

TEST REPORT FROM RADIO FREQUENCY INVESTIGATION LTD.

Test Of: IPWireless U.K. Ltd.
UE P1D Model: KF

To: FCC Part 15: 2001,
Part 21: 2001 & Part 74: 2001

Test Report Serial No:
RFI/MPTB3/RP45298JD05

Supersedes Test Report Serial No:
RFI/MPTB2/RP45298JD05

This Test Report Is Issued Under The Authority Of Richard Jacklin, Operations Director: 	Checked By: 
Tested By:  pp	Release Version No: PDF01
Issue Date: 17 December 2003	Test Dates: 08 September 2003 to 12 September 2003

This report is issued in Adobe Acrobat portable document format (PDF). It is only a valid copy of the report if it is being viewed in PDF format with the following security options not allowed: Changing the document, Selecting text and graphics, Adding or changing notes and form fields. Furthermore, the date of creation must match the issue date stated above.
This report may be copied in full. The results in this report apply only to the sample(s) tested.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

1. Client Information

Company Name:	IPWireless UK Ltd.
Address:	Units 3-6 Charlton Business Park Crudwell Road Malmesbury SN16 9RU
Contact Name:	Mr P Warburg

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

2. Equipment Under Test (EUT)

The following information has been supplied by the client:

2.1. Identification Of Equipment Under Test (EUT)

Brand Name:	Wireless Broadband Modem
Model Name or Number:	KF
Unique Type Identification:	None stated
Serial Number:	None stated
Country of Manufacture:	UK
FCC ID Number:	PKTP1DKF
Date of Receipt:	08 September 2003

Brand Name:	Phihong PSU
Model Name or Number:	PSC05R-050 (IP)
Unique Type Identification:	None stated
Serial Number:	None stated
Country of Manufacture:	Taiwan
Date of Receipt:	08 September 2003

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

2.2. Description Of EUT

The equipment under test is a wireless broadband modem; the modem provides high-speed internet access when used with a host computer.

2.3. Modifications Incorporated In EUT

The EUT has not been modified from what is described by the Model Number and Unique Type Identification stated above.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

2.4. Additional Information Related To Testing

Power Supply Requirement:	Nominal 110V, 60 Hz, AC Mains Supply		
Intended Operating Environment:	Residential, Commercial, Light Industry		
Equipment Category:	Multipoint Distribution Service / Instructional Television Fixed Service Response Station		
Type of Unit:	Wireless Broadband Modem		
Weight:	105 g without battery		
Dimensions:	125 x 85 x 20 mm		
Interface Ports:	USB Port Mains 110 VAC Input Antenna Port		
Transmit Frequency Range	2.506 GHz to 2.680 GHz		
Band Edges	2.500 GHz and 2.690 GHz		
Transmit Channels Tested	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	N/A	2506
	Middle	N/A	2596
	Top	N/A	2680
Receive Frequency Range	2.506 GHz to 2.680 GHz		
Receive Channels Tested	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	N/A	2506
	Middle	N/A	2596
	Top	N/A	2680
Highest Fundamental Frequency	2680 MHz		
Highest Oscillator Frequency	2300 MHz		
Maximum Power Output (EIRP)	26.0 dBm (24 dBm conducted, 2.0 dBi antenna gain)		

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

2.5. Support Equipment

The following support equipment was supplied by the applicant and used to exercise the EUT during testing:

Description:	Laptop PC	
Brand Name:	Sony Vaio	
Model Name or Number:	PCG-Z505HSK	
Serial Number:	28305733 3350053	
Cable Length and Type	2 m	
Connected to Port:	USB	

Description:	External Power supply for Laptop	
Brand Name:	Sony	
Model Name or Number:	PCGA-ACX1	
Serial Number:	0004-A-0632772P	
Cable Length and Type	2 m Mains Cable	1.8 m 2 core
Connected to Port:	AC I/P	DC O/P

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

3. Test Specification, Methods And Procedures

3.1. Test Specification

Reference:	FCC Part 74: 2001: Sections 74.935, 74.936 and 74.961
Title:	Code of Federal Regulations, Part 74 (47CFR) Subpart I Instructional Television Fixed Service
Comments:	None.
Purpose of Test:	To determine whether the equipment complied with the requirements of the specification for the purposes of certification.

