(C) Power Supply: 120V/60Hz

Test Procedure Used:

*FCC RULES AND REGULATIONS PART 18 CONSUMER DEVICES (1998)  
AND MP-5/1986*

The device described above is tested by Audix Technology (Shanghai) Co., Ltd. to determine the maximum emission levels emanating from the device. The maximum emission levels are compared to the FCC Part 18 RF Lighting Device limits both radiated and conducted emissions.

The test results are contained in this test report and Audix Technology (Shanghai) Co., Ltd. is assumed full responsibility for the accuracy and completeness of these measurements. Also, this report shows that the EUT to be technically compliant with the FCC official limits.

This report applies to above tested sample only. This report shall not be reproduced in part without written approval of Audix Technology (Shanghai) Co., Ltd.

This report must not be used by the applicant to claim product endorsement by NVLAP or any agency of the U.S. Government.

Date of Test : Jul 05 ~ 26, 2001

## 1.3 Measurement Uncertainty

|                                |   |            |
|--------------------------------|---|------------|
| Conducted Emission Uncertainty | : | U = 2.66dB |
| Radiated Emission Uncertainty  | : | U = 4.26dB |

## 2 AC POWERLINE CONDUCTED EMISSION TEST

### 2.1 Test Equipment

The following test equipment are used during the powerline conducted emission test in a shielded room:

| Item | Type                                        | Manufacturer    | Model No. | Serial No. | Last Cal.    | Cal. Interval |
|------|---------------------------------------------|-----------------|-----------|------------|--------------|---------------|
| 1.   | Test Receiver                               | Rohde & Schwarz | ESHS10    | 844077/020 | Apr 24, 2001 | 1 Year        |
| 2.   | Line Impedance Stabilization Network (LISN) | Kyoritsu        | KNW-407   | 8-1280-5   | May 08, 2001 | 1 Year        |

### 2.2 Block Diagram of Test Setup

### 2.3 Conducted Emission Limits

| Frequency<br>(MHz)                                                        | Maximum RF Line Voltage |              |
|---------------------------------------------------------------------------|-------------------------|--------------|
|                                                                           | ( $\mu$ V)              | dB( $\mu$ V) |
| 0.45 ~ 2.51                                                               | 250                     | 48           |
| 2.51 ~ 3                                                                  | 3000                    | 70           |
| 3 ~ 30                                                                    | 250                     | 48           |
| NOTE 1 – RF Line Voltage dB( $\mu$ V) = 20 log RF Line Voltage ( $\mu$ V) |                         |              |

## 2.4 Test Configuration

The EUT (listed in Sec. 1.1) was installed as shown on Sec. 2.2 to meet FCC requirement and operating in a manner which tends to maximize its emission level in a normal application.

## 2.5 Operating Condition of EUT

The EUT was connected to the power mains through a Line Impedance Stabilization Network (LISN). This provided a 50 ohm coupling impedance for the measuring equipment.

Both sides of AC line were checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables were changed or manipulated according to MP-5/1986 during conducted emission test.

The bandwidth of Test Receiver ESHS10 was set at 10 kHz.

The frequency range from 450 kHz to 30 MHz was checked. The test mode (ON) was done on conducted test and the test results of the highest emissions are listed in Sec. 2.7.

## 2.6 Test Procedures

- 2.6.1 Setup the EUT as shown in Sec. 2.2.
- 2.6.2 Turn on the power of all equipment.
- 2.6.3 The EUT will be operated normally.

## 2.7 Test Results

< PASS >

The frequency and amplitude of the highest AC powerline conducted emissions relative to the limit is reported. All emissions not reported below are too low against the prescribed limits.

EUT : Energy Saving Lamp Temperature : 23°C

Model No. : TP120-5UL/2 Humidity : 53%

### 3 RADIATED EMISSION TEST

#### 3.1 Test Equipment

The following test equipment are used during the radiated emission test in a semi-anechoic chamber:

| Item | Type          | Manufacturer    | Model No. | Serial No. | Last Cal.    | Cal. Interval |
|------|---------------|-----------------|-----------|------------|--------------|---------------|
| 1.   | Preamplifier  | HP              | 8447D     | 2944A06849 | May 02, 2001 | 1/2 Year      |
| 2.   | Bilog Antenna | Chase           | CBL6111   | 1146       | May 02, 2001 | 1/2 Year      |
| 3.   | Test Receiver | Rohde & Schwarz | ESVS10    | 844594/001 | Sep 20, 2000 | 1 Year        |

| NOTE 1 - Emission Level $\text{dB}(\mu\text{V/m}) = 20 \log \text{Emission Level } (\mu\text{V/m})$<br>NOTE 2 - The tighter limit applies at the band edges.<br>NOTE 3 - Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the device or system.<br>NOTE 4 - The measurements are made at 3 meters distance, then the permissible field strength limits be adjusted using $1/d$ as an attenuation factor. |                 |                                              |                                                                    |                            |

### 3.4 Test Configuration

The configuration of the EUT is same as those used in conducted emission test.

Please refer to Sec. 2.4.

### 3.5 Operating Condition of EUT

The EUT was placed on a turn table which is 0.8 meter above ground. The turn table rotated 360 degrees to determine the position of the maximum emission level. The EUT was set 3 meters away from the receiving antenna, which was mounted on an antenna tower. The antenna moved up and down between 1 meter and 4 meters to find out the maximum emission level. Broadband antenna (Calibrated Bilog Antenna) or dipole antenna were used as receiving antenna. Both horizontal and vertical polarization of the antenna were set on measurement. In order to find the maximum emission, all of the interference cables were manipulated according to MP-5/1986 requirements during radiated test.

