

RF TEST REPORT

Report No.: FCC_RF_SL15032301-SLX-004
Supersede Report No.: NONE

Applicant	:	Philips Medical Systems
Product Name	:	SDIO Wireless Module
Model No.	:	PH-SDMAN
Test Standard	:	47 CFR 15.247
Test Method	:	ANSI C63.10: 2009 558074 D01 DTS Meas Guidance v03r02
FCC ID	:	PQC-MX40WL3
IC ID	:	3549B-MX40WL3
Dates of test	:	04/22/2015-04/29/2015
Issue Date	:	05/07/2015
Test Result	:	☒ Pass ☐ Fail
Equipment complied with the specification [X] Equipment did not comply with the specification []		

This Test Report is Issued Under the Authority of:

	
Nima Molaei	David Zhang

Laboratory Introduction

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

Report No.	Report Version	Description	Issue Date
FCC_RF_SL15032301-SLX-004	None	Original	05/07/2015

2 Executive Summary

The purpose of this test program was to demonstrate compliance of following product

Company: Philips Medical Systems
Product: SDIO Wireless Module
Model: PH-SDMAN

against the current Stipulated Standards. This report is not a complete test report compliant to Stipulated Standard listed on 1st page. The purpose of this report is to present additional measurement data for 11g and 11n-20 mode only due to the increase of output power with higher power level setting.

All other modes will keep the same power level setting thus having the same output power. No extra measurement is required for these modes and please refer to original report (Report No. : 32IE0154-HO-01)

6 EUT Information

6.1 EUT Description

Product Name	: SDIO Wireless Module
Model No.	: PH-SDMAN
Trade Name	: Philips Medical
Serial No.	: 84253F010282
Host Model No.	: N/A
EUT DC Input Power	: 3.3VDC
Adapter Input Power	: N/A
Power Adapter SN	: N/A
Product Hardware version	: rev A
Product Software version	: V3.4.158.35
Radio Hardware version	: rev A
Radio Software version	: V3.4.158.35
Test Software version	: Athtestcmd v3.4
Date of EUT received	: 11/10/2014
Equipment Class/ Category	: DTS, UNII
Port/Connectors	: N/A

6.2 Radio Description

Radio Type	802.11b	802.11g	802.11a	802.11n-20M	802.11n-40M
Operating Frequency	2412-2462MHz	2412-2462MHz	5180-5240MHz 5260-5320MHz 5500-5700MHz 5725-5825MHz	2412-2462MHz 5180-5240MHz 5240-5320MHz 5500-5700MHz 5725-5825MHz	2422-2452MHz 5190-5230MHz 5270-5310MHz 5510-5670MHz 5755-5795MHz
Modulation	DSSS (CCK, DQPSK, DBPSK)	OFDM-CCK (BPSK, QPSK, 16QAM, 64QAM)	OFDM (BPSK, QPSK, 16QAM, 64QAM)	OFDM (BPSK, QPSK, 16QAM, 64QAM)	OFDM (BPSK, QPSK, 16QAM, 64QAM)
Channel Spacing	5MHz	5MHz	20MHz	5MHz(2.4GHz), 20MHz (5GHz)	40MHz
Number of Channels	11	11	19	11(2.4GH) 19 (5GHz)	7(2.4GH) 9(5GHz)
Antenna Type	Philips P/N (453564553001r1444) Note: Laird antenna (Model: MAP24174 with short cable) Philips P/N (453564252521r1444) Note: Laird antenna (Model: MAP24174 with long cable)				
Antenna Gain (Peak)	3.9dBi (2.4~2.5GHz), 4.1dBi (4.9~5.8GHz) - P/N (453564252521r1444) 4.2dBi (2.4~2.5GHz), 4.4dBi (4.9~5.8GHz) - P/N (453564553001r1444)				
Antenna Connector Type	U. FL connector				

6.3 EUT test modes/configuration Description

802.11 g/n-2.4GHz

Test Item	Operating mode	Tested antenna port	Test frequencies
Peak output Power	Cont-TX, 11g, 11n-20	TX port 1,2	Low, Mid, High
Peak Spectral Density	Cont-TX, 11g, 11n-20	TX port 1,2	Low, Mid, High
Transmitter Radiated Spurious Emissions	Cont-TX, 11g, 11n-20	TX port 1,2	Low, Mid, High
Note:	This report is not a complete test report compliant to Stipulated Standard listed on 1st page. The purpose of this report is to present additional measurement data for 11g and 11n-20 mode only due to the increase of output power with higher power level setting. All other modes will keep the same power level setting thus having the same output power. No extra measurement is required for these modes and please refer to original report (Report No.: 32IE0154-HO-01) EUT has 2 chains however they will not transmit simultaneously. Both chains were evaluated, they have similar results. So, only worse case result was represented in this report.		

