1. Introduction

The G52.A.0616BN11 antenna is an ultra-flat antenna for Pit-Lid and similar applications. It was designed to perform in the LTE AT&T and Verizon bands 2, 4, 12 and 13. This is a custom antenna solution and enclosure for water meters and gas meters. The antenna performs on metallic surfaces and non-metallic surfaces although the data presented here is with the metallic plane.

When tested on a 300 mm by 300 mm metal plane, the G52 delivers efficiencies of 52% for B12, 40% for B13, 45% for B4 and 46% for B2. The G52 is designed to be through-hole mounted on metal or plastic surfaces. It is ideal for low profile and resistant to environment applications.

All testing was done at the San Diego engineering facility in the Howland 3100 Anechoic Chamber.