The bandwidth setting on Test Receiver ESVS10 was 120 kHz.

The frequency range from 30 MHz to 1000 MHz was checked. The test mode (ON) was done on radiated emission test and the test results of the highest emissions are listed in Sec. 3.7.

### 3.6 Test Procedures

Same as conducted emission test which is listed in Sec. 2.6, except the test set up replaced by Sec. 3.2.

### 3.7 Test Results

#### <PASS>

The frequency and amplitude of the highest radiated emissions relative the limit is reported. All the emissions not reported below are too low against the FCC Part 18 limit.

EUT : Energy Saving Lamp Temperature : 23°C

Model No. : TP120-5UL/2 Humidity : 53%

Test Mode : ON Date of Test : Jul 12, 2001

NOTE 1 – Emission Level = Meter Reading + Antenna Factor + Cable Loss – Preamp Factor

NOTE 2 – All reading are Quasi-Peak values.

NOTE 3 – The worst emission at horizontal polarization was detected at 649.830 MHz with corrected signal level of 20.73dB(μV/m) (limit is 46.00 dB(μV/m)), when the antenna was 1.00m height and the turn table was at 201°.

NOTE 4 – The worst emission at vertical polarization was detected at 40.670 MHz with corrected signal level of 20.50 dB(μV/m) (limit is 40.00 dB(μV/m)), when the antenna was 1.00 m height and the turn table was at 286°.

NOTE 5 – 0° was the table front facing the antenna. Degree is calculated from 0° clockwise facing the antenna.

|              | 159.010         | 12.13                 | 1.74            | 25.10              | 24.39                | 13.16                   | 43.50           | 30.34        |
|              | 242.430         | 12.59                 | 2.24            | 25.10              | 28.29                | 18.02                   | 46.00           | 27.98        |

NOTE 1 – Emission Level = Meter Reading + Antenna Factor + Cable Loss – Preamp Factor

NOTE 2 – All reading are Quasi-Peak values.

NOTE 3 – The worst emission at horizontal polarization was detected at 649.830 MHz with corrected signal level of 20.73dB(μV/m) (limit is 46.00 dB(μV/m)), when the antenna was 1.00m height and the turn table was at 228°.

NOTE 4 – The worst emission at vertical polarization was detected at 42.610 MHz with corrected signal level of 18.01 dB(μV/m) (limit is 40.00 dB(μV/m)), when the antenna was 1.00 m height and the turn table was at 347°.

NOTE 5 – 0° was the table front facing the antenna. Degree is calculated from 0° clockwise facing the antenna.

|              | 242.430         | 12.59                 | 2.24            | 25.10              | 28.33                | 18.06                   | 46.00           | 27.94        |

NOTE 1 – Emission Level = Meter Reading + Antenna Factor + Cable Loss – Preamp Factor

NOTE 2 – All reading are Quasi-Peak values.

NOTE 3 – The worst emission at horizontal polarization was detected at 127.000 MHz with corrected signal level of 16.10dB(μV/m) (limit is 43.50 dB(μV/m)), when the antenna was 1.00m height and the turn table was at 228°.

NOTE 4 – The worst emission at vertical polarization was detected at 48.430 MHz with corrected signal level of 17.34 dB(μV/m) (limit is 40.00 dB(μV/m)), when the antenna was 1.00 m height and the turn table was at 10°.

NOTE 5 – 0° was the table front facing the antenna. Degree is calculated from 0° clockwise facing the antenna.

TEST ENGINEER: Ada Zou  
(ADA ZOU)

## 4 RADIATED ELECTROMAGNETIC EMISSION TEST

### 4.1 Test Equipment

The following test equipment are used during the powerline conducted emission test in a shielded room:

| Item | Type          | Manufacturer    | Model No. | Serial No. | Last Cal.    | Cal. Interval |
|------|---------------|-----------------|-----------|------------|--------------|---------------|
| 1.   | Loop Antenna  | Laplace         | RF300     | 5001       | May 5, 2001  | 1/2 Year      |
| 2.   | Test Receiver | Rohde & Schwarz | ESHS10    | 844077/020 | Apr 24, 2001 | 1 Year        |

### 4.2 Block Diagram of Test Setup

### 4.3 Test Configuration

The configuration of the EUT is same as those used in conducted Emission test.

Refer to Sec. 2.4.

### 4.4 Operating Condition of EUT

Same as conducted Emission test which is listed in Sec. 2.5, except the test set up replaced by Sec. 4.1.

## 4.5 Test Procedure

The EUT was placed on a wooden table, which is in the center of the loop antenna. The loop antenna is 0.5 meters above the ground. The sides of the EUT were 0.2 meters away from the loop antenna. Each side had one sensor. The three sensors were through the control unit to connect the Test receiver, which receiving the emission and find out the maximum emission of each side of the loop antenna.

The bandwidth of R&S Test Receiver ESHS10 was set at 200 Hz from 9kHz to 150kHz and 10kHz from 150 kHz to 30 MHz.

The frequency range from 9 kHz to 30 MHz was checked.

The “ON” mode was done on radiated electromagnetic emission test and all the test results are listed in Sec. 4.6.

## 4.6 Test Result
