The following test equipment are used during the radiated emission test in a semi-anechoic chamber:

Item	Type	Manufacturer	Model No.	Serial No.	Last Cal.	Cal. Interval
1.	Preamplifier	HP	8447D	2944A06849	May 02, 2001	1/2 Year

2.2 Block Diagram of Test Setup

2.3 Radiated Emission Limit

Frequency (MHz)	Distance (m)	Field strength limits (μV/m)	
		(μV/m)	dB(μV/m)
30 ~ 88	3	100	40.0
88 ~ 216	3	150	43.5
216 ~ 960	3	200	46.0
Above 960	3	500	54.0
NOTE 1 - Emission Level dB(μV/m) = 20 log Emission Level (μV/m) NOTE 2 - The tighter limit applies at the band edges. NOTE 3 - Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the device or system.			

2.4 Test Configuration

The EUT was installed as show on Sec. 2.2 in radiated emission test to meet FCC requirement and operating in a manner which tend to maximize emission level in a normal application.

2.5 Operating Condition of EUT

2.5.1 Setup the EUT as shown in Sec. 2.2.

2.5.2 The EUT worked in two attitudes (Side & Lie) and measured it.

2.6 Test Procedures

The EUT was placed on a turntable, which is 0.8 meter above the ground. The turntable rotated 360 degrees to determine the position of the maximum emission level. The EUT was set 3 meters away from the receiving antenna, which was mounted on an antenna tower. The antenna moved up and down between 1 meter and 4 meters to find out the maximum emission level. Broadband antenna (Calibrated Bilog Antenna) was used as a receiving antenna. Both horizontal and vertical polarization of the antenna were set on measurement. In order to find the maximum emission, all of the interference cables were manipulated according to ANSI C 63.4-1992 requirements during radiated emission test.

The bandwidth setting on Test Receiver 85422E is 120 kHz.

The frequency range from 30 MHz to 1000 MHz was checked.

2.7 Test Results

<PASS>

The frequency and amplitude of the highest radiated emission relative the limit is reported. All the emissions not reported below are too low against the FCC limit.

4.2 Bandwidth Limit

The bandwidth of the emission shall be no wider than 0.25% of the center frequency.

Bandwidth is determined at the points 20dB down from the modulated carrier.

Bandwidth Limit = $0.25\% \times 315(\text{MHz}) = 0.7875(\text{MHz})$

4.3 Test Results

<PASS>

The bandwidth of the Fundament emission is

B.W. = $314.961 - 314.921 = 0.040\text{MHz}$

(M/N: RFRC10-A)

B.W. = $315.042 - 314.988 = 0.054\text{MHz}$

(M/N: ERX15-A)

(See Appendix II)

5 OPERATION DESCRIPTION

Radio Remote Controller (M/N: RFRC10-A, ERX15-A) employ a switch that will automatically deactivate the Controller within not more than 5 seconds of being released.
