1.3 Theory of Operation

The SpotCell 250 Xe/250 He is a dual band (Cellular Band and PCS band) or split band (PCS band and PCS band) adaptive repeater, which operates in the 800MHz Cellular band and in the 1900MHz PCS bands, for indoor RF signal enhancement.

The indoor Coverage Unit (CU) consists of wide-band antenna and DC power connection.

The Donor Unit (DU) consists of two adaptive sub-modules, one for the Cellular band and another one for the PCS band. All the sub-modules are assembled in one PCB board.. The adaptive processor in the DU uses an IF frequency to perform gain control and filtering functions in both the downlink and uplink directions for the Cellular and PCS bands.

Section 1: Clause 22.913 Output Power

(a) Maximum ERP. In general, the effective radiated power (ERP) of base transmitters and cellular repeaters must not exceed 500 Watts.

Test Conditions:

Sample Number:	2	Temperature:	23 °C
Date:	January 10, 2006	Humidity:	36 %
Modification State:	0	Tester:	Roman Kuleba

Section 2: Clause 2-11-04/EAB/RF Occupied Bandwidth

Using an RBW of 300Hz or 1% of the emission bandwidth, The spectral shape of the output should look similar to the input for all modulations.

Test Conditions:

Additional Observations:

The occupied bandwidth was measured by comparison of input from the signal generator to the output signal from the amplifier. This was done in order to determine if there was any degradation to the output signal due to the amplification and conversion through the repeater.