Reference:	FCC Part 21: 2001 Sections 21.101, 21.904 and 21.908,
Title:	Code of Federal Regulations, Part 21 (47CFR) Subpart K Multipoint Distribution Service
Comments:	None.
Purpose of Test:	To determine whether the equipment complied with the requirements of the specification for the purposes of certification.

Reference:	FCC Part 15: 2001 Class B, Sections: 15.107 and 15.109
Title:	Code of Federal Regulations, Part 15 (47CFR) Radio Frequency Devices: Digital Devices.
Comments:	A description of the test facility used for this test is on file with, and has been accepted by, the Federal Communications Commission as required by Section 2.948 of Federal Rules.
Purpose of Test:	To determine whether the equipment complied with the requirements of the specification for the purposes of certification.

Reference:	FCC Part 2: 2001 Sections 2.1046, 2.1049, 2.1051, 2.1053 and 2.1055
Title:	Code of Federal Regulations, Part 2 (47CFR) Frequency allocations and radio treaty matters; General Rules and Regulations
Comments:	None.
Purpose of Test:	To determine whether the equipment complied with the requirements of the specification for the purposes of certification.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

3.2. Methods And Procedures

The methods and procedures used were as detailed in:

ANSI/TIA-603-B-2002

Land Mobile Communications Equipment, Measurements and performance Standards.

ANSI C63.2 (1996)

Title: American National Standard for Instrumentation - Electromagnetic noise and field strength.

ANSI C63.4 (2001)

Title: American National Standard Methods of Measurement of Electromagnetic Emissions from Low Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz.

ANSI C63.5 (1998)

Title: American National Standard for the Calibration of antennas used for Radiated Emission measurements in Electromagnetic Interference (EMI) control.

ANSI C63.7 (1988)

Title: American National Standard Guide for Construction of Open Area Test Sites for performing Radiated Emission Measurements.

CISPR 16-1 (1999)

Title: Specification for radio disturbance and immunity measuring apparatus and methods. Part 1. Radio disturbance and immunity measuring apparatus.

3.3. Definition Of Measurement Equipment

The measurement equipment used complied with the requirements of the standards referenced in the Methods & Procedures section above. Appendix 1 contains a list of the test equipment used.

RADIO FREQUENCY INVESTIGATION LTD.

TEST REPORT

Operations Department

S.No: RFI/MPTB3/RP45298JD05

Page 11 of 70

Issue Date: 17 December 2003

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

4. Deviations From The Test Specification

None

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

5. Operation Of The EUT During Testing

5.1. Operating Modes

The EUT was tested in the following operating modes:

Transmitter Modes:

For all conducted antenna port tests, except the Spurious emission band edge, the EUT was transmitting at full power on bottom, middle and top channels on all 15 timeslots. For the Spurious emissions band edge the transmitter was at full power for 5 of the 15 time slots, typical of a very heavy use. In normal use the transmitter would not exceed 5 of the 15 time slots used, as being a TDD system, it must receive information in order to maintain the link.

For radiated tests, the EUT was transmitting at full power on bottom, middle and top channels on 15 timeslots.

Receiver Modes:

Testing was performed with the EUT receiving on all timeslots.

