Federal Communications Commission
Equipment Approval Services
PO Box 358315
Pittsburgh, PA 15251-5315

Dear Sir/Madam:

Enclosed you will find an application for Certification of a Sensor/Transmitter for the Alert System Model 1000, FCC ID: OZDMLTRNXSENSXMIT. Certification is requested to the requirements of Part 15, Subpart C of the Commission's rules. This application is being filed by Retlif Testing Laboratories on behalf of Miltronics Manufacturing Services, Inc. The applicable Certification Filing Fee and 731 Form have been submitted.

I trust that you will find the enclosed application to be complete; however, should you have any questions or require any additional information, please feel free to contact us.

Very truly yours,

RETLIF TESTING LABORATORIES

Scott Wentworth
Manager

Enc. (as stated)

APPLICANT Miltronics Manufacturing Services, Inc. 95 Krif Road Keene, NH 03431	MANUFACTURER Test Report No. R-3579N FCC ID: OZDMLTRNXSENSXMIT SAME
---	--

TEST SPECIFICATION: FCC Rules and Regulations Part 15, Subpart C, Para. 15.231

Test Report No. R-3579N

FCC ID: OZDMLTRNXSENSXMIT

TEST PROCEDURE: ANSI C63.4:1992

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

TEST SAMPLE DESCRIPTION

Test Report No. R-3579N

FCC ID: OZDMLTRNXSENSXMIT

BRANDNAME: Miltronics Manufacturing Services, Inc. MODEL: Alert System Model 1000
Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

_TYPE: Sensor/Transmitter for the Alert System Model 1000

Test Report No. R-3579N

FCC ID: OZDMLTRNXSENSXMIT

POWER REQUIREMENTS: 9Volt DC Battery

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

FREQUENCY OF OPERATION: 303.8MHz

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

_FCC ID: _OZDMLTRNXSENSXMIT

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

APPLICABLE RULE SECTION: Part 15, Subpart C, Section 15.201 General Requirements and
Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

15.231 Alternative Requirements

Test Report No. R-3579N

FCC ID: OZDMLTRNXSENSXMIT

TESTS PERFORMED

Duty Cycle Determination

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

TEST SAMPLE OPERATION

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

The EUT is battery operated and was tested with newly installed batteries. For testing purposes only,
Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

the EUT was configured to operate continuously, which required peak detector readings combined

Test Report No. R-3579N

FCC ID: OZDMLTRNXSENSXMIT

with the duty cycle factor to produce the required average reading. Normal operation of the EUT

Test Report No. R-3579N

FCC ID: OZDMLTRNXSENSXMIT

complies with the parameters required in Part 15, Subpart C, Section 15.231.

Test Report No. R-3579N

FCC ID: OZDMLTRNXSENSXMIT

TEST SAMPLE / TEST PROGRAM

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

- The transmitter is automatically activated and ceases transmission less than 5 seconds after

deactivation.

- The transmitter does not perform periodic transmissions at regularly predetermined intervals.

- The device can be employed for RC purposes involving security.

- The fundamental field strength at 303.8MHz did not exceed 5575.0 μ V/M (Average) at a test

distance of 3 meters. In addition, the requirements of section 15.35 for averaging pulsed

emissions and for limiting peak emissions were met.

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

- The field strength of harmonic and spurious emissions did not exceed $558\mu\text{V/M}$ or $500\mu\text{V/M}$

as applicable.

- The device operates at a frequency range of 303.8MHz. The bandwidth of emissions did not

exceed 0.25% of the operating frequency and was determined as follows:

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

Fundamental Frequency = 303.8MHz

0.25% of Center Frequency = 0.7595MHz

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

$$0.7595 \text{ divided by } 2 = 0.379\text{MHz}$$

Bandwidth Range = Fundamental Frequency + and - 0.379MHz

$$303.8\text{MHz} - 0.379\text{MHz} = 303.421\text{MHz}$$

$$303.8\text{MHz} + 0.379\text{MHz} = 304.179\text{MHz}$$

Bandwidth Range = ***303.421MHz - 304.179MHz***

- The device uses a permanently attached 7_" straight wire antenna.

- Radiated Emissions from the EUT were measured in all three axis. Worst case emissions

were found with the EUT in the vertical upright position, with the antenna pointed straight

up. This orientation is also the position in which the device will normally be installed. The

attached Radiated Emissions test data is representative of this worst case orientation.

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

TEST SAMPLE / TEST PROGRAM (continued)

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

DETERMINATION OF FIELD STRENGTH LIMITS

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

The field strength limits shown below were calculated as instructed in Section 15.231.

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

Fundamental Frequency: 303.8MHz

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

Where F is the frequency in MHz, the formula for calculating the maximum permitted fundamental

field strength for the band 260-470MHz, $\mu\text{V/m}$ at 3 meters is as follows:

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

41.6667(F) - 7083.3333 = Field Strength Limit ($\mu\text{V/m}$)

$$41.6667 \times 303.8 = 12658.343$$

12658.343 - 7083.3333 = 5575

Field Strength Limit = 5575 $\mu\text{V/m}$

The maximum permitted unwanted emission level is 20dB below the maximum permitted

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

fundamental level.

DETERMINATION OF DUTY CYCLE

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

The transmitter controls were adjusted to maximize the transmitted duty cycle. The analyzer was

set for a frequency span of 0Hz. The sweep time was then adjusted in order to display one full pulse

train. The transmitter on time was then summed and compared to the time for one full cycle in order

to obtain the duty cycle.

Transmitter On Time = 22.5 milliseconds (maximum)

Transmitter Cycle Time = 47.75 milliseconds

Transmitter Duty Cycle = 47.1 %

On Time divided by Cycle Time = Duty Cycle Factor

$$22.5 \text{ divided by } 47.75 = 0.471$$

0.471 converted to dB ($\text{LOG}_{10} .471$)20 = -6.5dB

Duty Cycle Factor

=

-6.5dB

Duty Cycle Factor Determination Plots are included with this application as a separate attachment.

FCC ID: OZDMLTRNXSENSXMIT

TEST SAMPLE / TEST PROGRAM (continued)

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

SPECTRUM ANALYZER DESENSITIZATION CONSIDERATIONS

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

Due to the nature of the emissions being measured, care was taken to ensure that the resolution

Test Report No. R-3579N
FCC ID: OZDMLTRNXSENSXMIT

bandwidth of the spectrum analyzer was adequate to provide accurate measurements. The following

formula was utilized:

Setting pulse desensitization equal to zero and utilizing the minimum observed pulse width of 1.4

milliseconds yields a minimum required bandwidth of 476 Hz. FCC specified bandwidths of 100kHz

and 1MHz were utilized below and above 1GHz, respectively.

GENERAL NOTES

1. All readings were taken utilizing a peak detector function at

a test distance of 3 meters.

2. The duty cycle was applied to the peak readings in order to

determine the average value of the emissions.

3. The frequency range was scanned from 30 MHz to 3.1 GHz.

Emission levels closest to the specified limit are listed on the

attached data sheet.
