

Test report

286279-2TRFWL

Date of issue: September 4, 2015

Applicant:

Spotwave Wireless Limited

Product:

SpotCell 1000 Coverage Unit

Model:

100-10097-10

FCC ID:

P3YSPOTCELL0030

Specifications:

FCC 47 CFR Part 24

Personal communications services; Subpart E – Broadband PCS

FCC 47 CFR Part 22

Public Mobile Services; Subpart H – Cellular Radiotelephone Service

Test location

Company name	Nemko Canada Inc.
Address	303 River Road
City	Ottawa
Province	Ontario
Postal code	K1V 1H2
Country	Canada

Section 1. Report summary

1.1 Applicant and manufacturer

Company name	Spotwave Wireless Limited
Address	500 Van Buren St. Box 550
City	Kemptville
Province/State	ON
Postal/Zip code	K0G 1J0
Country	Canada

1.2 Test specifications

FCC 47 CFR Part 22	Public Mobile Services Subpart H – Cellular Radiotelephone Service
FCC 47 CFR Part 24	Personal communications services Subpart E – Broadband PCS
935210 D02 Signal Boosters Certification v02r01	Appendix D booster, amplifier, and repeater interim basic authorization procedures
KDB 935210 D04	Provider Specific Booster Measurements v01

1.3 Statement of compliance

In the configuration tested, the EUT was found compliant.

Testing was completed against all relevant requirements of the test standard. Results obtained indicate that the product under test complies in full with the requirements tested. The test results relate only to the items tested.

See “Summary of test results” for full details.

1.4 Exclusions

None

1.5 Test report revision history

Revision #	Details of changes made to test report
TRF	Original report issued

Section 2. Summary of test results

2.1 FCC Part 24 Subpart E test results

Part	Test description	Verdict
§24.232(a)(d)	EIRP limits	Pass
§24.238(a)(b)	Spurious emissions at the antenna terminal	Pass
§24.238(a)(b)	Field strength of spurious radiation	Pass
§24.235	Frequency stability	Not applicable
§2.0149	Occupied bandwidth	Pass

Note: EUT doesn't translate the signal

2.2 FCC Part 22 Subpart H test results

Part	Test description	Verdict
Clause 22.913(a)(b)	Effective radiated power limits	Pass
Clause 22.917(a)(b)	Out of band emissions at antenna terminal	Pass
Clause 22.917(a)(b)	Field strength of emissions	Pass
Clause 22.355	Frequency tolerance	Not applicable
Clause 2.1049	Occupied bandwidth	Pass

Note: EUT doesn't translate the signal

Section 3. Equipment under test (EUT) details

3.1 Sample information

Receipt date	June 1, 2015
Nemko sample ID number	133-000327

3.2 EUT information

Product name	SpotCell 1000 Coverage Unit
Model	100-10097-10
Serial number	A01507090A01270064

3.3 Technical information

Operating band	869–894 MHz DL (CELL band), 1930–1990 MHz DL (PCS band)
Modulation type	CDMA 1xRTT, CDMA 3xRTT, WCDMA, GSM, TDMA
Channel Spacing	Standard
Power requirements	115 V _{AC}
Emission designator	CDMA, F9W, GSM, GXW TDMA, FXD
Gain	15 dB
Antenna information	CELL band: 0 dBi nominal; 3 dBi maximum PCS band: 0 dBi nominal; 2 dBi maximum

3.4 Product description and theory of operation

The SpotCell 1000Xe adaptive system is capable of dual band and split band coverage and provides band-selective, on-frequency, in-building coverage in the Cellular and PCS bands.

3.5 EUT exercise details

The input signal from a signal generator was provided to EUT.

3.6 EUT setup diagram

Figure 3.6-1: Setup diagram

Table 3.6-1: Support equipment

Description	Manufacturer	Model/Part number	Serial number	Rev.
Power Supply	CINCON	TRG100A240-01E13 Level V	100240-023637	-

Section 4. Engineering considerations

4.1 Modifications incorporated in the EUT

There were no modifications performed to the EUT during this assessment.

4.2 Technical judgment

There was no control of the AGC. The end user has no ability to turn AGC off.

4.3 Deviations from laboratory tests procedures

No deviations were made from laboratory procedures.

Section 5. Test conditions

5.1 Atmospheric conditions

Temperature	15–30 °C
Relative humidity	20–75 %
Air pressure	860–1060 mbar

When it is impracticable to carry out tests under these conditions, a note to this effect stating the ambient temperature and relative humidity during the tests shall be recorded and stated.

5.2 Power supply range

The normal test voltage for equipment to be connected to the mains shall be the nominal mains voltage. For the purpose of the present document, the nominal voltage shall be the declared voltage, or any of the declared voltages $\pm 5\%$, for which the equipment was designed.

Section 6. Measurement uncertainty

6.1 Uncertainty of measurement

Measurement uncertainty budgets for the tests are detailed below. Measurement uncertainty calculations assume a coverage factor of $K = 2$ with 95% certainty.

Test name	Measurement uncertainty, dB
All antenna port measurements	0.55
Conducted spurious emissions	1.13
Radiated spurious emissions	3.78

Section 7. Test equipment

7.1 Test equipment list

Table 7.1-1: Equipment list

Section 8. Testing data

8.1 Clause 24.232(a) (d) Equivalent isotropically radiated power limits

8.1.1 Definitions and limits

(a)(1) Base stations with an emission bandwidth of 1 MHz or less are limited to 1640 watts equivalent isotropically radiated power (EIRP) with an antenna height up to 300 meters HAAT, except as described in paragraph (b) below.

