

General

The MT900 is a LMRS/GMRS, UHF transceiver which is mobile mounted with radiating antenna mounted outside the vehicle and transmitting with output power less than 40 Watts. Per table 1 of 1.1307, paragraphs 1.1310 and 2.1091 of CFR 47, evaluation for this device is as follows. Due to the location of the antenna, normal operating conditions and use, the unit will satisfy the requirements for RF Exposure. Calculations are made here for completeness.

SPECIFIC ABSORPTION RATE CALCULATION

Calculations per 2.1091 of CFR 47.

These calculations are based upon a typical human figure as approximated below. The height is 5' 8" (173 cm.) and the weight is 160 lbs. (72.6kg).

The calculated absorption cross section for this figure is 143 cm squared.

CALCULATED OCCUPATIONAL / CONTROLLED POPULATION SAR

$$S = PG/(4\pi R^2)$$

Where S = power density in mw/cm²

P = input power to antenna in mw.

G = power gain of antenna

R = distance from antenna in cm.

For a minimum distance of 46 centimeters and 40.0 watts (40,000 mW) operation with the supplied antenna, S is:

$$S = 40000(1)/(4\pi(46)^2) = 1.5043 \text{ mw/cm}^2$$

For a body cross sectional area of 143 cm squared, (1.5043)(143) = 215.11 mw is absorbed.

For a body mass of 72.6 kg, this is 215.11/72.6 = 2.96 mw/kg = 0.003 w/kg

Calculations demonstrating compliance with CFR 47 paragraphs 1.1310 and 2.1091 are show below.

MPE Calculator MPE uses EIRP for calculation. EIRP is based on TX power added to the antenna gain in dBi.
dBi = dB gain compared to an isotropic radiator.
S = power density in mW/cm²

Antenna Gain (dBi) 0
Output Power dBi + 2.17 = dBi dBi to dBd 2.17
Tx Frequency (MHz) 460 Average (Watts) 40.0000 Antenna Gain (dBd) -2.17
Cable Loss (dB) 0.0 (dBm) 46.02 Antenna minus cable (dBi) 0.00

Calculated ERP (mw) 24269.453
Calculated EIRP (mw) 40000.000

EIRP = Po(dBm) + Gain (dB)
Radiated (EIRP) dBm 46.021
ERP = EIRP - 2.17 dB
Radiated (ERP) dBm 43.851

Occupational Limit
