

Exhibit P: Spurious RF Conducted Emissions

FCC ID: P6I-COPYCAM

Justification

The individuals and/or the organization requesting the test provided the modes, configurations and settings available to evaluate. All of the EUT parameters listed below were investigated. This includes, but may not be limited to, antennas, tuned transmit frequency ranges, operating modes, and data rates.

Description

The system was tested using special software developed to test all functions of the device during the test. This software allows the unit to be placed in a no hop mode and set to the low, mid, and high transmit channel

Equipment Modifications

No EMI suppression devices were added or modified. The EUT was tested as delivered.

Test Description

Requirement: Per 47 CFR 15.247(c), in any 100 kHz bandwidth outside the authorized band, the maximum level of radio frequency power must be at least 20dB down from the highest emission level within the authorized band. The measurement is made with the spectrum analyzer's resolution bandwidth set to 100 kHz, and the video bandwidth set to greater than or equal to the resolution bandwidth.

Configuration: The spurious RF conducted emissions were measured with the EUT set to low, medium, and high transmit frequencies. The measurements were made using a direct connection between the RF output of the EUT and the spectrum analyzer. The EUT was transmitting at its maximum output power and maximum data rate in a no hop mode. For each transmit frequency, the spectrum was scanned throughout the specified frequency.
