Statement of Compliance

Evaluation was performed based on FCC 47 CFR 2.1091 and IEEE C95.1:2005, together with the “General Population / Uncontrolled” requirements set out in FCC 47 CFR 1.1310 Table 1 (B)

The calculations below show that the OSDP card Reader / FCC ID: PNB-AXISA4120-E device is compliant with these requirements at a distance of 20cm for all supported wireless transmitter technologies

2.2 Device Usage and Evaluation Distance

The device is an RFID card reader for access control. An evaluation distance of 20cm has been selected

2.3 Wireless Technologies and Bands Supported by the EUT

Technology	Band	Frequency Range (Tx)	Evaluation Performed*
13.56 MHz RFID	HF	13.553 MHz – 13.567 MHz	YES

2.4 Simultaneous Transmission Configurations

No simultaneous transmission configurations are supported by the device

2.5 Coil Current, Voltage and E-Field Strength

0.3 - 1.34	614	1.63	*100	30
1.34 - 30	824/f	2-19/f	*180/f ²	30
30 - 300	27.5	0.073	0.2	30
300 - 1500	-	-	f/1500	30
1500 - 10000	-	-	1.0	30

Notes:

1. f = frequency in MHz
2. * = Plane-wave equivalent power density

4. EVALUATION DETAILS

4.1 Electric Field Strength at 20cm Distance for Each Band and Technology

Based on the assumption of a $1/r^3$ electric field roll-off with distance r , the maximum measured electric field strength at 3m can be used to calculate the maximum electric field strength at distance r from the DUT

$$E_r = E_{3m} + 20 \log \left[\left(\frac{3}{r} \right)^3 \right]$$

Where:

- r is the distance from the device in meters
- E_r is the field strength at distance r (in dB μ V/m)
- E_{3m} is the maximum field strength measured at 3m

The limit for E_r in this case, from the table above is: $(824 / 13.56) \text{ V/m} = 60.77 \text{ V/m}$ or 155.67 dB μ V/m

The E-field strength at 20cm from the device has been calculated below and compared to the limit:

Technology	Band	E_{3m} dB μ V/m	r (m)	E_r dB μ V/m	E_r V/m	Limit V/m
13.56 MHz RFID	HF	60.50	0.2	131.34	3.69	60.77
