TPMS Sensor S5.xP Dual Band

Model: TMSS5G2

Due to customer requests for the use of different valve types, the PCBA can be assembled with the battery in 3 housing options: S5.5P, S5.1P and S5.2P. The inner workings of the housings are always identical and only the external appearance differs due to the valve mounting interface. The plastic housing has no influence on the EMC properties, nor does the housing color.

### Housing option **S5.5P**

for TPMS Metal Valves with variable angle