5.2. Configuration and Peripherals

The EUT was tested in the following configuration:

All tests were performed with an external AC adaptor connected to 110 VAC, 60 Hz, AC Mains supply, and the USB port connected to a laptop PC

Appendix 3 contains a schematic diagram of the test configuration.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

6. Summary Of Test Results

Range Of Measurements	Specification Reference	Mode of Operation	Port Type	Compliance Status
AC Conducted Spurious Emissions (150 kHz to 30 MHz)	Part 15 of CFR 47: 2001, Section 15.107	Standby	AC Mains Input	Complied
Radiated Spurious Emissions (30 MHz to 1 GHz)	Part 15 of CFR 47: 2001, Section 15.109	Standby	Enclosure	Complied
Radiated Spurious Emissions (1 GHz to 20 GHz)	Part 15 of CFR 47: 2001, Section 15.109	Standby	Enclosure	Complied
Effective Isotropic Radiated Power (EIRP)	Part 2.1046, Part 21.904 Part 74.935 of CFR 47: 2001	Transmit	Antenna	Complied
Frequency Stability (Temperature Variation)	Part 2.1055, Part 21.101 Part 74.961 of CFR 47: 2001	Transmit	Antenna Terminals	Complied
Frequency Stability (Voltage Variation)	Part 2.1055, Part 21.101 Part 74.961 of CFR 47: 2001	Transmit	Antenna Terminals	Complied
Occupied Bandwidth	Part 2.1049, Part 21.908 Part 74.936 of CFR 47: 2001	Transmit	Antenna Terminals	Complied
Transmitter Spectrum Mask	Part 2.1051, 21.908 and 74.936	Transmit	Antenna	Complied
Conducted Emissions at Band Edges	Part 2.1051, Part 21.908 Part 74.936 of CFR 47: 2001	Transmit	Antenna Terminals	Complied
Conducted Emissions	Part 2.1051, Part 21.908 Part 74.936 of CFR 47: 2001	Transmit	Antenna Terminals	Complied
Radiated Spurious Emissions	Part 2.1053, Part 21.908 Part 74.936 of CFR 47: 2001	Transmit	Antenna	Complied
Radiated Emissions at Band Edges	Part 2.1053, Part 21.908 Part 74.936 of CFR 47: 2001	Transmit	Antenna	Complied

6.1. Location Of Tests

All the measurements described in this report were performed at the premises of Radio Frequency Investigation Ltd, Ewhurst Park, Ramsdell, Basingstoke, Hampshire, RG26 5RQ, England.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

7. Measurements, Examinations And Derived Results

7.1. General Comments

7.1.1. This section contains test results only. Details of the test methods and procedures can be found in Appendix 2 of this report.

7.1.2. Measurement uncertainties are evaluated in accordance with current best practice. Our reported expanded uncertainties are based on standard uncertainties, which are multiplied by an appropriate coverage factor to provide a statistical confidence level of approximately 95%. Please refer to Section 8 for details of measurement uncertainties.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

7.2. Standby AC Conducted Spurious Emissions: Part 15.107

7.2.1. The EUT was configured as for AC conducted emissions measurements as described in section 9 of this report.

7.2.2. Tests were performed to identify the maximum emissions levels on the AC mains line of the EUT.

Results: Quasi-Peak Detector Measurements On Live And Neutral Lines

Frequency (MHz)	Line	Q-P Level (dB μ V)	Q-P Limit (dB μ V)	Margin (dB)	Result
0.164	Live	45.22	65.24	20.02	Complied
0.170	Neutral	43.43	64.94	21.51	Complied
0.521	Neutral	39.06	56.00	16.94	Complied
0.529	Live	38.15	56.00	17.85	Complied
2.485	Neutral	33.14	56.00	22.86	Complied

Results: Average Detector Measurements On Live And Neutral Lines

Frequency (MHz)	Line	Av. Level (dB μ V)	Av. Limit (dB μ V)	Margin (dB)	Result
0.164	Live	28.07	55.24	27.17	Complied
0.170	Neutral	27.68	54.94	27.26	Complied
0.521	Neutral	31.54	46.00	14.46	Complied
0.529	Live	30.63	46.00	15.37	Complied
2.485	Neutral	24.54	46.00	21.46	Complied

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

Receiver Radiated Emission – 1 GHz to 12.5 GHz: Part 15.109 (Continued)

Note: these plots are pre-scans and for indication purposes only. For final measurements, see accompanying tables.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

7.5. Transmitter Carrier Output Power and Effective Isotropic Radiated Power (EIRP); Part; 2.1046, 21.904 and 74.935

7.5.1. The EUT was configured as for conducted RF output power and Effective Isotropic Radiated Power (EIRP) as described in section 9 of this report.

