Declaration on Radiation Safety Standard Conformance

Wireless Solutions Sweden AB
Rissneleden 138
Box 2043
174 02 Sundbyberg
Sweden

Declares that the following product:

LSE 044, Bluetooth 2.4GHz Palm Adapter,

have an EIRP of less than 2,5 mW, which means that the worst case prediction of power density (100% reflection) at 1cm distance (worst case) could be calculated as follows:

$$S = \text{EIRP} / (4 * \pi * R^2) \quad (\text{Power density without reflection})$$

$$S = (4 * \text{EIRP} / (4 * \pi * R^2)) \quad (\text{Power density with 100\% reflection})$$

$$S = (4 * \text{EIRP} / (4 * \pi * R^2)) = 2,5 \text{ mW} / \pi * (1\text{cm})^2 = 0,79\text{mW/cm}^2 \text{ (limit} = 1,0\text{mW/cm}^2)$$

This means that according to the supplement C (edition 97-01) to OET Bulletin 65 (edition 97-01) [1] the equipment fulfills the requirements on power density for general population/uncontrolled exposure and therefore fulfills the requirement of FCC Part 15.247(b)4.

Sundbyberg, 09 August 2001

Tomas Blom

Manager RF Design

Wireless Solutions Sweden AB
