Specific Absorption Rate (SAR) Certification information

Precautions:

Use a wireless hands-free system (headphone, headset) with a low power Bluetooth emitter

Make sure the cell phone a low SAR

Keep your calls short or send a text message (SMS) instead. This advice applies especially to children, adolescents and pregnant women.

Use cell-phone when signal quality is good.

People having active medical implants should preferably keep the cell phone at least 15cm from the implant

FCC Caution

- **15.19 Labelling requirements.**

This device complies with part 15 of the FCC Rules.

Operation is subject to the condition that this device does not cause harmful interference

- **15.21 Information to user.**

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

- **15.105 Information to the user.**

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does

cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Specific Absorption Rate (SAR) information:

This Smartphone meets the government's requirements for exposure to radio waves. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons regardless of age or health.

FCC RF Exposure Information and Statement The SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue. Device types: Smartphone (FCC ID: PJ7-M54T) has also been tested

against this SAR limit. The highest SAR value reported under this standard during product certification for use at the ear is 0.836 W/Kg and when properly worn on the body is 1.120 W/Kg. This device was tested for typical body-worn operations with the back of the handset kept 5mm for body worn and 10mm for hotspot. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 5mm for body worn and 10mm for hotspot. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

Body-worn Operation

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of 5mm for body worn and 10mm for hotspot must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