7.5.2. The effective isotropic radiated power (EIRP) was calculated by adding the manufacturer's declared antenna gain to the figure measured for conducted RF output power.

Results EIRP.

Channel	Measured Frequency (MHz)	Conducted RF O/P Power (dBm)	Antenna Gain (dBi)	EIRP (dBm)	EIRP (dBW)	Limit EIRP (dBW)	Margin (dB)	Result
Bottom	2506.00	23.9	2.0	25.9	-3.1	15.2	18.3	Complied
Middle	2596.00	23.9	2.0	25.9	-3.1	15.2	18.3	Complied
Top	2680.00	23.7	2.0	25.7	-3.3	15.2	18.5	Complied

Note 1: It should be noted that EIRP has been calculated by adding the manufacturer's declared antenna gain to the measured conducted power. Thus the stated measurement uncertainty in section 8 of this report is for conducted measurement only.

Note 2: FCC Parts 21.904 and 74.935 state that the EIRP limit is 33.3 W (15.2 dBW) referenced to a 100 kHz bandwidth. The measurements were performed using a wideband power meter as stated in Appendix 2 of this report. Since the total EIRP is less than the power limit in a 100 kHz bandwidth further spectral analysis was not necessary.

Note 3: These results determine that the EUT output power falls in the "<-6dBW per 6MHz channel" category of FCC Parts 21.908(d) and 74.936(f) with regard to out-of-band power.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

7.6. Transmitter Frequency Stability: (Temperature Variation)
Parts 2.1055, 21.101 and 74.961

7.6.1. The EUT was configured as for frequency stability measurements as described in Section 9 of this report.

7.6.2. Tests were performed to identify the maximum frequency error of the EUT with variations in ambient temperature.

Results Bottom Channel (2506.00 MHz)

Temp (°C)	Measured Frequency (MHz)	Frequency Error (Hz)	Frequency Error (ppm)	Limit (ppm)	Margin (ppm)	Result

7.7. Transmitter Frequency Stability: (Voltage Variation)
Parts 2.1055, 21.101 and 74.961

7.7.1. The EUT was configured as for frequency stability measurements as described in section 9 of this report.

7.7.2. Tests were performed to identify the maximum frequency error of the EUT with variations in nominal operating voltage.

Results Bottom Channel

Supply Voltage (VAC 60 Hz)	Measured Frequency (MHz)	Frequency Error (Hz)	Frequency Error (ppm)	Limit (ppm)	Margin (ppm)	Result
93.5	2506.001175	1175	0.469	10.0	9.531	Complied

7.8. Transmitter Occupied Bandwidth
Parts 2.1049, 21.908 and 74.936

7.8.1. The EUT was configured as for Occupied Bandwidth measurements as described in section 9 of this report.

7.8.2. Tests were performed to identify the maximum bandwidth occupied by the fundamental frequency of the EUT.

Results:

Channel	Frequency (MHz)	Resolution Bandwidth (kHz)	Video Bandwidth (kHz)	Occupied Bandwidth (MHz)
Bottom	2506.00	300	1000	8.280
Middle	2596.00	300	1000	8.280
Top	2680.00	300	1000	8.360

7.9. Transmitter Spectrum Mask Part 2.1051, 21.908 and 74.936

7.9.1. The EUT was configured as for Spectrum Mask measurements as described in section 9 of this report.

7.9.2. Tests were performed to determine compliance with the out-of band power requirements at frequencies adjacent to the channel occupied by the fundamental frequency of the EUT.

Results:

Graphs GPH\45298JD05 051 bottom channel, GPH\45298JD05 052 middle channel and GPH\45298JD05 053 top channel, indicating compliance with the out-of band power requirements within the frequency bands defined by the nominal channel frequency +/- 9 MHz.