(2) Base stations with an emission bandwidth greater than 1 MHz are limited to 1640 watts/MHz equivalent isotropically radiated power (EIRP) with an antenna height up to 300 meters HAAT.

(d) Power measurements for transmissions by stations authorized under this section may be made either in accordance with a Commission-approved average power technique or in compliance with paragraph (e) of this section. In both instances, equipment employed must be authorized in accordance with the provisions of §24.51. In measuring transmissions in this band using an average power technique, the peak-to-average ratio (PAR) of the transmission may not exceed 13 dB.

8.1.2 Test summary

Test date	June 2, 2015	Temperature	24 °C
Test engineer	Kevin Rose	Air pressure	1004 mbar
Verdict	Pass	Relative humidity	47 %

8.1.3 Observations, settings and special notes

There was no control of the AGC. The end user has no ability to turn AGC off.
Test receiver settings:

Detector mode	RMS (for average), Peak (for peak)
Resolution bandwidth	> OBW per modulation variation
Integration bandwidth	>OBW
Video bandwidth	>RBW
Trace mode	Power Average (for average), Max Hold (for peak)
Measurement time	Auto

8.1.4 Test data

Table 8.1-1: Peak to Average ratio results

Modulation	Frequency, MHz	RF output power AVG, dBm	RF output power Peak, dBm	Peak to Average Ratio, dB	Peak to Average Ratio Limit, dBm	Peak to Average Margin, dB
TDMA	1960	4.13	11.92	7.79	13.00	5.21
GSM	1960	4.13	13.25	9.12	13.00	3.88
CDMA 1xRTT	1960	4.16	12.80	8.64	13.00	4.36
CDMA 3xRTT	1960	4.31	12.54	8.23	13.00	4.77
WCDMA	1960	4.09	12.87	8.78	13.00	4.22

Table 8.1-2: EIRP results

Modulation	Frequency, MHz	RF output power AVG, dBm	Antenna Gain, dBi	EIRP, dBm	Limit, dBm/MHz	Margin, dBm
TDMA	1960	4.13	2.00	6.13	62.15	56.02
GSM	1960	4.13	2.00	6.13	62.15	56.02
CDMA 1xRTT	1960	4.16	2.00	6.16	62.15	55.99
CDMA 3xRTT	1960	4.31	2.00	6.31	62.15	55.84
WCDMA	1960	4.09	2.00	6.09	62.15	56.06

Note: The results were measured using a higher resolution bandwidth integrated power. 1 MHz limit is the lowest limit
The actual limit may be increased by $10 \times \text{Log}_{10}(\text{actual bandwidth} / 1 \text{ MHz})$

Figure 8.1-1: Conducted Average power example

Figure 8.1-2: Conducted Peak power example

8.2 Clause 22.913(a) Effective radiated power limits

8.2.1 Definitions and limits

The effective radiated power (ERP) of transmitters in the Cellular Radiotelephone Service must not exceed the limits in this section.

(a) Maximum ERP. In general, the effective radiated power (ERP) of base transmitters and cellular repeaters must not exceed 500 Watts (57 dBm). However, for those systems operating in areas more than 72 km (45 miles) from international borders that:

(1) Are located in counties with population densities of 100 persons or fewer per square mile, based upon the most recently available population statistics from the Bureau of the Census; or,

(2) Extend coverage on a secondary basis into cellular unserved areas, as those areas are defined in §22.949, the ERP of base transmitters and cellular repeaters of such systems must not exceed 1000 Watts (60 dBm). The ERP of mobile transmitters and auxiliary test transmitters must not exceed 7 Watts (38.45 dBm).

8.2.2 Test summary

Test date	June 2, 2015	Temperature	24 °C
Test engineer	Kevin Rose	Air pressure	1004 mbar
Verdict	Pass	Relative humidity	47 %

8.2.3 Observations, settings and special notes

There was no control of the AGC. The end user has no ability to turn AGC off.

Test receiver settings:

Detector mode	RMS (for average), Peak (for peak)
Resolution bandwidth	100 kHz
Integration bandwidth	>OBW
Video bandwidth	>RBW
Trace mode	Power Average (for average), Max Hold (for peak)
Measurement time	Auto

8.2.4 Test data

Table 8.2-1: ERP results

Modulation	Frequency, MHz	RF output power AVG, dBm	Antenna Gain, dBd	ERP, dBm	Limit, dBm	Margin, dBm
TDMA	881	4.05	0.85	4.90	57.00	52.10
GSM	881	4.17	0.85	5.02	57.00	51.98
CDMA 1xRTT	881	4.25	0.85	5.10	57.00	51.90
CDMA 3xRTT	881	4.18	0.85	5.03	57.00	51.97
WCDMA	881	4.26	0.85	5.11	57.00	51.89

Figure 8.2-1: Conducted Average power DL example

8.3 Clause 24.238(a) (b) Spurious emissions at antenna terminal

8.3.1 Definitions and limits

(a) Out of band emissions. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $43 + 10 \log(P)$ dB.

(b) Measurement procedure. Compliance with these rules is based on the use of measurement instrumentation employing a resolution bandwidth of 1 MHz or greater. However, in the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed. A narrower resolution bandwidth is permitted in all cases to improve measurement accuracy provided the measured power is integrated over the full required measurement bandwidth (i.e. 1 MHz or 1 percent of emission bandwidth, as specified). The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emissions are attenuated at least 26 dB below the transmitter power.

8.3.2 Test summary

Test date	June 2, 2015	Temperature	24 °C
