**ANTENNA SPECIFICATION****11. PRODUCTION SITE****12. QUALIFICATION FLOW CHART****1. PURPOSE AND SCOPE**

The purpose of this document is to establish a **product** specification for the antenna product that Galtronics is developing for the LGE for their wireless handset. This specification is preliminary. Any changes or additions to this specification can affect schedule and/or cost of the product and should be negotiated between Galtronics and the LGE before being incorporated into the specification. Upon agreement of this specification Galtronics will make no changes without the written approval from the LGE. Any changes requested by the LGE will be given to Galtronics with sufficient time to evaluate the cost impact and react as required. The development of the product in Galtronics is conducted according to the Design Control Procedure SOP006E.

2. RELATED DOCUMENTS

SOP006E	Product Launch Procedure (Design Control)

mm	Millimeter
N	Newton
PCB	Printed Circuit Board
RH	Relative Humidity
W	Watt

Design specification: A preliminary target specification to guide design process

Product specification: A final specification for the qualified product

4. DESCRIPTION AND PART NUMBERS**4.1 DESCRIPTION**

This antenna is a base helical retractable for use on a wireless handset. This antenna shall consist of two electromechanical pieces: A whip and a base. The whip shall extend and retract through the center of a fixed base lower helical, which is mounted to the handset via a screw thread interface. The whip element shall function in the full up position and the base helical shall function in the down position. The electrical, mechanical, and industrial design parameters required for this antenna are described below.

4.2 PART NUMBER

Galtronics Part Number	Color	Frequency Band
02-4128-46-946	Pantone: White Gray 427C	824 - 894 MHz
02-4128-46-946B	Black	824 - 894 MHz
02-4128-46-946G	Pantone: Cool Gray 7C	824 - 894 MHz

5. ELECTRICAL SPECIFICATION

5.1 FREQUENCY BANDS

Band Name	Frequency Band
CDMA	824 - 894 MHz

5.2 IMPEDANCE

Nominal impedance (including matching circuit) : 50Ω

5.3 MATCHING REQUIREMENTS

In order to assure the best performance of the antenna, the matching will be evaluated in free space and in talk position for both extended and retracted position.

The antenna will comply with the Electrical Specification requirements, as set out below, while mounted on the handset containing the PCB. The handset with PCB are to be supplied by the customer and should be representative of the latest design version of all parts. Any modifications in the handset or PCB can affect the performance of the antenna and should be discussed with Galtronics to determine the affect of such changes on antenna performance and delivery requirements.

5.4 VSWR

5.4.1 Requirements in free space

Mode	Tx	Rx
Extended	2.5 :1	2.5 :1
Retracted	2.5 :1	3.0 :1

Transmit Band (Herein designated as Tx) -the frequencies of operation for the Band transmit function shall be 824 to 849 MHz.

Receive Band (Herein designated as Rx) -the frequencies of operation for the Band receive function shall be 869 to 894 MHz.

5.4.2 Test Method (Engineering)

The antenna is tested while mounted to the handset. The handset is set up with a 50Ω coaxial cable connected to the 50Ω point. Calibration is done at this 50Ω point. The other end of the 50Ω coaxial cable is connected to a network analyzer. The handset is positioned on a non-conductive table for free space measurements. VSWR is also evaluated in talk position on a phantom head for reference only.

5.4.3 Test Method (Production)

In mass production it is not practical to use the handset supplied by the customer. A production test fixture will be designed by Galtronics for use on processes requiring electrical testing. The results on the test fixture will be correlated to the results obtained on the customer handset. Testing in final inspection is done on a statistical basis.

**ANTENNA SPECIFICATION****5.5 GAIN****5.5.1 Gain Values(Free Space)**

Mode	The average Gain in azimuth in free space		The Gain in best direction in elevation in free space	
	Tx	Rx	Tx	Rx
Extended	-1.0 dBi	-0.5 dBi	0 dBi	0.5 dBi
Retracted	-2.0 dBi	-2.5 dBi	-1.0 dBi	-2.0 dBi

5.5.2 Test Method

The antenna is tested while mounted to the handset. The antenna is tested in free space in the anechoic chamber. Radiation patterns are measured at a minimum of 3 different frequencies.

5.6 POWER RATING**5.6.1 Requirements**

Maximum value: 1 W

5.6.2 Test Method

The antenna is connected to the handset housing as described in 5.4.2. A power of 1 W is applied to the antenna for a period of 30 min. for extended and retracted position at room temperature ($+20^{\circ}\pm 3^{\circ}\text{C}$). The antenna shall satisfy electrical requirements in 5.4.1 after the test and have no visible deterioration.