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

7.10. Transmitter Conducted Emissions at Band Edges **Part 2.1051, 21.908 and 74.936**

7.10.1. The EUT was configured as for conducted emissions measurements as described in section 9 of this report.

7.10.2. Tests were performed to identify the maximum emissions level at the edges of the 2500 – 2690 MHz frequency band that the EUT will operate over.

Results:

Bottom Band Edge

Frequency (MHz)	Peak Emission Level (dBm)	Carrier Level (dBm)	Spurious Emission (dBc)	Limit (dBc)	Margin (dB)	Result
2498.5	-39.9	23.9	-63.8	-51.7	12.1	Complied

Top Band Edge

Frequency (MHz)	Peak Emission Level (dBm)	Carrier Level (dBm)	Spurious Emission (dBc)	Limit (dBc)	Margin (dB)	Result
2690.25	-50.8	23.7	-74.5	-51.5	23.0	Complied

Note: The carrier level in the table above is measured on a 12 MHz channel and therefore is reduced by 3 dB for the 6 MHz channel power as referred to in FCC Section 21.908(d). The limit is calculated according to FCC Section 21.908(e) for absolute power measurements $(A + 10\log(C_{BW}/R_{BW}))$ where $C_{BW} = 6$ MHz and $R_{BW} = 100$ kHz).

7.11. Transmitter Conducted Emissions; Part 2.1051, 21.908 and 74.936

7.11.1. The EUT was configured as for conducted emissions measurements as described in section 9 of this report.

7.11.2. Tests were performed to identify the maximum transmitter conducted emission levels.

Result: Bottom Channel

Frequency (MHz)	Peak Emission Level (dBm)	Carrier Level (dBm)	Spurious Emission (dBc)	Limit (dBc)	Margin (dB)	Result
5000.0	-31.8	23.9	-55.7	-44.7	11.0	Complied

Result: Middle Channel

Frequency (MHz)	Peak Emission Level (dBm)	Carrier Level (dBm)	Spurious Emission (dBc)	Limit (dBc)	Margin (dB)	Result
5182.0	-28.0	23.9	-51.9	-44.7	7.2	Complied

Result: Top Channel

Frequency (MHz)	Peak Emission Level (dBm)	Carrier Level (dBm)	Spurious Emission (dBc)	Limit (dBc)	Margin (dB)	Result
5344.0	-25.3	23.7	-49.0	-44.5	4.5	Complied

Note: The carrier level in the table above is measured on a 12 MHz channel and therefore is reduced by 3 dB for the 6 MHz channel power as referred to in FCC Section 21.908(d). The limit is calculated according to FCC Section 21.908(e) for absolute power measurements ($A + 10\log(C_{BW}/R_{BW})$) where $C_{BW} = 6$ MHz and $R_{BW} = 1$ MHz).

7.12. Transmitter Radiated Emissions Part 2.1053, 21.908 and 74.936

7.12.1. The EUT was configured as for transmitter-radiated emissions testing as described in section 9 of this report.

7.12.2. Tests were performed to identify the maximum transmitter radiated emission levels.

Results:- Bottom Channel

Frequency (MHz)	Spurious Emission (dBm)	Carrier EIRP (dBm)	Spurious Emission (dBc)	Limit (dBc)	Margin (dB)	Result
1092.0	-37.1	25.9	-63.0	-46.7	16.3	Complied
2532.8	-24.1	25.9	-49.9	-46.7	3.2	Complied
5015.6	-39.2	25.9	-65.1	-41.9	23.2	Complied
7528.9	-44.2	25.9	-70.1	-41.9	28.2	Complied

Results:- Middle Channel

Frequency (MHz)	Spurious Emission (dBm)	Carrier EIRP (dBm)	Spurious Emission (dBc)	Limit (dBc)	Margin (dB)	Result
1096.0	-38.0	25.9	-62.9	-46.7	16.2	Complied
2643.7	-25.1	25.9	-51.0	-46.7	4.3	Complied
5195.6	-33.6	25.9	-59.5	-41.9	17.6	Complied

