

EMISSION TEST REPORT

Test Report No. :

21LE0100-YW-1

Applicant: Hitachi Software Engineering Co.,Ltd.

Type of Equipment: Electronic Pen

Model No.: K-W019-004

FCC ID: PJV-RX01

Test standard: FCC Part 15 Subpart C §15.227

Test Result: Complies

This report may not be reproduced in full, partial reproduction may only be made with the written consent of the laboratory.

The results in this report apply only to the sample tested.

Date of test: July 31, 2001

Tested by: 

Masafumi Inui

1 GENERAL INFORMATION

APPLICANT : Hitachi Software Engineering Co.,Ltd.

TRADE NAME : Hitachi Software Engineering Co.,Ltd.

ADDRESS : 6-81 Onoe-cho, Naka-ku, Yokohama-shi,
Kanagawa 231-0015 Japan
Tel: +81-45-681-2146
Fax: +81-45-681-3062

REGULATION(S) : FCC Part 15 Subpart C §15.227

MODEL NUMBER : K-W019-004

FCC ID : PJV-RX01

SERIAL NUMBER : E0011 (1CH 27.195MHz)
E0012 (2CH 26.995MHz)
E0015 (3CH 27.045MHz)

KIND OF EQUIPMENT : Electronic Pen

TESTED DATE : July 31 , 2001

RECEIPT DATE OF SAMPLE : July 25, 2001

REPORT FILE NUMBER : 21LE0100-YW-1

TEST SITE : A-PEX Yokowa No.2 Open Test Site

Test report**Our reference** : 21LE0100-YW-1**Page** : 4 of 12**Issued date** : September 3, 2001**FCC ID** : PJV-RX01

1.1 Product Description

Model: K-W019-004 (referred to as the EUT in this report) is a Electronic Pen.

The specification is as following:

Carrier Frequency : 1CH 27.195MHz.

2CH 26.995MHz

3CH 27.045MHz

4CH 27.145MHz

Operation Voltage : DC2.4V (Ni-MH)

Modulation : Frequency Modulation

Information on antenna : Build in antenna

1.2 Test Specification

Test Specification : FCC Part 15 Subpart C

Title : FCC 47CFR Part15 Radio Frequency Device

Subpart C Intentional Radiators

§15.227 Operation within the Band 26.96 – 27.28MHz

1.3 Methods & Procedures

No.	Item	Test Procedure	Specification	Remarks
1	Electric Field Strength of Fundamental Emission	FCC/ANSI C63.4:1992	§15.227(a)	-
2	Electric Field Strength of Spurious Emission	FCC/ANSI C63.4:1992	§15.227(b)	-

1.4 Test Location

A-PEX International Co.,Ltd. Yokowa No.2 test site

108 Yokowa-cho, Ise-shi, Mie-ken 516-1106 Japan

Telephone number : +81-596-39-1485

Facsimile number : +81-596-39-0232

This site has been fully described in a report submitted to FCC office, and listed on October 26, 2000(Registration number: 90411/No.2).

2 SYSTEM TEST CONFIGURATION

2.1 Operation Modes

The EUT exercise program used during radiated testing was designed to exercise the various system components in a manner similar to typical use.

The sequence is used:

Operation Mode : Transmitting

2.2 Justification : The EUT was configured in typical fashion (as a customer would normally use it) for testing.

3.1 Measurement Uncertainty

Radiated Emission Test

■ Measurement distance of 3m:

The measurement uncertainty (with a 95% confidence level) for this test using Biconical antenna is $\pm 4.4\text{dB}$.

The measurement uncertainty (with a 95% confidence level) for this test using Logperiodic antenna is $\pm 4.8\text{dB}$.

■ Measurement distance of 10m:

The measurement uncertainty (with a 95% confidence level) for this test using Loop antenna is $\pm 2.5\text{dB}$.

■ The data listed in this test report may exceed the test limit because it does not have enough margin.

☐ The data listed in this test report has enough margin, more than site margin.

4 Summary of test results

4.1 Test results

No.	Item	Test Procedure	Specification	Remarks	Result
1	Electric Field Strength of Fundamental and Spurious Emission(below 30MHz)	FCC/ANSI C63.4:1992	FCC Part15 Subpart C §15.227(a) and (b)	10m	Complies
2	Electric Field Strength of Spurious Emission (above 30MHz)	FCC/ANSI C63.4:1992	FCC Part15 Subpart C §15.227(b)	3m	Complies

A-PEX INTERNATIONAL hereby confirms that E.U.T. , in the configuration tested, complies with the specifications FCC Part15 Subpart C §15.227.

