2 Test Configuration of Equipment under Test

2.1 Test Manner

- a. The spurious emission measurements were carried out in semi-anechoic chamber with 3-meter test range.
- b. During all testings, EUT is in link mode with base station emulator at maximum power level. (PCL=5 for GSM850 and PCL=0 for PCS 1900)
- c. Frequency range investigated: radiated emission 30 MHz to 9000MHz for GSM850 and 30MHz to 19000MHz for PCS1900.

2.2 Test Mode

Application	GSM 850	PCS 1900
Radiated Emission	☒ Mode 1: CH 128	☒ Mode 2: CH 661
Conducted Measurement	☒ Mode 1: CH 128	☒ Mode 2: CH 661

Remark :

1. There four EUTs are serial models of 2208. They have the same RF portions, main board and antenna. The differences between them are ID and cover. Therefore, the retested items are conducted power, ERP/EIRP, and the spurious emission to verify them compliance.
2. Only the raw data of the worst spurious emission (model 2205) are attached in the report.

4. The height of the receiving antenna is varied between one meter and four meters to reach the maximum radiated power for both horizontal and vertical polarizations.
5. Taking the record of maximum ERP/EIRP.
6. A Horn antenna was substituted in place of the EUT and was driven by a signal generator.
7. The conducted power at the terminal of the Horn antenna is measured.
8. Repeat step 3 to step 5.