6. MECHANICAL SPECIFICATIONS**6.1 MECHANICAL CONFIGURATION**

The appearance of the antenna is according to drawing 02-4128-46-946.

6.2 CONNECTOR TYPE**6.2.1 Type**

The connector type is M4X0.5 Threaded Mount Boss (See DWG 22-151-03).

6.2.2 Materials

The connector base material is Free Cutting Brass (ISOCuZn39Pb3) with 7 μ Bright nickel plating (Cu/Ni7b ISO 1458-1988).

6.3 RETRACTION FORCES**6.3.1 Requirements for initial values**

Position	Force range (N)
F1	0.5-5.0
F2	0.5-5.0
F3	0.5-5.0
F4	0.5-5.0

(See Figure 1 below for definition of F designations)

Figure 1. Force Designation for Retraction Forces

6.3.2 Test Method

The antenna is held fixed by the connector and gripped by the antenna cap. The antenna is moved from each position at a speed of 5 mm/s. The maximum force before the antenna is released is recorded. The mean force of 3 measurements for each position shall be within the specified values in 6.3.1.

6.4 WHIP TENSILE LOAD

6.4.1 Requirement

50 N axial pull force for 30 seconds.

6.4.2 Test Method

With the antenna connector mounted in an appropriate test fixture, apply axial tension load 50 N along the longitude axis to the antenna cap during 30 seconds Whip element fully extended. The sample is subjected to visual checking as well as to checking of electrical and mechanical working characteristics and must not have suffered from irreversible mechanical and electrical damage.

Figure 2. Method for Pull Strength Measurement

6.5 DROP TEST

The antenna is attached to a dummy weighted radio (120 g). It should withstand 2 drops directed towards the antenna onto a steel plate 500x500mm with thickness of 20 mm. The drop height is 1.5 m. The drop tests will be done in retracted position with the angle to vertical 45°. The antenna shall satisfy the electrical specifications in 5.4.1 after the test. The antenna should function mechanically after the test. The antenna can be physically straightened at the end of the test. Temperature of the environment $+24^{\circ}\text{C} \pm 3^{\circ}\text{C}$.

6.6 HELIX TORQUE

6.6.1 Requirements

No electrical or mechanical deformation is admitted when the helical is turned with a torque of 25 Ncm.

6.6.2 Test Method

Torque test of the helical. The helical is fixed onto a test bench and the torque gauge chuck is applied to the top of the helical. The chuck of the gauge is then turned clockwise until the torque reaches 25 Ncm. The helical plastic must not rotate in relation to the fixture. No change of the electrical parameters from the specified range may be allowed. The test is shown in Figure 3.

Figure 3. Torque test accomplishment

6.7 HELIX BENDING

With the antenna connector mounted in an appropriate test fixture, apply lateral load 40 N to the helix with bend of helix no more than 30°. Whip element inserted. The sample is subjected to visual checking as well as to checking of electrical and mechanical working characteristics and must not have suffered from irreversible mechanical and electrical damage.

6.8 HELIX TENSILE LOAD

With the antenna connector mounted in an appropriate test fixture, apply axial tension load 50 N along the longitude axis to the helix. Whip element inserted. The sample is subjected to visual checking as well as to checking of electrical and mechanical working characteristics and must not have suffered from irreversible mechanical and electrical damage.

**ANTENNA SPECIFICATION****6.9 TUBE ATTACHMENT**

The tube shall withstand a 0.5N force (parallel to the antenna axis) without detachment from the connector.

6.10 TAPE TEST

Adhere Cello Tape (width 50mm, length 50-100mm, adhesion force 240-400 gr) onto Cr plated cap of antenna, and then take off it in fast speed while maintaining 15 degree. 5 times repeatedly. Pass condition: Plating condition should be the same as original one. Any pieces of plating should not be adhered on the tape.

6.11 ASSEMBLY/DISASSEMBLY CYCLES

The antenna shall withstand 500 cycles of assembly / disassembly to the radio with no damage. The test shall be conducted manually between the antenna and radio handset.

7. ENVIRONMENTAL SPECIFICATIONS**7.1 TEMPERATURE CYCLING**

Place complete antenna in an environmental chamber at temperature T1=-40°C. Expose antenna to this temperature during 30 minutes. Then increase temperature to value of T2=80°C during 60 minutes and soak at this temperature during 30 minutes. Relative Humidity must be 50% RH. Repeat this cycle 10 times. After test is complete: there shall be no visual deterioration or damage. Electrical characteristics should be within the specified range.

