1 General information

1.1 Notes

The test results of this test report relate exclusively to the test item specified in 1.5.
The CETECOM ICT Services GmbH does not assume responsibility for any conclusions and generalisations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item. The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of the CETECOM ICT Services GmbH.

(for reference numbers see test equipment listing)

17 – 24; 64; 52-63

1.5 Test item

Type of equipment : RF wireless headphones
Type designation : SBC HC8440/37 consists of TX 8442/37 and RX 8445/37
SBC HC8430/37 consists of TX 8432/37 and RX 8435/37
Manufacturer : Uni-Art Precise Products Ltd
Street : 11-12/F, Yue Xiu Ind'l Bldg
City : Kwun Tong, Kowloon
Country : Hong Kong, China

Additional information :

Frequency : 914.0 – 915.0 MHz
Channel spacing : 1 MHz
Number of channels : 2
Antenna : Integrated $\lambda/4$ wire antenna
Emission designation : 250k0F3E
ERP : 91.5 dB μ V/m in 3m
Power supply : Tx: 120V/12V AC/DC Adapter
Rx: 3,0V DC by rechargeable batteries
Temperature range : +5°C - +45°C
Transmitter spurious : 36.1 dB μ V/m in 3m
Receiver spurious : 39.3 dB μ /m in 3m
Certification no USA : OYMHC8442
Certification no CANADA : 135M-SBCHC844237

DECLARATION OF COMPLIANCE: I declare that the testing was performed or supervised by me; that the test measurements were made in accordance with the above-mentioned Industry Canada standard(s); and that the equipment identified in this application has been subjected to all the applicable test conditions specified in the Industry Canada standards and all of the requirements of the standard have been met.

2 Technical test

2.1 Summary of test results

The radiated measurements are performed in vertical and horizontal plane in the frequency range from 9 kHz to 20 GHz in semi-anechoic chambers. The EUT is positioned on a non-conductive support with a height of 0.80 m above a conductive ground plane that covers the whole chamber. The receiving antennas conform with specifications ANSI C63.2-1996 clause 15 and ANSI C63.4-2003 clause 4.1.5. These antennas can be moved over the height range between 1.0 m and 4.0 m in order to search for maximum field strength emitted from EUT. The measurement distances between EUT and receiving antennas are indicated in the test set-ups for the various frequency ranges. For each measurement, the EUT is rotated in all three axes until the maximum field strength is received.

The wanted and unwanted emissions are received by spectrum analysers where the detector modes and resolution bandwidths over various frequency ranges are set according to requirement ANSI C63.4-2001 clause 4.2.

Antennas conform with ANSI C63.2-1996 item 15.

9 kHz - 30 MHz: Quasi Peak measurement, 200Hz/9kHz Bandwidth, passive loop antenna.

30 MHz - 200 MHz: Quasi Peak measurement, 120KHz Bandwidth, biconical antenna

200MHz - 1GHz: Quasi Peak measurement, 120KHz Bandwidth, log periodic antenna

>1GHz: Average, RBW 1MHz, VBW 10 Hz, wave guide horn

All measurement settings are according to FCC 15.35, 15.209.

The product fulfils also the requirements for CANADA RSS-210 Issue 5

All measurements of the TX were made with an AC power supply provided by the customer. The RX was measured with a fresh set of batteries.

No deviations from the technical specification(s) were ascertained in the course of the tests performed.

The system consists of two different TX/RX-combinations. The only difference is the build-in charging unit of the device SBC HC8440/37.

We measured this device as it represents the worst configuration.

FINAL VERDICT : PASS

2.2 Test report

2.2.1 Field Strength of Fundamental

§ 15.249

TEST CONDITIONS		MAXIMUM OUTPUT POWER (QUASI PEAK) ERP (dB μ V/m)		
Frequency (MHz)		914 MHz	915 MHz	
T _{nom} (23.0)°C	V _{nom} (115)V	91.5	90.7	
Measurement uncertainty		±3dB		

Quasi Peak

Measured at a distance of 3m