Results:- Top Channel

Frequency (MHz)	Spurious Emission (dBm)	Carrier EIRP (dBm)	Spurious Emission (dBc)	Limit (dBc)	Margin (dB)	Result
1091.0	-35.7	25.7	-61.4	-46.5	14.9	Complied
2544.4	-25.8	25.7	-51.5	-46.5	5.0	Complied
5362.2	-31.2	25.7	-56.9	-41.7	15.2	Complied

Note: The carrier level in the table above is measured on a 12 MHz channel and therefore is reduced by 3 dB for the 6 MHz channel power as referred to in FCC Section 21.908(d). The limit is calculated according to FCC Section 21.908(e) for absolute power measurements ($A + 10\log(C_{BW}/R_{BW})$ where $C_{BW} = 6$ MHz and $R_{BW} =$ as stated on the plot).

8. Measurement Uncertainty

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently, the result of a measurement is only an approximation to the value of the measurand (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor, such that a confidence level of approximately 95% is maintained. For the purposes of this document “approximately” is interpreted as meaning “effectively” or “for most practical purposes”.

Measurement Type	Range	Confidence Level	Calculated Uncertainty
Carrier Output Power	Not applicable	95%	+/- 0.46 dB
AC Conducted Spurious Emissions	0.15 MHz to 30.0 MHz	95%	+/- 3.25 dB
Effective Isotropic Radiated Power (EIRP)	Not applicable	95%	+/- 1.78 dB
Frequency Stability	Not applicable	95%	+/- 0.01 ppm
Occupied Bandwidth	1850 to 1910 MHz	95%	+/- 0.12 %
Radiated Spurious Emissions	30.0 MHz to 1000.0 MHz	95%	+/- 5.26 dB
Radiated Spurious Emissions	1.0 GHz to 26.0 GHz	95%	+/- 1.78 dB
Spectrum Mask	Up to 26.5 GHz (Amplitude)	95%	+2.6 / -1.9 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty, the published guidance of the appropriate accreditation body is followed.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

9. Measurement Methods

9.1. Conducted RF Output Power

There is no conducted power limit specified in FCC Parts 21 and 74 for this test, it has been recorded as a requirement of FCC Part 2.1046, as such, no compliancy statement has been made for this test.

The Levels obtained are also used in conjunction with spurious attenuation measurements where the results are based on the conducted carrier power (P).

The test was performed in an indoor laboratory environment.

The EUT was connected to a power meter with an average power head, cable, and RF attenuators.

The connection was made to the EUT antenna port.

The total loss of the cables & attenuators were measured and entered as a reference level offset into the power meter to correct for the losses.

The EUT was set to a specified channel and the transmitter set to operate at full power.

This test was carried out on the bottom, middle and top channels.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

9.2. Effective Isotropic Radiated Power (EIRP)

In order to obtain an EIRP measurement the manufacturer's declared antenna gain was added to the measured conducted output power.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

9.3. Frequency Stability

The EUT was situated within an environmental test chamber and connected directly to the GSM test set via an air link radiated from the antenna.

Measurements were performed with the EUT operating under extremes of temperature in 10 degree increments within the range –30 to 50 Deg C.

Measurements were also performed at voltage extremes between the declared nominal supply voltage and at the declared endpoint voltage.

The requirement was to determine the frequency stability of the device under specified environmental operating conditions and ensure they remained within specified operating parameters.

Measurements were made on the top, and bottom channels set described in Appendix 1.

Once the environmental chamber had reached thermal equilibrium, the nominal frequency of the EUT was measured and recorded. The recorded frequency was compared to the allowed error in ppm (parts per million).

In order to show compliance, the measured frequency must remain within the allowed ppm limit.

The reported data shows the nominal frequency drift and its margin from the allowed ppm error. If this margin is positive, the result is compliant. If it goes negative, the result is not compliant. There is also a frequency graph presented offering the frequency variation around nominal frequency.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

9.4. Occupied Bandwidth

The EUT was connected to a spectrum analyser enabled with an occupied bandwidth function.

Measurements were performed to determine the Occupied Bandwidth in accordance with FCC Part 2.1049. The Occupied Bandwidth was measured from the fundamental emission at the bottom middle and top channels.

