 2) (if required) (Maximum 85 characters)

CITY

Lynchburg

STATE OR COUNTRY (if foreign address)

Virginia

ZIP CODE

24502

CALL SIGN OR OTHER FCC IDENTIFIER (if applicable)

AXATR-329-A2

Enter in Column (A) the correct Fee Type Code for the service you are applying for. Fee Type Codes may be found in FCC Fee Filing Guides. Enter in Column (B) the Fee Multiple, if applicable. Enter in Column (C) the result obtained from multiplying the value of the Fee Type Code in Column (A) by the number entered in Column (B), if any.

(A)	(B)	(C)										
FEE TYPE CODE	FEE MULTIPLE (if required)	FEE DUE FOR FEE TYPE CODE IN COLUMN (A)	FOR FCC USE ONLY

Attention; Equipment Authorization Branch

Subject; Type Acceptance Application for FCC ID: AXATR-329-A2

Gentlemen,

Ericsson GE Mobile Communications Inc. requests a Grant of Authorization for the subject equipment.

The Station transceiver submitted in this filing operates in the 851-870 Mhz frequency range. This base station is capable of operation in both conventional, trunked and digital voice guard modes as shown in Exhibit 10E. Additionally, this station will operate in the NPSPAC 866 -869 MHz range and meets the requirements for operation in that frequency range.

The transmitter and receiver utilize common printed circuit boards, so a single identifier will be used for both.

Sincerely,

John P. Rothgeb
Specialist, Regulatory Projects
Telephone: (804) 528-7476

APPLICANT:
ERICSSON GE MOBILE COMMUNICATIONS INC.

FCC ID NO.
AXATR-329-A2

DESCRIPTION

2.983 (c) The transceiver is being prepared for quantity production.

2.983 (d) This MASTR III Station Transmitter is a synthesizer controlled, direct FM modulated transmitter designed to operate in the 851 MHz to 870 MHz frequency band. The transmitter consists of a solid-state synthesizer-exciter and power amplifier. The RF power output is adjustable from 50-100 Watts.

Options available as follows:

- A. Type 90/99 Tone Encoder
- B. DTMF Encoder
- C. Remote Alarm
- D. GE*STAR
- E. 9600 Baud Data
- F. Channel Guard
- G. Digital Channel Guard

(1) Type of Emission: 16KOF3E, 15KOF2D, 15KOF2B, 16KOF1D, 16KOF1E, 14KOF3E, 13KOF2D, 13KOF2B, 15KOF1D, and 15KOF1E.

(2) Frequency Range and Frequency Stability: 851-870 MHz ± 1.0 ppm

(3) Range of Operating Power:

The power amplifier consists of broadband, fixed-tuned power IC's and transistor stages.

The RF power output is regulated by sensing variations in the forward power that is fed to the antenna from the final RF power amplifier and adjusting the voltage on the earlier stage to hold the forward power constant.

(4) Maximum Power Ratings: 100 Watt Tx

Input Maximum	400 Watts
Output Maximum	100 Watts

(5) Final Amplifier Voltage and Current in normal operation:
(Power rated is for two devices in the output stage.)

100 Watts

Collector Voltage	26.8 Volts DC
Collector Current	12 Amps DC

ALIGNMENT PROCEDURE

RADIO TUNING PROCEDURE

1.0 SCOPE

This document outlines the procedure for transmitter turn-on and frequency set.

2.0 TEST EQUIPMENT

Audio Oscillator	HP201C
RF Power Meter	HP435A
Frequency Counter	RACAL-DANA 9919
Modulation Meter	HP8901A
Power Meter	Bird 6154
RS-232 Computer Terminal	IBM Compatible with "MDIA" software

3.0 TURN-ON PROCEDURE

The system board loads the transmit and receive frequency code to the Tx and Rx synthesizer boards of the 800 MHz station.

Upon power up or reset, the microcontroller loads the receive synthesizer with 32 bits of serial data that sets the local oscillator to the desired frequency. A fault indication is provided by the receive synthesizer and sampled by the microcontroller. If the synthesizer is not locked onto frequency (fault flag true) the microcontroller will initiate another load sequence until lock occurs.

Upon a PTT, the microcontroller loads the transmit synthesizer with 32 bits of serial data that sets the transmit carrier to the proper frequency. A fault indication is provided by the transmit synthesizer and sampled by the microcontroller. If the synthesizer is not locked onto frequency, the microcontroller will not key the RF power amplifier, and will initiate another load sequence until lock occurs. It should be noted that the power amplifier will not be keyed as long as the synthesizer is unlocked.