7.2 SALT SPRAY

Place complete antenna in Salt Spray Cabinet at temperature +35°C with the salt fog of NaCl solution (5%); soak time - 96 hours. After test is complete: there shall be no visual degradation in esthetical and mechanical performance. Electrical characteristics should be within the specified range.

7.3 STATIC HUMIDITY

Place complete antenna in an environmental chamber at +20°C. Increase temperature with speed 1° per minute during 2 hours to +55° C with humidity increasing to 95% RH during 2 hours. Soak antenna with these parameters for 24 hours. After the finish initial ambient parameters should be achieved during 1 hour. After the test perform an inspection of the tested samples. After test is complete: there shall be no visual degradation in esthetical and mechanical performance. Electrical characteristics should be within the specified range.

7.4 LOW AND HIGH TEMPERATURE TEST

Place complete antenna in an environmental chamber at temperature +20°C. Decrease temperature with speed 1° per minute during 2 hours to -30°C during 2 hours. Soak antenna with these parameters for 24 hours. After the finish initial ambient parameters should be achieved during 1 hour. After the test perform an inspection of the tested samples. After test is complete: There shall be no visual degradation in esthetical and mechanical performance.

**ANTENNA SPECIFICATION**

Increase temperature with speed 1° per minute during 2 hours to $+80^{\circ}\text{C}$ with humidity increasing to 80% RH during 2 hours. Soak antenna with these parameters for 24 hours. After the finish initial ambient parameters should be achieved during 1 hour. After test is complete: there shall be no visual degradation in esthetical and mechanical performance. Electrical characteristics should be within the specified range.

7.5 THERMAL SHOCK TEST

Check antenna in 2 hours at room temperature after repeating 6 cycles by 2 hours from low temperature (-40°C) to high temperature ($+85^{\circ}\text{C}$) with temperature variation of 1 degree per second. Pass condition: There should not be crack, discoloration, deformation, getting loose, etc. Plating condition should be the same as original one.

7.6 RANDOM VIBRATION

The antenna shall withstand 6 G's RMS ($0.04\text{g}^2/\text{Hz}$) for 15 minutes in the vertical and horizontal axis. No appearance or function changes shall be found after the test.

7.7 OPERATING TEMPERATURE RANGE

The operational temperature range shall be: -30°C to $+80^{\circ}\text{C}$ at 50% RH.

8. RELIABILITY SPECIFICATIONS**8.1 CONNECTOR RELIABILITY**

The antenna shall withstand 10,000 retraction cycles. The antenna should be rotated periodically during the test. After testing the retraction forces should not be less than 50 grams.

8.2 WHIP BENDING ENDURANCE

With the antenna mounted in an appropriate test fixture, cycle the whip left/right 90° to the vertical 400 times at a rate of 20-30 cycles/min.

Conditions: At $+25^{\circ}\text{C}$, Whip element extended.

The sample is subjected to visual checking as well as to checking of electrical and mechanical working characteristics and must not have suffered from irreversible mechanical and electrical damage.

Figure 4. Method for Whip Bending Endurance Testing

**ANTENNA SPECIFICATION****8.3 WHIP BEND TEST.**

The antenna is assembled to the test equipment. A test fixture is attached to the top of the antenna's knob in extended position. The antenna is bent around a mandrel 40 mm. The antenna is released and sprung back to vertical position. Test shall be performed at the ambient temperature and humidity.

Remaining deformation shall be <0.5mm for each 40 mm of wire length. No fracture shall be revealed after the test.

9. QUALIFICATION

The mechanical, environmental and reliability tests mentioned above are performed according to the flow chart shown in Figure 5 below. The entire testing procedure will be conducted according to EN006E. A summary report of the results of the tests will be sent to the customer. Galtronics will not start mass production until the customer will grant the product a qualified status.

10. PACKAGING

The antennas will be packed in compartmentalized vacuum formed trays. There are 40 antennas per tray. (See Appendix) The trays are packed in a corrugated fiberboard over box, 28 trays per box. The over box will be labeled for shipping according to the standards outlined in EIA-STD-556 (See Figure 7).

Figure 7. Packaging (dimensions of overbox in cm)

The labels should provide following information:

- Supplier's Address;
- Customer's Address;
- Package Count;
- Package Weight;

- Ship Date;
- Ship Number;
- Sales Order Number;
- Vendor's Part Number;
- Package Identification (Bar Code);
- Special (Bar Code);
- Total Quantity (Bar Code);
- Transaction Identification (Bar Code);
- Customer Product Identification (Bar Code).

11. PRODUCTION SITE

The antennas will be manufactured by Galtronics Israel.
Address: P.O.Box 1589, Tiberias, Israel
Tel: 972-6-6739777
Fax: 972-6-6732037
