Equipment: FCC ID: PHO-CDR915L
FCC Rules: Part 2 and 15.249 (Modular Transmitter)
Re: modular transmitter approval

Gentlemen:

As requested in the Public Notice DA00-1407 regarding Part 15 unlicensed modular transmitter approval, the following information has been addressed. The transmitter module is a complete RF transmitter containing its own reference oscillator, antenna etc. The connections available on the module are for power and data inputs only. Below please find information, addressing each paragraph from DA00-1407, requested about the unit.

- 1.) The unit has its own RF shield to prevent coupling between the RF circuitry of the module and any wires or circuits in the device into which the module is installed. Photographs of the unit are included in an exhibit with the application.
- 2.) The unit incorporates a buffer stage on the inputs to limit over-modulation.
- 3.) The unit has power regulation incorporated in the circuitry to ensure continued compliance regardless of the design of the power supplying circuitry.
- 4.) The unit utilizes a permanently mounted antenna, which is attached to the circuit board in production. This fulfills the requirements of 15.203.
- 5.) The module was tested in a stand-alone configuration. The module complies with part 15 emissions limits regardless of the device into which it is eventually installed.
- 6.) The module has the FCC ID number permanently affixed to the printed circuit board and information supplied to the end user regarding label placement on the outside of the device into which the module is contained. This information is clearly defined in the user manual.
- 7.) The unit complies with part 15.249 as stated in the user manual. Adequate instructions are supplied with the unit to explain the requirements.
- 8.) The unit complies with the RF exposure requirements as stated in 2.1091, 2.1093, and part 15.

Should you require any further information, please contact the undersigned.

Thank you for your consideration in this matter.

Sincerely,

Scot Rogers