ERICSSON GE MOBILE COMMUNICATIONS INC.

FCC ID NO.
AXATR-329-A2

CIRCUIT & DEVICE DESCRIPTIONS

2.983 (d) (10-11)

- (10) Oscillator and Other Frequency Stabilizing Circuit
Descriptions:

Reference Oscillator

The reference oscillator is a self-contained high stability reference generator which supplies 12.8 MHz to transmitter and receiver synthesizers in the 800 MHz system.

The oscillator module is located in the receive synthesizer. The module is a quartz crystal controlled oscillator with temperature compensation providing ± 1.0 ppm over a wide temperature range. Measured performance for temperature and supply voltage is shown in Exhibit 12. Reference for the transmitter is coupled from the receive synthesizer module by an external coax cable. The oscillator is supplied by an outside vendor (TOYCOM). The vendor catalogue and our purchase part drawing are shown in Exhibit 4.

The oscillator frequency is adjusted by a trimmer capacitor for frequency setability of less than ± 0.1 ppm.

- (11) Circuits or Devices Employed for Suppression of Spurious Radiation:

The transmit synthesizer board uses a casting on top and bottom side of the board. A lowpass filter is used to reject out-of-band spurious frequencies of the exciter output stage at J2. Tuned circuits are utilized in the input and output of the final amplifier along with a lowpass harmonic filter (part of the isolator assembly) which follows the final amplifier output to suppress harmonics of the carrier frequency.

APPLICANT:
ERICSSON GE MOBILE COMMUNICATIONS INC.

FCC ID NO.
AXATR-329-A2

CIRCUIT & DEVICE DESCRIPTIONS

The PA is totally encased in a shielded enclosure. RF enters and exits through bulkhead RF connectors.

Circuits or Devices Employed for Limiting Modulation:

The audio processing circuitry has three high gain integrated circuit audio amplifiers with appropriate feedback. The first stage (U1A) of the limiter and post limiter filters provides preemphasized gain and limiting. Amplitude limiting of the audio occurs when diodes conduct and produce 100% feedback, thereby amplitude limiting the input signal.

Active filters provide 18 dB per octave attenuation beginning at 2.8 kHz for post limiter filtering. Measured characteristics are shown in Exhibit 9.

2.983 (d) (12) GETC Filters:

The filters on the GETC used to perform wave shaping on the digital and audio signals include the low speed data encode filter, the low speed data decode filter and high speed data filter.

The low speed data decode filter is used to low pass the subaudible signalling and eliminate voice audio in order that the low speed data can be detected by the microcomputer.

The high speed data filter is a GMSK filter used to filter the 9600 baud NRZ signalling used by the GETC.

APPLICANT:
ERICSSON GE MOBILE COMMUNICATIONS INC.

FCC ID NO.
AXATR-329-A2

RF POWER OUTPUT

2.985 (a) The RF power measured at the output terminals:

AXATR-329-A2 100 Watts

The measurement was made per EIA RS-152B using the following equipment:

Radio Frequency 50 ohm load attached to the output terminal through directional coupler P-910-20. The power is measured on a HP436A power meter.

APPLICANT:
ERICSSON GE MOBILE COMMUNICATIONS INC.

FCC ID NO.
AXATR-329-A2

MODULATION CHARACTERISTICS

Reference Paragraph 2.987 (a, b, d) the frequency and amplitude response to audio inputs measured per EIA RS-152B, Paragraph 7.3 are shown on the following sheets.

Exhibit 9B	Audio Frequency Response
Exhibit 9C	Post Limiter Frequency Response *
Exhibit 9D	Modulation Versus modulation Input Voltage
Exhibit 9E	Data Filter Response
Exhibit 9F	Modulation Versus Modulation Input voltage NPSPAC

Equipment used was:

Hewlett Packard Modulation Analyzer	HP8901A
Hewlett Packard Audio Analyzer	HP8903A
Hewlett Packard Power Meter	HP436A
Weinschel Power Attenuator	49-30-34

At those modulation frequencies at which the transmitter is not capable of producing 30% of system deviation, audio response is calculated from measurement of input voltage producing a lesser deviation.

* Post Limiter Filter Response Measurement Procedure

1. Adjust transmitter deviation according to tune-up procedure.
2. Disconnect internal microphone and any input to the external microphone input.
3. Connect Hewlett Packard modulation analyzer to transmitter output through directional coupler.

Connect HP audio analyzer to the microphone input.