6.4 EUT Power Level Setting

Channel	Frequency	Mode	Power Setting
1	2412	802.11g	13
7	2437	802.11g	13
13	2462	802.11g	13
1	2412	802.11n-20	11
7	2437	802.11n-20	11
13	2462	802.11n-20	11

6.5 Test Software Description

Item	Software	Description

Remark	- All measurement uncertainties do not take into consideration for all presented test results. - The applicant shall ensure frequency stability by showing that an emission is maintained within the band of operation under all normal operating conditions as specified in the user's manual. - This report is not a complete test report compliant to Stipulated Standard listed on 1st page. The purpose of this report is to present additional measurement data for 11g and 11n-20 mode only due to the increase of output power with higher power level setting. All other modes will keep the same power level setting thus having the same output power. No extra measurement is required for these modes and please refer to original report (Report No.: 32IE0154-HO-01)				

9 Measurement Uncertainty

Emissions			
Test Item	Frequency Range	Description	Uncertainty
Band Edge and Radiated Spurious Emissions	30MHz – 1GHz	Confidence level of approximately 95% (in the case where distributions are normal), with a coverage factor of 2 (for EUTs < 0.5m X 0.5m X 0.5m)	+5.6dB/-4.5dB
Band Edge and Radiated Spurious Emissions	1GHz – 40GHz	Confidence level of approximately 95% (in the case where distributions are normal), with a coverage factor of 2 (for EUTs < 0.5m X 0.5m X 0.5m)	+4.3dB/-4.1dB

10 Measurements, Examination and Derived Results

10.1 Peak Output Power

Requirement(s):

Spec	Item	Requirement	Applicable
§ 15.247	a)	FHSS in 2400-2483.5MHz with ≥ 75 channels: ≤ 1 Watt	☐
	b)	FHSS in 5725-5850MHz: ≤ 1 Watt	☐
	c)	For all other FHSS in the 2400-2483.5MHz band: ≤ 0.125 Watt.	☐
	d)	FHSS in 902-928MHz with ≥ 50 channels: ≤ 1 Watt	☐
	e)	FHSS in 902-928MHz with ≥ 25 & < 50 channels: ≤ 0.25 Watt	☐
	f)	DSSS in 902-928MHz, 2400-2483.5MHz, 5725-5850MHz: ≤ 1 Watt	☒
Test Setup			
Test Procedure	<u>Measurement using a Power Meter (PM)</u> Measurements may be performed using a wideband gated RF power meter provided that the gate parameters are adjusted such that the power is measured only when the EUT is transmitting at its maximum power control level. Since the measurement is made only during the ON time of the transmitter, no duty cycle correction factor is required. - Connect EUT's RF output power to power meter - Set EUT to be continuous transmission mode - Measurement the average output power using power meter and record the result - Repeat above steps for different test channel and other modulation type.		
Test Date	04/27/2015	Environmental condition	Temperature 23°C Relative Humidity 44% Atmospheric Pressure 1021mbar
Remark	This report is not a complete test report compliant to Stipulated Standard listed on 1st page. The purpose of this report is to present additional measurement data for 11g and 11n-20 mode only due to the increase of output power with higher power level setting. All other modes will keep the same power level setting thus having the same output power. No extra measurement is required for these modes and please refer to original report (Report No.: 32IE0154-HO-01)

Output power	802.11n-20M	2462	High	10.9	30	Pass

Note: EUT has 2 chains however they will not transmit simultaneously. Both chains were evaluated, they have similar results. So, only worse case result was represented in this report.

10.2 Band Edge

Requirement(s):

Spec	Item	Requirement	Applicable
§ 15.247	d)	For non-restricted band, In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB or 30dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, determined by the measurement method on output power to be used. Attenuation below the general limits specified in § 15.209 (a) is not required ☐ 20 dB down ☒ 30 dB down	☒
Test Setup			
Test Procedure	558074 D01 DTS Meas Guidance v03r02 <u>Band Edge measurement procedure</u> 1. Set the EUT to maximum power setting and enable the EUT transmit continuously. 2. Band edge emissions must be at least 30 dB down from the highest emission level within the authorized band as a measured. The attenuation shall be 30 dB instead of 20 dB when RMS conducted output power procedure is used. 3. Change modulation and channel bandwidth then repeat step 1 to 2. 4. Measured and record the results in the test report.		
Test Date	04/29/2015	Environmental condition	Temperature 22°C Relative Humidity 46% Atmospheric Pressure 1020mbar
Remark	This report is not a complete test report compliant to Stipulated Standard listed on 1st page. The purpose of this report is to present additional measurement data for 11g and 11n-20 mode only due to the increase of output power with higher power level setting. All other modes will keep the same power level setting thus having the same output power. 10.4 Transmitter Radiated Spurious Emissions Below 1GHz

