

## Operation Instruction PQTDORM28

The keyfob assembly consists of a plastic case with a 4 button cutout, a rubber button panel, a PCB and battery. It generates a Manchester encoded signal that is transmitted at 315MHz.

The keyfob uses an integrated RF MCU that detects button presses and calculates and transmits an encoded signal to a receiver. This signal is generated by an internal software controlled transmitter inside the MCU. It contains no external resonator. The antenna is integrated into the PCB.

| MODEL | DESCRIPTION          | Buttons |
|-------|----------------------|---------|
| 99359 | KEYLESS ENTRY REMOTE | 4       |