Connect HP audio analyzer to the audio output of modulation analyzer.
4. Apply 13.8 volts to the power input and key the transmitter.
5. Set the frequency of the HP audio analyzer to 1 kHz. Increase the output voltage until the transmitter is deviating 3 kHz.
6. Measure the audio output voltage. This is the reference voltage.
7. Keeping the HP audio analyzer output level constant, sweep the frequency from 10 kHz to over 50 kHz. Record the output voltage versus frequency.
8. Plot 20 log (audio output level/reference voltage) versus frequency normalized to a 6 dB per octave curve.

OCCUPIED BANDWIDTH

Per 2.989 (c, 1) the measurements were made per EIA RS-152B, Paragraph 17.3.1, and were used to obtain the results in Exhibits 10B-10I Modulated Sideband Spectrum.

Exhibit 10B	Modulated with 2500 Hz.
Telephony	Bn = $2M + 2DK$ [where $M = 3000$ Hz, $D = 5000$ Hz, and $K = 1$ (assumed)] Bn = 16000 Hz, Emission Designator = 16K0F3E
Exhibit 10C	Modulated with DTMF Digit 3, (1477/697 Hz).
Telemetry	Bn = $2M + 2DK$ [where $M = 2500$ Hz, $D = 5000$ Hz, and $K = 1$ (assumed)] Bn = 15000 Hz, Emissions Designator = 15K0F2D.
Exhibit 10D	Modulated with GE*STAR ID #100 (Manchester Encoding 1600 Hz).
Telegraphy	Bn = $2M + 2DK$ [where $M = 2500$ Hz, $D = 5000$ Hz, and $K = 1$ (assumed)] Bn = 15000 Hz, Emissions Designator = 15K0F2B.
Exhibit 10E	Modulated with Pseudorandom Data 9600 Baud.
Digital	Bn = $2(B/2) + 2DK$ [where $B = 9600$ Bd, $D = 3200$ Hz, and $K = 1$ (assumed)]
Data,	
Direct FM	Bn = 16000 Hz, Emissions Designator = 16K0F1D (Data Transmission) 16K0F1E (Digital Voice).
Exhibit 10F	Modulated with 2500 Hz.
Telephony	Bn = $2M + 2DK$ [where $M = 3000$ Hz, $D = 4000$ Hz, and $K = 1$ (assumed)] Bn = 14000 Hz, Emission Designator = 14K0F3E
Exhibit 10G	Modulated with DTMF Digit 3, (1477/697 Hz).
Telemetry	Bn = $2M + 2DK$ [where $M = 2500$ Hz, $D = 4000$ Hz, and $K = 1$ (assumed)] Bn = 13000 Hz, Emissions Designator = 13K0F2D.
Exhibit 10H	Modulated with GE*STAR ID #100 (Manchester Encoding 1600 Hz).
Telegraphy	Bn = $2M + 2DK$ [where $M = 2500$ Hz, $D = 4000$ Hz, and $K = 1$ (assumed)] Bn = 13000 Hz, Emissions Designator = 13K0F2B.
Exhibit 10I	Modulated with Pseudorandom Data 9600 Baud.
Digital	Bn = $2(B/2) + 2DK$ [where $B = 9600$ Bd, $D = 2700$ Hz, and $K = 1$ (assumed)]
Data,	
Direct FM	Bn = 15000 Hz, Emissions Designator = 15K0F1D (Data Transmission), 15K0F1E (Digital Voice).

SPURIOUS EMISSIONS

Reference 2.991 spurious emissions at the antenna terminals (conducted) when properly loaded with an appropriate artificial antenna were measured per EIA RS-152B, Paragraph 4.3.

Results are as shown in the following Exhibits:

<u>Exhibit</u>		<u>Carrier Frequency</u>
11B	AXATR-329-A2	851 MHz, 50 Watts
11C	AXATR-329-A2	851 MHz, 100 Watts
11D	AXATR-329-A2	870 MHz, 50 Watts
11E	AXATR-329-A2	870 MHz, 100 Watts

Equipment used was:

Hewlett Packard Spectrum Analyzer 8566B.

Reference 2.993 field strength of spurious radiations was measured on our three meter range. The site and equipment are described in the site description and attenuation measurements for the Ericsson/GE three meter radiation site #2 filed with the FCC in Columbia, Maryland, in November of 1990. The measurement procedure is per EIA RS-152B, but done on a three meter test site. Results are shown on the following Exhibits:

<u>Exhibits</u>		<u>Carrier Frequency</u>
11F	AXATR-329-A2	851 MHz, 50 Watts