The Occupied Bandwidth was measured using the built in occupied bandwidth function of the spectrum analyser. It was set to measure the bandwidth where 99% of the signal power was contained.

Test Of: IPWireless U.K. Ltd.**UE P1D Model: KF****To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001**

9.5. AC Mains Conducted Emissions

AC mains conducted emissions measurements were performed in accordance with the standard, against appropriate limits for each detector function.

The test was performed in a shielded enclosure with the equipment arranged as detailed in the standard on a wooden bench using the floor of the screened enclosure as the ground reference plane.

Initial measurements in the form of swept scans covering the entire measurement band were performed in order to identify frequencies on which the EUT was generating interference. In order to minimise the time taken for these swept measurements, a Peak detector was used in conjunction with the appropriate detector IF measuring bandwidths (see table below). Repetitive scans were performed to allow for emissions with low repetition rates, and the duty cycle of the EUT. The test configuration was the same for the initial scans as for the final measurements.

During the swept measurements (and also during subsequent final measurements on single frequencies) any signals found to be between the limit and a level 6 dB below it were further maximised by changing the configuration of the EUT, e.g. re-routing cables to peripherals and moving peripherals with respect to the EUT.

Following the initial scans, a graph was produced giving an overview of the emissions from the EUT plotted against the appropriate specification limit. A tolerance line was set 6 dB below the specification limit and levels above the tolerance line were re-tested (at individual frequencies) using the appropriate detector function.

The test equipment settings for conducted emissions measurements were as follows:

Receiver Function	Initial Scan	Final Measurements
Detector Type:	Peak	Quasi-Peak (CISPR)/Average
Mode:	Max Hold	Not applicable
Bandwidth:	10 kHz*	9 kHz*
Amplitude Range:	60 dB	20 dB
Measurement Time:	Not applicable	> 1 s
Observation Time:	Not applicable	> 15 s
Step Size:	Continuous sweep	Not applicable
Sweep Time:	Coupled	Not applicable

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

9.6. Conducted Emissions Measurements

The test was performed in a laboratory environment.

Spurious emission measurements at the antenna port were performed from the lowest declared frequency to 10 times the highest EUT fundamental frequency as shown in Section 2.4 of this report, rounded up for convenience.

A spectrum analyser was connected to the antenna port of the EUT via a suitable cable and RF attenuator. The total loss of both the cable and the attenuator were measured and entered as a reference level offset into the measuring receiver to correct for the losses.

The frequency band described above was investigated with the transmitter operating at full power on the bottom, middle and top channels. Any spurious emissions noted were then measured.

The recorded emission level was then calculated as a spurious attenuation level using the following formula as described in TIA_EIA_603A.

$$\text{dB} = 10 \log_{10} \left(\frac{\text{TX power in watts}}{0.001} \right) - \text{spurious level (dBm)}$$

For frequencies further than 3MHz from the applicable channel edge the emissions shall be attenuated by at least $43 + 10 \log(P)$ dB below the transmitter power (P), where (P) is the average 6 MHz channel transmitter output power level measured for the channel under test. Since the transmitter output power was measured as an absolute level using a power meter the attenuation limit was adjusted according to FCC Section 21.908(d) for a reference channel bandwidth of 6 MHz (compared to the nominal 12 MHz channel) and 21.908(e) for absolute power measurements ($A + 10\log(C_{BW}/R_{BW})$ where $C_{BW} = 6$ MHz and R_{BW} = bandwidth for the emissions measurement, 100 kHz, 1MHz or 3 MHz).

The tabulated results in the results section of this report show the spurious emission in dBm and as attenuation relative to the carrier in dBc.

Test Of: IPWireless U.K. Ltd.

UE P1D Model: KF

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

Conducted Emissions Measurements (Continued)

For the frequency ranges close to and including the fundamental frequency, plots of the spectral distribution were recorded using a spectrum analyser for the EUT transmitting on bottom, middle & top channels. Plots can be found at Appendix 4. The method is in accordance with the relative power measurement method from FCC Part 21.908(e). A resolution bandwidth of 100 kHz was used throughout thus no bandwidth adjustment was required to the limits.

