Exhibit of Confidentiality

To Whom It May Concern:

Arrista Technologies would like the following submitted exhibits treated as confidential material:

- 1. Amplifier Schematic**
- 2. Block Diagram Amplifier**
- 3. Amplifier Parts Listing**
- 4. Operational Description**

The amplifier design, specifically, the gain control circuitry is of novel design and a US patent has been filed on it. As there is no other amplifier design that incorporates the gain control function the way the SG8-19 does, we believe that we have a competitive advantage over competing designs out in the market place.
