

Description of Operation

EUT is a 802.11b/g Wireless Access Point / Ethernet Bridge with 11 channels.

This device provided a convergence procedure for the 2, 5.5, and 11 Mbps mandatory 802.11b modes, and the optional CCK-OFDM modes at 6, 9, 12, 18, 24, 36, 48, and 54Mbit/s specification in which PSDUs are converted to and from PPDU. The device adapts Direct Sequence Spread Spectrum (DSSS) and Orthogonal Frequency Division Multiplexing (OFDM) modulation. The antenna is Dipole Antenna, and there is no external connector.

This 802.11b/g Wireless Access Point / Ethernet Bridge is an IEEE 802.11b/g Wireless LAN adapter. It allows your computer to connect to a wireless network and to share resources, such as files or printers without being bound to the network wires. Operation in 2.4GHz Direct Sequence Spread Spectrum (DSSS) and Orthogonal Frequency Division Multiplexing (OFDM) radio transmission, the 802.11b/g PCI adapter card transfers data at speeds up to 64/128-bit Wired Equivalent Protection (WEP) algorithm is used. In addition, its standard compliance ensures that it can communicate with any 802.11g network.
