Laird Connectivity Test Services in Review

The Laird Connectivity, LLC. laboratory located at W66 N220 Commerce Court Cedarburg, Wisconsin, 53012 USA is recognized through the following organizations:

A2LA – American Association for Laboratory Accreditation

Accreditation based on ISO/IEC 17025:2017 with Electrical (EMC) Scope

A2LA Certificate Number: 1255.01

Scope of accreditation includes all test methods listed herein unless otherwise noted

Federal Communications Commission (FCC) – USA

Accredited Test Firm Registration Number: 953492

Recognition of two 3 meter Semi-Anechoic Chambers

Innovation, Science and Economic Development Canada

Accredited U.S. Identification Number: US0218

Recognition of two 3 meter Semi-Anechoic Chambers

1 TEST REPORT SUMMARY

During **September 21, 2021 – October 26, 2021** the Equipment Under Test (EUT), **InTouch DX G2 w/ Legic SmartCard**, as provided by **Kronos Incorporated (UKG)** was tested to the following requirements:

FCC

Requirements	Description	Specification	Method	Compliant
FCC: 15.207 IC: RSS-210	AC Power Line Conducted Emissions	0.15 - 30 MHz	ANSI C63.10	Yes
FCC: 15.209 IC: RSS-210	Intentional Radiated Emissions	30 – 1000 MHz	ANSI C63.10	Yes
FCC: 15.225 IC: RSS-210	Operation within the band 13.110 – 14.010 MHz	9 kHz – 30 MHz	ANSI C63.10	Yes
FCC: 2.1049 IC: RSS-GEN (6.7)	Occupied Bandwidth	Reported	ANSI C63.10	Reported

Notice:

The results relate only to the item tested as configured and described in this report. Any additional configurations, modes of operation, or modifications made to the equipment under test after the specified test date(s) are at the decision of the client and may not apply to the data seen in this test report.

The decision rule for Pass / Fail assessment to the specification or standard listed in this test report has been agreed upon by the client and laboratory to be as follows:

Measurement Type	Rule
Emissions – Amplitude	0.9 dB below specified limit
Emissions – Frequency	1% less than the specification
Immunity	Tested at specified level

2 CLIENT INFORMATION

Company Name	Kronos Incorporated (UKG)
Contact Person	Jigney Shah
Address	300 Chelmsford St Lowell, MA 01851

2.1 Equipment Under Test (EUT) Information

Product Name	InTouch DX G2 w/ Legic SmartCard
Model Number	8610000-019
Serial Number	00J2054791
IEEE Address	00405816BE6D
IC ID	1416A-8610U009
FCC ID	P5W-8610U009

2.2 Product Description

The InTouch DX G2 timeclock is a data collection device that communicates with the UKG host applications. The timeclock collects information that employees enter using a badge reader, biometric device, or keypad. The host application software collects data from the timeclocks to track and process labor-related data, generate management reports, and transfer information to the payroll service.

2.3 Modifications Incorporated for Compliance

None noted at the time of test.

2.4 Deviations and Exclusions from Test Specifications

No test modes provided; device tested in its operational setup.

2.5 Additional Information

Device is powered by 120 VAC and has an ethernet cable protruding the back of the enclosure for LAN operation. All programing is done through end user, android interface. No additional programming control/test modes available at time of testing. Software version 4.0.0.

5 TEST DATA

5.1 Radiated Emissions

Description of Measurement	The frequency spectrum is investigated for intentional and / or unintentional signals emanating from the EUT by use of a standardized test site and measurement antenna. The antenna, cable, pre-amp, and other necessary measurement system correction factors are loaded onto the EMI receiver / spectrum analyzer when the measurements are performed allowing the data to be gathered and reported as corrected values. The maximum emissions from the EUT are determined by turn-table azimuth rotation (360°) and scanning of the measurement antenna. Maximized levels are noted at degree values of azimuth, measurement antenna height, and measurement antenna polarity.
Example Calculations	Measurement (dBμV) + Cable factor (dB) + Other (dB) + Antenna Factor (dB/m) = Corrected Reading (dBμV/m) Margin (dB) = Limit (dBμV/m) - Corrected Reading (dBμV/m) Example at 4000 MHz: Reading = 40 dBμV + 3.4 dB + 0.9 dB + 6.5 dB/m = 50.8 dBμV/m Average Limit = 20 log (500) = 54 dBμV/m Margin = 54 dBμV/m - 50.8 dBμV/m = 3.2 dB