4.2 Electric Field Strength Measurement of Fundamental Frequency

The following table lists frequency at which emissions were measured using a average detector and at a test distance of 10m

Frequency (MHz)	Ant. Pol.	Receiver Reading (dB μ V)	Correction Factor (dB)	Field Strength (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)
27.1974 (1CH)	V	69.9	-7.4	62.5	100.9	38.4

Note: The limit was calculated using the square of an inverse linear distance extrapolation factor (40dB/decade) .i.e $40\log_{10}(d1/d2)$.

3m Fundamental Emission Limit (10,000 μ V/m) = $20\log_{10}(10,000) = 80\text{dB } \mu$ V/m

10m Fundamental Emission Limit = $80\text{dB } \mu$ V/m + $40\log_{10}(10/3) = 100.9\text{dB } \mu$ V/m

Field strength calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor, and subtracting the Amplifier Gain from the measured reading. The sample calculation is as follows :

$$FS = RA + AF + CF - AG$$

where FS = Field Strength

RA = Receiver Amplitude

AF = Antenna Factor

CF = Cable Factor

AG = Amplifier Gain

Assume a receiver reading of 69.9 dB μ V is obtained. The antenna Factor of 21.2 dB and Cable Factor of 1.2 dB is added. The Amplifier Gain of 29.8 dB is subtracted, giving a field strength of 62.5 dB μ V/m.

$$FS = 69.9 + 21.2 + 1.2 - 29.8 = 62.5 \text{ dB } \mu \text{ V/m}$$

Testing Laboratory

A-pex International Co., Ltd.

Telephone: +81 596 39 1485

108 Yokowa-cho, Ise-shi Mie-ken 516-1106 JAPAN Facsimile: +81 596 39 0232

Test report**Our reference** : 21LE0100-YW-1**Page** : 9 of 12**Issued date** : September 3, 2001**FCC ID** : PJV-RX01

4.3 Electric Field Strength of Spurious Emission

The initial step in collecting radiated data was a spectrum analyzer peak scan of the measurement range (9kHz-1000MHz).

The final data was reported in the worst-case emissions.

The following table lists frequency at which emissions were measured using a Quasi-Peak detector and at a test distance of 3m(above 30MHz) and 10m(below 30MHz).

The minimum margin to the limit is as follows :

Frequency (MHz)	Ant. Pol.	Receiver Reading (dB μ V)	Correction Factor (dB)	Field Strength (dB μ V/m)	Limit (dB μ V/m)	Margin (dB)
244.78 (1CH)	H	47.1	-3.4	43.7	46.0	2.3

Field strength calculation

The field strength is calculated by adding the Antenna Factor, Cable Factor and Antenna Pad, and subtracting the Amplifier Gain from the measured reading. The sample calculation is as follows :

$$FS = RA + AF + CF + AT - AG$$

where FS = Field Strength

RA = Receiver Amplitude

AF = Antenna Factor

CF = Cable Factor

AT = Antenna Pad

AG = Amplifier Gain

Assume a receiver reading of 47.1 dB μ V is obtained. The antenna Factor of 16.9 dB, Cable Factor of 3.6 dB and Antenna Pad of 5.8 dB is added. The Amplifier Gain of 29.7 dB is subtracted, giving a field strength of 43.7 dB μ V/m.

$$FS = 47.1 + 16.9 + 3.6 + 5.8 - 29.7 = 43.7 \text{ dB } \mu \text{ V/m}$$

5 Radiated emission

5.1 Operating environment

The test was carried out in an open site.

Temperature : See data

Humidity : See data

5.2 Test configuration

EUT was placed on a table of nominal size, 1.0m by 1.5m, raised 80cm above the conducting ground plane.

Test was made with the antenna positioned in both the horizontal and vertical planes of polarization.

The measurement antenna was varied in height above the conducting ground plane to obtain the maximum signal strength. (above 30MHz)

Figure 1 Drawing of the test set-up

5.3 Test conditions

Frequency range : 9kHz-30MHz (Loop antenna) / 30MHz-300MHz (biconical antenna)
/ 300MHz-1000MHz (Log-periodic antenna)

Test distance : 10m(9kHz-30MHz) and 3m(30MHz-1000MHz)

EUT position : Table top

5.4 Test procedure

The Radiated Electric Field Strength intensity has been measured on an open test site with a ground plane at a distance of 10m and 3m from the EUT to the antenna.

Pre check measurements were performed in a shielded room or used search coil for ambient noise at high-level, especially from 80MHz to 90MHz and 270MHz to 290MHz, and 500MHz to 700MHz.

The measuring antenna height was varied between 1m to 4m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity. (above 30MHz)

The measurements were performed for both vertical and horizontal antenna polarization.

The EUT was put into operation at Transmitting mode.

The radiated emission measurements were made with the following detector function of the receiver.

Detector Type : QP and AV(Fundamental only)

IF Bandwidth : 120kHz(above 30MHz) / 10kHz(below 30MHz)

5.5 Results

Summary of the test results: Pass
