Re: FCC ID PEYCLIPON

31 July 20001

Dear Nick,

please find enclosed the statements in response to the FCC email regarding this application.

1. The product employs pseudo random frequency hopping spread spectrum only, it is not a hybrid system therefore section 15.247(F) is not thought to apply. All testing was conducted with the output power set to maximum as this is the configuration the product will be sold in.
2. The product is fitted with an integral antenna soldered to the PCB only, there are no external antenna ports.
3. This device can only be used with the Palm Vx PDA, it is not designed to interface to any other radio transmitter. The Palm Vx does not contain a radio transmitter.

I hope this answers the queries raised, please do not hesitate to contact me if any further information is required.

Yours sincerley.

Mark Bailey
