Laird Connectivity Test Services in Review

The Laird Connectivity, Inc. laboratory located at W66 N220 Commerce Court Cedarburg, Wisconsin, 53012 USA is recognized through the following organizations:

A2LA – American Association for Laboratory Accreditation

Accreditation based on ISO/IEC 17025:2017 with Electrical (EMC) Scope

A2LA Certificate Number: 1255.01

Scope of accreditation includes all test methods listed herein unless otherwise noted

Federal Communications Commission (FCC) – USA

Accredited Test Firm Registration Number: 953492

Recognition of two 3 meter Semi-Anechoic Chambers

Innovation, Science and Economic Development Canada

Accredited U.S. Identification Number: US0218

1 TEST REPORT SUMMARY

During **September 21, 2021 – October 13, 2021, & 1-2 December 2021** the Equipment Under Test (EUT), **InTouch DX G2 w/ HID Prox**, as provided by **Kronos Incorporated (UKG)** was tested to the following requirements:

FCC & ISED Canada

Requirements	Description	Specification	Method	Compliant
FCC: 15.207 IC: RSS-210	AC Power Line Conducted Emissions RFID	0.15 - 30 MHz	ANSI C63.10	Yes
FCC: 15.209 IC: RSS-210	Intentional Radiated Emissions RFID	9 kHz – 30 MHz 30 – 1000 MHz	ANSI C63.10	Yes
FCC: 15.209 IC: RSS-210	Simultaneous Transmissions RFID, WLAN, BT	9-150 kHz 0.15-30 MHz 30-1000 MHz 1-25 GHz	ANSI C63.10	Yes
FCC: 2.1049 IC: RSS-GEN (6.7)	Occupied Bandwidth RFID	Reported	ANSI C63.10	Reported

Notice:

The results relate only to the item tested as configured and described in this report. Any additional configurations, modes of operation, or modifications made to the equipment under test after the specified test date(s) are at the decision of the client and may not apply to the data seen in this test report.

The decision rule for Pass / Fail assessment to the specification or standard listed in this test report has been agreed upon by the client and laboratory to be as follows:

Measurement Type	Rule
Emissions – Amplitude	1 dB below specified limit
Emissions – Frequency	1% less than the specification
Immunity	Tested at specified level

2 CLIENT INFORMATION

Company Name	Kronos Incorporated (UKG)
Contact Person	Jigney Shah
Address	300 Chelmsford St Lowell, MA 01851

2.1 Equipment Under Test (EUT) Information

Product Name	InTouch DX G2 w/ HID Prox
Model Number	8610000-013
Serial Number	00J2054856
IEEE Address	004058116C0B1
IC ID	1416A-8610U003
FCC ID	P5W-8610U003

2.2 Product Description

The InTouch DX G2 timeclock is a data collection device that communicates with the UKG host applications. The timeclock collects information that employees enter using a badge reader, biometric device, or keypad. The host application software collects data from the timeclocks to track and process labor-related data, generate management reports, and transfer information to the payroll service.

2.3 Modifications Incorporated for Compliance

None noted at time of test

2.4 Deviations and Exclusions from Test Specifications

No test modes provided; device tested in its operational setup.

2.5 Additional Information

Device is powered by 120 VAC and has an ethernet cable protruding the back of the enclosure for LAN operation. All programing is done through end user, android interface. No additional programming control/test modes available at time of testing.

Simultaneous transmission testing done with EUT connected to WLAN via channel 6 (2437 MHz) and BT connected to headphones in hopping mode.

5 TEST DATA

5.1 Radiated Emissions

Description of Measurement	The frequency spectrum is investigated for intentional and / or unintentional signals emanating from the EUT by use of a standardized test site and measurement antenna. The antenna, cable, pre-amp, and other necessary measurement system correction factors are loaded onto the EMI receiver / spectrum analyzer when the measurements are performed allowing the data to be gathered and reported as corrected values. The maximum emissions from the EUT are determined by turn-table azimuth rotation (360°) and scanning of the measurement antenna. Maximized levels are noted at degree values of azimuth, measurement antenna height, and measurement antenna polarity.
Example Calculations	Measurement (dBμV) + Cable factor (dB) + Other (dB) + Antenna Factor (dB/m) = Corrected Reading (dBμV/m) Margin (dB) = Limit (dBμV/m) - Corrected Reading (dBμV/m) Example at 4000 MHz: Reading = 40 dBμV + 3.4 dB + 0.9 dB + 6.5 dB/m = 50.8 dBμV/m Average Limit = 20 log (500) = 54 dBμV/m Margin = 54 dBμV/m - 50.8 dBμV/m = 3.2 dB

5.2 AC Mains Conducted Emissions

A line impedance stabilization network (LISN) or artificial mains network (AMN) allows the emissions of the power supply conductors to be measured while isolating the EUT from the supply mains.

Description of Measurement

The AMN, cable, and other necessary measurement system correction factors are loaded onto the EMI receiver when the measurements are performed. The data is gathered and reported as the corrected values.

Maximum emissions are determined with a peak max hold trace then measurements at a selection of the highest points are made with quasi-peak and average detectors. Results are recorded and compared to limit for each line. (e.g. line and neutral)

Example Calculations

Measurement (dBμV) + Cable factor (dB) + Other (dB) = Corrected Reading (dBμV)

Margin (dB) = Limit (dBμV) - Corrected Reading (dBμV)