FCC Part 21.908(d) states that the maximum out-of-band power of an MDS response station using all or part of a 6 MHz channel, employing digital modulation and transmitting with an EIRP no greater than -6 dBW per 6 MHz channel shall be attenuated at the channel edges at least 25 dB relative to the average 6 MHz channel transmitter output power level (P), then attenuated along a linear slope to at least 40 dB or $33+10\log(P)$ dB, whichever is the lesser attenuation, at 250 kHz beyond the nearest channel edge, then attenuated along a linear slope from that level to at least 60 dB or $43+10\log(P)$ dB, whichever is the lesser attenuation, at 3 MHz above the upper and below the lower licensed channel edges, and attenuated at least 60 dB or $43+40\log(P)$ dB, whichever is the lesser attenuation, at all other frequencies.

The test equipment settings for conducted antenna port measurements were as follows:

Receiver Function	Settings
Detector Type:	Average
Mode:	Max Hold
Bandwidth:	As shown on plots
Amplitude Range:	100 dB
Step Size:	Continuous sweep
Sweep Time:	Coupled

9.7. Radiated Emissions

Radiated emissions measurements were performed in accordance with the standard, against appropriate limits for each detector function.

Initial pre-scans covering the entire measurement band from the lowest generated frequency declared up to 'n' times the highest fundamental frequency stated in section 2.5 of this report where 'n' is either 5 or 10 dependant upon whether the emission was produced via a transmitter/receiver or idle mode.

The pre-scans were performed within a screened chamber in order to identify frequencies on which the EUT was generating spurious.

This procedure identified the frequencies from the EUT, which required further examination.

The initial scans were performed using an antenna height of 1.5 m and at a measurement distance of 3 m.

A limit line was set to the specification limit by characterising the screen room using a known signal source set at exactly the same location as the EUT.

The signal source was derived from either a horn antenna or a dipole dependant on the frequency band under investigation.

Any levels within 20dB of this limit were measured where possible, on occasion; the receiver noise floor came within the 20dB boundary. On these occasions, the system noise floor may have been recorded.

An open area test site was then used with the EUT being set to the appropriate test distance.

A measurement receiver with a peak detector was used for final measurements at each frequency recorded in the screen room.

The levels were maximised by initially rotating the turntable through 360° and then varying the antenna height between 1 m and 4 m in the vertical polarisation.

At this point, any signals found to be between the limit and a level 6 dB below it were further maximised by changing the configuration of the EUT, e.g. re-routing cables to peripherals and moving peripherals with respect to the EUT.

The above procedure was repeated for the horizontal polarisation.

Once the final amplitude (maximised) had been obtained, the EUT was substituted with an antenna. For EIRP measurements a Horn antenna whose gain was based on an isotropic antenna was used, ERP measurements were done using a dipole.

To: FCC Part 15: 2001, Part 21: 2001 & Part 74: 2001

Radiated Emissions (Continued)

The centre of the substitution antenna was set to approximately the same centre location as the EUT.

The substitution antenna was set to the horizontal polarity.

The substitution antenna was matched into a signal generator using a 6dB or greater PAD.

The signal generator was tuned to the spurious emission frequency under investigation.

The test antenna was raised and lowered to obtain a maximum reading on the spectrum analyser.

The level of the signal generators output was then adjusted until the maximum level recorded earlier from the EUT was observed.

The signal generator level was noted.

This procedure was repeated with both test antenna and substitution antenna vertically polarised.

The radiated power was calculated as:-

$$\text{EIRP/ERP} = \text{Signal Generator Level} - \text{Cable Loss} + \text{Antenna Gain}$$

The limit is calculated according to FCC Section 21.908(e) for absolute power measurements ($A + 10\log(C_{BW}/R_{BW})$ where $C_{BW} = 6 \text{ MHz}$ and $R_{BW} = \text{as stated on the plot}$).