Block Diagram

5.1.1 Radiated Emissions: 13.56 MHz RFID

Operator	Jon Dilley	QA	Alec Krabbe
Temperature	23.8 °C	R.H. %	47.0 %
Test Date	9/28/2021	Location	Chamber 3
Requirement	FCC 15.225 RSS-210	Method	ANSI C63.10

FCC 15.209 Limits:

Frequency (MHz)	Field Strength (μV/m)	Measurement Distance (m) (d_{limit})	Field Strength (dBμV/m) @ measurement distance
0.009-0.490	$2400/F(\text{kHz})^1$	300^3	Use F (kHz) 2
0.490-1.705	$24000/F(\text{kHz})^1$	30^3	Use F (kHz) 2
1.705-30	30	30^3	29.5

Note 1: F = measured frequency.

Note 2: Eq. 1 used to convert Field Strength (FS) to limit in dBμV/m.

Note 3: Conversion of measurement distance made using a combination of Eq. 2, Eq. 3, and Eq. 4.

FCC 15.225 Limits:

Frequency (MHz)	Field Strength (μV/m)	Measurement Distance (m) (d_{limit})	Field Strength (dBμV/m) @ measurement distance
13.553-13.567	15848	30	84.0
13.410-13.553	334	30	50.5
13.567-13.710	334	30	50.5
13.110-13.410	106	30	40.5
13.710-14.010	106	30	40.5
13.110-14.010 outside	15.209 limits	see 15.209	see 15.209

Test Parameters

Frequency	9 kHz – 30 MHz	Distance	3 m ($d_{measure}$)
Detector(s)	Quasi-Peak, Average	Table height	80 cm
RBW	200 Hz, 9 kHz	VBW	2 kHz, 90 kHz
Example Calculations	Eq. 1 $\text{dB}\mu\text{V/m}$ field strength conversion: $20 * \log \left(FS \left(\frac{\mu\text{V}}{\text{m}} \right) \right)$ Eq. 2 $d_{near\ field} = \frac{\lambda}{2\pi} \text{distance} = 47.77 / f_{\text{MHz}}$ If $d_{measure} < \frac{\lambda}{2\pi}$ and $d_{limit} > \frac{\lambda}{2\pi}$, the measurement shall be extrapolated using Eq. 3 Eq. 3 $FS_{limit} = FS - 40 * \log \left(\frac{d_{near\ field}}{d_{measure}} \right) - 20 * \log \left(\frac{d_{limit}}{d_{near\ field}} \right)$ If $d_{measure} \leq \frac{\lambda}{2\pi}$ and $d_{limit} \leq \frac{\lambda}{2\pi}$, the measurement shall be extrapolated using Eq. 4 Eq. 4 $FS_{limit} = FS - 40 * \log \left(\frac{d_{limit}}{d_{measure}} \right)$

Plot

5.2 AC Mains Conducted Emissions

A line impedance stabilization network (LISN) or artificial mains network (AMN) allows the emissions of the power supply conductors to be measured while isolating the EUT from the supply mains.

Description of Measurement

The AMN, cable, and other necessary measurement system correction factors are loaded onto the EMI receiver when the measurements are performed. The data is gathered and reported as the corrected values.

Maximum emissions are determined with a peak max hold trace then measurements at a selection of the highest points are made with quasi-peak and average detectors. Results are recorded and compared to limit for each line. (e.g. line and neutral)

Example Calculations

Measurement (dBμV) + Cable factor (dB) + Other (dB) = Corrected Reading (dBμV)

Margin (dB) = Limit (dBμV) - Corrected Reading (dBμV)