Requirement(s):

Spec	Item	Requirement	Applicable										
47CFR§15.247(d)	a)	Except higher limit as specified elsewhere in other section, the emissions from the low-power radio-frequency devices shall not exceed the field strength levels specified in the following table and the level of any unwanted emissions shall not exceed the level of the fundamental emission. The tighter limit applies at the band edges <table><thead><tr><th>Frequency range (MHz)</th><th>Field Strength (uV/m)</th></tr></thead><tbody><tr><td>30 – 88</td><td>100</td></tr><tr><td>88 – 216</td><td>150</td></tr><tr><td>216 960</td><td>200</td></tr><tr><td>Above 960</td><td>500</td></tr></tbody></table>	Frequency range (MHz)	Field Strength (uV/m)	30 – 88	100	88 – 216	150	216 960	200	Above 960	500	☒
Frequency range (MHz)	Field Strength (uV/m)												
30 – 88	100												
88 – 216	150												
216 960	200												
Above 960	500												
Test Setup	The diagram illustrates the test setup. On the left, 'EUT & Support Units' are placed on a 'Turn Table' which is 80cm high. A horizontal distance of 3m separates the turn table from the 'Ant. Tower'. The antenna is mounted on a vertical pole with a '1-4m Variable' height adjustment. A 'Test Receiver' is connected to the antenna via a cable. The entire setup sits on a 'Ground Plane'.												
Procedure	1. 2. 3. 4. The EUT was switched on and allowed to warm up to its normal operating condition. The test was carried out at the selected frequency points obtained from the EUT characterisation. Maximization of the emissions, was carried out by rotating the EUT, changing the antenna polarization, and adjusting the antenna height in the following manner: a. b. c. Vertical or horizontal polarisation (whichever gave the higher emission level over a full rotation of the EUT) was chosen. The EUT was then rotated to the direction that gave the maximum emission. Finally, the antenna height was adjusted to the height that gave the maximum emission. A Quasi-peak measurement was then made for that frequency point. Steps 2 and 3 were repeated for the next frequency point, until all selected frequency points were measured.												
Remark	The EUT was scanned up to 1GHz. Both horizontal and vertical polarities were investigated. The results show only the worst case. This report is not a complete test report compliant to Stipulated Standard listed on 1st page. The purpose of this report is to present additional measurement data for 11g and 11n-20 mode only due to the increase of output power with higher power level setting. All other modes will keep the same power level setting thus having the same output power. No extra measurement is required for these modes and please refer to original report (Report No.: 32IE0154-HO-01)

Note: Both horizontal and vertical polarities were investigated. The results above show only the worst case.

10.5 Transmitter Radiated Spurious Emissions Above 1GHz

Requirement(s):

Spec	Item	Requirement	Applicable
47CFR§15.247(d)	a)	For non-restricted band, In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB or 30dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, determined by the measurement method on output power to be used. Attenuation below the general limits specified in § 15.209(a) is not required ☐ 20 dB down ☒ 30 dB down	☒
	b)	or restricted band, emission must also comply with the radiated emission limits specified in 15.209	☒
Test Setup			
Procedure	- The EUT was switched on and allowed to warm up to its normal operating condition. - The test was carried out at the selected frequency points obtained from the EUT characterisation. Maximization of the emissions, was carried out by rotating the EUT, changing the antenna polarization, and adjusting the antenna height in the following manner: - Vertical or horizontal polarisation (whichever gave the higher emission level over a full rotation of the EUT) was chosen. - The EUT was then rotated to the direction that gave the maximum emission. - Finally, the antenna height was adjusted to the height that gave the maximum emission. - An average measurement was then made for that frequency point. - Steps 2 and 3 were repeated for the next frequency point, until all selected frequency points were measured.		
Remark	The EUT was scanned up to 40GHz. Both horizontal and vertical polarities were investigated. The results show only the worst case. This report is not a complete test report compliant to Stipulated Standard listed on 1st page. The purpose of this report is to present additional measurement data for 11g and 11n-20 mode only due to the increase of output power with higher power level setting. All other modes will keep the same power level setting thus having the same output power. No extra measurement is required for these modes and please refer to original report (Report No.: 32IE0154-HO-01)		
Result	☒ Pass ☐ Fail
