

Dear Sir or Madam:

The application for FCC certification PQTDORM08 will cover 2 unique part numbers, which are electrically identical. The PCBs are unchanged between each model. The only differences are in the software programmed into the MCU IC. The two different software versions transmit different signal patterns with different maximum duty cycles, and correspondingly different maximum output power levels.

The power output level is set within each software version, so it is not possible that a signal with higher maximum duty cycle would be transmitted at the higher output power level.

MODEL	DESCRIPTION	Buttons
13733	KEYLESS ENTRY REMOTE	3
13734	KEYLESS ENTRY REMOTE	3

Sincerely,

Matthew Barnard
